From the Editor

This issue of The Journal presents, for the first time in English, the complete text of Adolf Hitler's December 11, 1941 speech to the Reichstag. This important document, in which the German dictator proclaimed to the world his reasons for going to war against the United States, has long been withheld from the American people. It is telling that almost fifty years after America's entry into the Second World War the great majority of even educated Americans have scant inkling as to the facts of the months-long, one-sided naval war America waged against Germany on the high seas before December 7, 1941 (even as the U.S. was sending massive shipments of arms and supplies to the British and Soviet empires). It should also be stressed that Roosevelt's admirers among Establishment historians have long admitted that Roosevelt cynically deceived the American people and violated both American and international law in goading Germany into war, conduct these historians have praised highly. The Journal is proud to publish Mark Weber's expert translation of Hitler's historic speech.

Suppression of history is also the game in Canada, where Ernst Zündel has been twice tried and convicted for selling a Revisionist examination of the Holocaust. Robert Faurisson, the guiding spirit of the Zündel defense, presents a superb summary of the gains for historical scholarship which have resulted in the Canadian government's clumsy efforts at censoring the truth.

Friedrich P. Berg offers a thoroughly documented study of German efforts to battle typhus during the Second World War, and how anti-typhus measures have been distorted and falsified into the lie of a gas-chamber "Holocaust" of the European Jews. Berg's work is of vital importance in the second stage of Holocaust Revisionism: after showing what didn't happen in the German-occupied East, establishing what did occur.

Dr. Charles Weber provides a timely review of Ingrid Weckert's Feuerzeichen, a German-language Revisionist study of "Reichskristallnacht," of which we have all heard so much lately. IHR hopes to publish an English translation of this important book in the coming year.

This issue of The Journal is rounded out with important new information on Simon Wiesenthal's reliability about his activities during the Second World War, a tantalizing disclosure about Soviet propagandist Ilya Ehrenburg, and a courageous letter written by the inimitable George Bernard Shaw in 1945. There is also a memorial tribute to Dr. Karl Otto Braun, a staunch friend of Historical Revisionism and the Institute for Historical Review, who passed away last summer.

—Theodore J. O'Keefe
The Reichstag Speech
of 11 December 1941

Hitler's Declaration of War
Against the United States

It has often been said that Hitler's greatest mistakes were his decisions to go to war against the Soviet Union and the United States. Whatever the truth may be, it's worth noting his own detailed justifications for these grave decisions.

On Thursday afternoon, 11 December 1941, four days after the Japanese attack on Pearl Harbor, Hitler spoke to the Reichstag in Berlin. The 88-minute address, which he had written himself, was broadcast to the nation. In it the German leader recounted the reasons for the outbreak of war in September 1939, explained why he decided to strike against the Soviet Union in June 1941, reviewed the dramatic course of the war thus far, and dealt at length with President Franklin Roosevelt's hostile policies toward Germany. Hitler detailed the increasingly belligerent actions of Roosevelt's government and then dramatically announced that Germany was now joining Japan in war against the United States.

The day after it was delivered, a very inaccurate and misleading translation of portions of the address appeared in the New York Times. But although it should be of particular interest to Americans, a complete text of this important historical document has apparently never before been made available to the English-speaking world.

This translation is my own, as are the brief clarifications given in brackets.

Following the speech, I have included Germany's formal note to the U.S. government declaring war and a short list of items for suggested further reading.

—Mark Weber
Deputies! Men of the German Reichstag!

A year of world-historical events is coming to an end. A year of great decisions is approaching. In this grave period I speak to you, deputies of the Reichstag, as the representatives of the German nation. In addition, the entire German nation should also review what has happened and take note of the decisions required by the present and the future.

After the repeated rejection of my peace proposal in 1940 by the British Prime Minister [Churchill] and the clique that supports and controls him, it was clear by the fall of that year that this war would have to be fought through to the end, contrary to all logic and necessity.

You, my old Party comrades, know that I have always detested half-hearted or weak decisions. If Providence has deemed that the German people are not to be spared this struggle, then I am thankful that She has entrusted me with the leadership in a historic conflict that will be decisive in determining the next five hundred or one thousand years, not only of our German history, but also of the history of Europe and even of the entire world.

The German people and its soldiers work and fight today not only for themselves and their own age, but also for many generations to come. A historical task of unique dimensions has been entrusted to us by the Creator which we are now obliged to carry out.

The western armistice which was possible shortly after the conclusion of the conflict in Norway [in June 1940] compelled the German leadership, first of all, to militarily secure the most important political, strategic and economic areas that had been won. Consequently, the defense capabilities of the lands which were conquered at that time have changed.

From Kirkenes [in northern Norway] to the Spanish frontier stretches the most extensive belt of great defense installations and fortresses. Countless air fields have been built, including some in the far north which were blasted out of granite. The number and strength of the protected submarine shelters that defend naval bases are such that they are practically impregnable from both the sea and the air. They are defended by more than one and a half thousand gun battery emplacements, which had to be surveyed, planned and built. A network of roads and rail lines has been laid out so that the lines of communication between the Spanish frontier and Petsamo [in the far North] can be defended independently from the sea. The installations built by the Pioneer and construction battalions of the navy, army and air force in cooperation with the Todt Organization are not at all inferior to those of the Westwall [along the German frontier with France]. The work to further strengthen all this continues without pause. I am determined to make this European front impregnable against any enemy attack.
This defensive work, which continued during the past winter, was complemented by military offensives insofar as seasonal conditions permitted. German naval forces above and below the waves continued their steady war of annihilation against the navy and merchant marine of the British and their subservient allies. Through reconnaissance flights and air attacks, the German air force helps to destroy enemy shipping and in countless retaliation air attacks to give the British a better idea of the reality of the so-called "exciting war" which is the creation, above all, of the current British Prime Minister [Churchill].

Germany was supported in this struggle during the past summer above all by its Italian ally. For many months our ally Italy bore on its shoulders the main weight of a large part of British might. Only because of the enormous superiority in heavy tanks were the British able to bring about a temporary crisis in North Africa, but by 24 March of this past year a small combined force of German and Italian units under the command of General [Erwin] Rommel began a counterattack.

Agedabia fell on 2 April. Benghazi was reached on the 4th. Our combined forces entered Derna on the 8th, Tobruk was encircled on the 11th, and Bardia was occupied on 12 April. The achievement of the German Afrika Korps is all the more outstanding because this field of battle is completely alien and unfamiliar to the Germans, climatically and otherwise. As once in Spain [1936-1939], so now in North Africa, Germans and Italians stand together against the same enemy. While these daring actions were again securing the North African front with the blood of German and Italian soldiers, the threatening clouds of terrible danger were gathering over Europe.

Compelled by bitter necessity, I decided in the fall of 1939 to at least try to create the prerequisite conditions for a general peace by eliminating the acute tension between Germany and Soviet Russia [with the German-Soviet non-aggression pact of 23 August 1939]. This was psychologically difficult because of the basic attitude towards Bolshevism of the German people and, above all, of the [National Socialist] Party. Objectively, though, this was a simple matter because in all the countries that Britain said were threatened by us and which were offered military alliances, Germany actually had only economic interests.

I may remind you, deputies and men of the German Reichstag, that throughout the spring and summer of 1939 Britain offered military alliances to a number of countries, claiming that Germany intended to invade them and rob them of their freedom. However, the German Reich and its government could assure them with a clear conscience that these insinuations did not correspond to the truth in any way. Moreover, there was the sober military realization that in case of a war which might be forced upon the German nation
by British diplomacy, the struggle could be fought on two fronts only with very great sacrifices. And after the Baltic states, Rumania and so forth were inclined to accept the British offers of military alliance and thereby made clear that they also believed themselves to be threatened [by Germany], it was not only the right but also the duty of the German Reich government to delineate the [geographical] limits of German interests [between Germany and the USSR].

All the same, the countries involved realized very quickly—which was unfortunate for the German Reich as well—that the best and strongest guarantee against the [Soviet] threat from the East was Germany. Thus, when these countries, on their own initiative, cut their ties with the German Reich and instead put their trust in promises of aid from a power [Britain] which, in its proverbial egotism, has for centuries never given help but has always demanded it, they were lost. All the same, the fate of these countries aroused the strongest sympathy of the German people. The winter war of the Finns [against the USSR, 1939-1940] aroused in us a feeling of admiration mixed with bitterness: admiration because, as a soldierly nation, we have a sympathetic heart for heroism and sacrifice, and bitterness because our concern for the enemy threat in the West and the danger in the East meant that we were not in a position to help. When it became clear to us that Soviet Russia concluded that the [German-Soviet] delineation of political spheres of influence [in August 1939] gave it the right to practically exterminate foreign nations, the [German-Soviet] relationship was maintained only for utilitarian reasons, contrary to reason and sentiment.

Already in 1940 it became increasingly clear from month to month that the plans of the men in the Kremlin were aimed at the domination, and thus the destruction, of all of Europe. I have already told the nation of the build-up of Soviet Russian military power in the East during a period when Germany had only a few divisions in the provinces bordering Soviet Russia. Only a blind person could fail to see that a military build-up of unique world-historical dimensions was being carried out. And this was not in order to protect something that was being threatened, but rather only to attack that which seemed incapable of defense.

The quick conclusion of the campaign in the West [May-June 1940] meant that those in power in Moscow were not able to count on the immediate exhaustion of the German Reich. However, they did not change their plans at all, but only postponed the timing of their attack. The summer of 1941 seemed like the ideal moment to strike. A new Mongol invasion was ready to pour across Europe. Mr. Churchill also promised that there would be a change in the British war against Germany at this same time. In a cowardly way, he now tries to deny that during a secret meeting in the British
House of Commons in 1940 he said that an important factor for the successful continuation and conclusion of this war would be the Soviet entry into the war, which would come during 1941 at the latest, and which would also make it possible for Britain to take the offensive. Conscious of our duty, we observed the military build-up of a world power this last spring which seemed to have inexhaustible reserves of human and material resources. Dark clouds began to gather over Europe.

What is Europe, my deputies? There is no geographical definition of our continent, but only a racial [volkliche] and cultural one. The frontier of this continent is not the Ural mountains, but rather the line that divides the Western outlook on life from that of the East.

At one time, Europe was confined to the Greek isles, which had been reached by Nordic tribes, and where the flame first burned which slowly but steadily enlightened humanity. And when these Greeks fought against the invasion of the Persian conquerors, they did not just defend their own small homeland, which was Greece, but [also] that concept which is now Europe. And then [the spirit of] Europe shifted from Hellas to Rome. Roman thought and Roman statecraft combined with Greek spirit and Greek culture. An empire was created, the importance and creative power of which has never been matched, much less surpassed, even to this day. And when the Roman legions defended Italy in three terrible wars against the attack of Carthage from Africa, and finally battled to victory, in this case as well Rome fought not just for herself, but [also] for the Greco-Roman world which then encompassed Europe.

The next invasion against the home soil of this new culture of humanity came from the wide expanses of the East. A horrific storm of cultureless hordes sprang from the center of Asia deep into the heart of the European continent, burning, ravaging and murdering as a true scourge of God. Roman and Germanic men fought together for the first time on the Catalaunian battle fields in a decisive conflict [451 A.D.] of tremendous importance for a culture which had begun with the Greeks, passed on to the Romans, and then encompassed the Germanic peoples. Europe had matured. The Occident arose from Hellas and Rome, and for many centuries its defense was the task not only of the Romans, but above all of the Germanic peoples.

What we call Europe is the geographic territory of the Occident, enlightened by Greek culture, inspired by the powerful heritage of the Roman empire, its territory enlarged by Germanic colonization. Whether it was the German emperors fighting back invasions from the East by the Unstrut or on the Lechfeld [near Augsburg, in 955], or others pushing back Africa from Spain over a period of many years, it was always a struggle of a developing Europe against a profoundly alien outside world.

Just as Rome once made her immortal contribution to the building
and defense of the continent, so now have the Germanic peoples taken up the defense and protection of a family of nations which, although they may differ and diverge in their political structure and goals, nevertheless together constitute a racially and culturally unified and complementary whole.

And from this Europe there have not only been settlements in other parts of the world, but intellectual [geistig] and cultural fertilization as well, a fact which anyone realizes who is willing to acknowledge the truth rather than deny it. Thus, it was not England which cultivated the continent, but rather Anglo-Saxon and Norman branches of the Germanic nation from our continent which moved to the [British] island and made possible her development, which is certainly unique in history. In the same way, it was not America that discovered Europe, but the other way around. And all that which America did not get from Europe may seem worthy of admiration to a Jewified mixed race, but Europe regards that merely as symptomatic of decay in artistic and cultural life, the product of Jewish or Negroid blood mixture.

My Deputies! Men of the German Reichstag!

I have to make these remarks because this struggle, which became obviously unavoidable in the early months of this year, and which the German Reich, above all, is called upon this time to lead, also greatly transcends the interests of our own people and nation. When the Greeks once stood against the Persians, they defended more than just Greece. When the Romans stood against the Carthaginians, they defended more than just Rome. When the Roman and Germanic peoples stood together against the Huns, they defended more than just the West. When German emperors stood against the Mongols they defended more than just Germany. And when Spanish heroes stood against Africa, they defended not just Spain, but all of Europe as well. In the same way, Germany does not fight today just for itself, but for our entire continent.

And it is an auspicious sign that this realization is today so deeply rooted in the subconscious of most European nations that they participate in this struggle, either with open expressions of support or with streams of volunteers.

When the German and Italian armies took the offensive against Yugoslavia and Greece on the 6th of April of this year, that was the prelude to the great struggle in which we now find ourselves. That is because the revolt in Belgrade [on 26 March 1941] which led to the overthrow of the former prince regent and his government determined the further development of events in that part of Europe. Although Britain played a major role in that coup, Soviet Russia played the main role. What I had refused to Mr. Molotov [the Soviet Foreign Minister] during his visit to Berlin [in November 1940], Stalin believed he could obtain indirectly against our will by
revolutionary activity. Without regard for the treaties they had signed, the Bolshevik rulers expanded their ambitions. The [Soviet] treaty of friendship with the new revolutionary regime [in Belgrade] showed very quickly just how threatening the danger had become.

The achievements of the German armed forces in this campaign were honored in the German Reichstag on 4 May 1941. At that time, though, I was not able to reveal that we were very quickly approaching a confrontation with a state [Soviet Russia] which did not attack at the time of the campaign in the Balkans only because its military build-up was not yet complete and because it was not able to use its air fields as a result of the mud from melting snow at this time of year which made it impossible to use the runways.

My Deputies! Men of the Reichstag!

When I became aware of the possibility of a threat to the east of the Reich in 1940 through [secret] reports from the British House of Commons and by observations of Soviet Russian troop movements on our frontiers, I immediately ordered the formation of many new armored, motorized and infantry divisions. The human and material resources for them were abundantly available. [In this regard] I can make only one promise to you, my deputies, and to the entire German nation: while people in democratic countries understandably talk a lot about armaments, in National Socialist Germany all the more will actually be produced. It has been that way in the past, and it is not any different now. Whenever decisive action has to be taken, we will have more and, above all, better quality weapons with each passing year.

We realized very clearly that under no circumstances could we allow the enemy the opportunity to strike first into our heart. Nevertheless, the decision in this case [to attack the USSR] was a very difficult one. When the writers for the democratic newspapers now declare that I would have thought twice before attacking if I had known the strength of the Bolshevik adversaries, they show that they do not understand either the situation or me.

I have not sought war. To the contrary, I have done everything to avoid conflict. But I would forget my duty and my conscience if I were to do nothing in spite of the realization that a conflict had become unavoidable. Because I regarded Soviet Russia as a danger not only for the German Reich but for all of Europe, I decided, if possible, to give the order myself to attack a few days before the outbreak of this conflict.

A truly impressive amount of authentic material is now available which confirms that a Soviet Russian attack was intended. We are also sure about when this attack was to take place. In view of this danger, the extent of which we are perhaps only now truly aware, I can only thank the Lord God that He enlightened me in time and has given me the strength to do what must be done. Millions of German
soldiers may thank Him for their lives, and all of Europe for its existence.

I may say this today: If this wave of more than 20,000 tanks, hundreds of divisions, tens of thousands of artillery pieces, along with more than 10,000 airplanes, had not been kept from being set into motion against the Reich, Europe would have been lost.

Several nations have been destined to prevent or parry this blow through the sacrifice of their blood. If Finland [for example] had not immediately decided, for the second time, to take up weapons, then the comfortable bourgeois life of the other Nordic countries would have been quickly ended.

If the German Reich, with its soldiers and weapons, had not stood against this opponent, a storm would have burned over Europe which would have eliminated once and for all time the laughable British idea of the European balance of power in all its intellectual paucity and traditional stupidity.

If the Slovaks, Hungarians and Rumanians had not also acted to defend this European world, then the Bolshevik hordes would have poured over the Danube countries as did once the swarms of Attila's Huns, and [Soviet] Tatars and Mongols would [then] force a revision of the Treaty of Montreux [of July 1936] on the open country by the Ionian Sea.

If Italy, Spain and Croatia had not sent their divisions, then a European defense front would not have arisen which proclaims the concept of a new Europe and thereby effectively inspires all other nations as well. Because of this awareness of danger, volunteers have come from northern and western Europe: Norwegians, Danes, Dutch, Flemish, Belgians and even French. They have all given the struggle of the allied forces of the Axis the character of a European crusade, in the truest sense of the word.

This is not yet the right time to speak of the planning and direction of this campaign. However, in a few sentences I would like to say something about what has been achieved [so far] in this greatest conflict in history. Because of the enormous area involved as well as the number and size of the events, individual impressions may be lost and forgotten.

The attack began at dawn on 22 June [1941]. With dauntless daring, the frontier fortifications which were meant to protect the Soviet Russian build-up against us from surprise attack were broken through. Grodno fell by 23 June. On 24 June, following the capture of Brest-Litovsk, the fortress [there] was taken in combat, and Vilnius and Kaunas [in Lithuania] were also taken. Daugavpils [in Latvia] fell on 26 June.

The first two great encirclement battles near Bialystok and Minsk were completed on 10 July. We captured 324,000 prisoners of war, 3,332 tanks and 1,809 artillery pieces. By 13 July the Stalin Line had
been broken through at almost every decisive place. Smolensk fell on 16 July after heavy fighting, and German and Rumanian units were able to force their way across the Dniester [River] on 19 July. The Battle of Smolensk ended on 6 August after many encircling operations. As a result, another 310,000 Russians were taken as prisoners. Moreover, 3,205 tanks and 3,120 artillery pieces were counted—either destroyed or captured. Just three days later the fate of another Soviet Russian army group was sealed. On 9 August in the battle of Uman, another 103,000 Soviet Russian prisoners of war were taken, and 317 tanks and 1,100 artillery pieces were either destroyed or captured.

Nikolayev [in the Ukraine] fell on 13 August, and Kherson was taken on the 21st. On the same day the battle near Gomel ended, resulting in 84,000 prisoners as well as 144 tanks and 848 artillery pieces either captured or destroyed. The Soviet Russian positions between the Ilmen and Peipus [Lakes] were broken through on 21 August, while the bridgehead around Dnepropetrovsk fell into our hands on 26 August. On the 28th of that month German troops entered Tallinn and Paldiski [Estonia] after heavy fighting, while the Finns took Vyborg on the 20th. With the capture of Petrorepost on 8 September, Leningrad was finally cut off from the south. By 16 September bridgeheads across the Dnieper were formed, and on 18 September Poltava fell into the hands of our soldiers. German units stormed the fortress of Kiev on 19 September, and on 22 September the conquest of [the Baltic island of] Saaremaa was crowned by the capture of its capital.

The battle near Kiev was completed on 27 September. Endless columns of 665,000 prisoners of war marched to the west. In the encircled area, 884 tanks and 3,178 artillery pieces were captured.

The battle to break through the central area of the Eastern front began on 2 October, while the battle of the Azov Sea was successfully completed on 11 October. Another 107,000 prisoners, 212 tanks and 672 artillery pieces were counted. After heavy fighting, German and Rumanian units were able to enter Odessa on 16 October. The battle to break through the center of the Eastern front that had begun on 2 October ended on 18 October with a success that is unique in world history. The result was 663,000 prisoners, as well as 1,242 tanks and 5,452 artillery pieces that were either destroyed or captured. The capture of Dagoe was completed on 21 October. The industrial center of Kharkov was taken on 24 October. After very heavy fighting, the Crimea was finally reached, and on 2 November the capital of Simferopol was stormed. On 16 November the Crimea was overrun as far as Kerch.

As of 1 December, the total number of captured Soviet Russian prisoners was 3,806,865. The number of destroyed or captured tanks was 21,391, of artillery pieces 32,541, and of airplanes 17,322.
During this same period of time, 2,191 British airplanes were shot down. The navy sank 4,170,611 gross registered tons of shipping, and the air force sank 2,346,180 tons. Altogether, 6,516,791 gross registered tons were destroyed.

My Deputies! My German people!

These are sober facts and, perhaps, dry figures. But may they never be forgotten by history or vanish from the memory of our own German nation! For behind these figures are the achievements, sacrifices and sufferings, the heroism and readiness to die of millions of the best men of our own people and of the countries allied with us. Everything had to be fought for at the cost of health and life, and through struggle such as those back in the homeland can hardly imagine.

They have marched endless distances, tortured by heat and thirst, often bogged down with despair in the mud of bottomless dirt roads, exposed to the hardships of a climate that varies between the White and Black Seas from the intense heat of July and August days to the winter storms of November and December, tormented by insects, suffering from dirt and pests, freezing in snow and ice, they fought—the Germans and the Finns, the Italians, Slovaks, Hungarians, Rumanians and Croatians, the volunteers from the northern and western European countries—in short, the soldiers of the Eastern front!

Today I will not single out specific branches of the armed forces or praise specific leaders—they have all done their best. And yet, truth and justice requires that something be mentioned again: As in the past, so also today, of all of our German fighting men in uniform, the greatest burden of battle is born by our ever-present infantry soldiers.

From 22 June to 1 December [1941], the German army has lost in this heroic struggle: 158,773 dead, 563,082 wounded and 31,191 missing. The air force has lost: 3,231 dead, 8,453 wounded and 2,028 missing. The navy: 310 dead, 232 wounded and 115 missing. For the German armed forces altogether: 162,314 dead, 571,767 wounded and 33,334 missing.

That is, the number of dead and wounded is somewhat more than double the number of those lost in the [four month long] battle of the Somme of the [First] World War [in 1916], but somewhat less than half the number of missing in that battle—all the same, fathers and sons of our German people.

And now let me speak about another world which is represented by a man [President Franklin Roosevelt] who likes to chat nicely at the fireside while nations and their soldiers fight in snow and ice: above all, the man who is primarily responsible for this war.

When the nationality problem in the former Polish state was growing ever more intolerable in 1939, I attempted to eliminate the
unendurable conditions by means of a just agreement. For a certain
time it seemed as if the Polish government was seriously considering
giving its approval to a reasonable solution. I may also add here that
in all of these German proposals, nothing was demanded which had
not previously belonged to Germany. In fact, we were willing to give
up much which had belonged to Germany before the [First] World
War.

You will recall the dramatic events of that period—the steadily
increasing numbers of victims among the ethnic Germans [in
Poland]. You, my deputies, are best qualified to compare this loss of
life with that of the present war. The military campaign in the East
has so far cost the entire German armed forces about 160,000 deaths,
whereas during just a few months of peace [in 1939] more than
62,000 ethnic Germans were killed, including some who were
horribly tortured. There is no question that the German Reich had
the right to protest against this situation on its border and to press
for its elimination, if for no other reason than for its own security,
particularly since we live in an age in which [some] other countries
[notably, the USA and Britain] regard their security at stake even in
foreign continents. In geographical terms, the problems to be
resolved were not very important. Essentially they involved Danzig
[Gdansk] and a connecting link between the torn-away province of
East Prussia and the rest of the Reich. Of much greater concern were
the brutal persecutions of the Germans in Poland. In addition, the
other minority population groups [notably the Ukrainians] were
subject to a fate that was no less severe.

During those days in August [1939], when the Polish attitude
steadily hardened, thanks to Britain's blank check of unlimited
backing, the German Reich was moved to make one final proposal.
We were prepared to enter into negotiations with Poland on the
basis of this proposal, and we verbally informed the British
ambassador of the proposal text. Today I would like to recall that
proposal and review it with you.

[Text of the German proposal of 29 August 1939:]

Proposal for a settlement of the Danzig-Corridor problem and the
German-Polish minority question:

The situation between the German Reich and Poland is now such
that one more incident could lead to action by the military forces
which have taken position on both sides of the frontier. Any peaceful
solution must be such that the basic causes of this situation are
eliminated so that it does not simply repeat itself, which would mean
that not only eastern Europe but other areas as well would be subject
to the same tensions. The causes of this situation are rooted in, first,
the intolerable border that was specified by the dictated peace of
Versailles [of 1919], and, second, the intolerable treatment of the minority populations in the lost territories.

In making this proposal, the German Reich government is motivated by the desire to achieve a permanent solution which will insure that both sides have vitally important connecting roads, and which will solve the minority problem, insofar as that is possible, and if not, will at least insure a tolerable life for the minority populations with secure guarantees of their rights. The German Reich government is convinced that it is absolutely necessary to acknowledge the economic and physical destruction that has occurred since 1918 and to completely compensate for it. Of course, it regards this obligation as binding on both sides.

On the basis of these considerations, we make the following practical proposals:

1. The Free City of Danzig returns immediately to the German Reich on the basis of its purely German character and the unanimous desire of its population.

2. The territory of the so-called [Polish] Corridor will decide for itself whether it wishes to belong to Germany or to Poland. This territory consists of the area between the Baltic Sea [in the north] to a line marked [in the south] by the towns of Marienwerder, Graudenz, Kulm and Bromberg—including these towns—and then westwards to Schoenlanke.

3. For this purpose a plebiscite will be conducted in this territory. All Germans who lived in this territory on 1 January 1918 or were born there before that date are entitled to vote in the plebiscite. Similarly, all Poles, Cashubians, and so forth, who lived in this territory on that date or were born there before that date are also entitled to vote. Those Germans who were expelled from this territory will return to vote in the plebiscite.

To insure an objective plebiscite and to make sure that all necessary preliminary preparation work is completely carried out, this territory will come under the authority of an international commission, similar to the one organized in the Saar territory. This commission is to be organized immediately by the four great powers of Italy, the Soviet Union, France and Britain. This commission will have all sovereign authority in the territory. Accordingly, Polish soldiers, Polish police and Polish authorities are to clear out of this territory as soon as possible, by a date to be agreed upon.

4. This territory does not include the Polish harbor of Gdynia, which is regarded as fundamentally sovereign Polish territory, to the extent of [ethnic] Polish settlement. The specific border of this Polish harbor city will be negotiated by Germany and Poland and, if necessary, determined by an international court of arbitration.
5. In order to insure sufficient time for the preparations necessary in order to conduct a just plebiscite, the plebiscite will not take place until after at least 12 months have passed.

6. In order to guarantee unhindered traffic between Germany and East Prussia, and between Poland and the [Baltic] Sea during this period [before the plebiscite], roads and rail lines may be built to insure free transit. The only tolls that may be imposed are those necessary for the maintenance of the transit routes or for transport itself.

7. A simple majority of the votes cast will decide whether the territory will go to Germany or to Poland.

8. After the plebiscite has been conducted, and regardless of the result, free transit will be guaranteed between Germany and its province of Danzig-East Prussia, as well as between Poland and the [Baltic] Sea. If the plebiscite determines that the territory belongs to Poland, Germany will obtain an extraterritorial transit zone, consisting of an auto super-highway [Reichsautobahn] and a four-track rail line, approximately along the line of Buetow-Danzig and Dirschau. The highway and the rail line will be built in such a way that the Polish transit lines are not disturbed, which means that they will pass either above or underneath. This zone will be one kilometer wide and will be sovereign German territory. In case the plebiscite is in Germany's favor, Poland will have free and unrestricted transit to its harbor of Gdynia with the same right to an extraterritorial road and rail line that Germany would have.

9. In case the Corridor returns to Germany, the German Reich declares that it is ready to carry out an exchange of population with Poland to the extent that this would be suitable for the Corridor.

10. The special rights desired by Poland in the harbor of Danzig will also be given to Germany in the harbor of Gdynia on the basis of parity.

11. In order to eliminate all fear of threat from either side, Danzig and Gdynia will be purely commercial centers, that is, with no military installations or military fortifications.

12. The peninsula of Hela, which will go to either Poland or Germany on the basis of the plebiscite, will also be demilitarized in any case.

13. The German Reich government has protested in the strongest terms against the Polish treatment of its minority populations. For its part, the Polish government also believes itself called upon to register protests against Germany. Accordingly, both sides agree to submit these complaints to an international investigation commission which will be responsible for investigating all
complaints of economic and physical damage as well as other acts of terror.

Germany and Poland pledge to compensate for all economic and other harm inflicted on minority populations on both sides since 1918, or to annul all expropriations and provide for complete reparation for the victims of these and other economic measures.

14. In order to eliminate the feeling of deprivation of international rights of the Germans who will remain in Poland, as well as of the Poles who will remain in Germany, and above all, to insure that they are not forced to act contrary to their ethnic-national feelings, Germany and Poland agree to guarantee the rights of the minority populations on both sides through comprehensive and binding agreements. These will insure the right of these minority groups to maintain, freely develop and carry on their national-cultural life. In particular, they will be allowed to maintain organizations for these purposes. Both sides agree that members of their minority populations will not be drafted for military service.

15. If agreement is reached on the basis of these proposals, Germany and Poland declare that they will immediately order and carry out the demobilization of their armed forces.

16. Germany and Poland will agree to whatever measures are necessary to implement the above points as quickly as possible.

[End of the text of the German proposal]

The former Polish government refused to respond to these proposals in any way. In this regard, the question presents itself: How is it possible that such an unimportant state could dare to simply disregard such proposals and, in addition, carry out further cruelties against the Germans, the people who have given this land its entire culture, and even order the general mobilization of its armed forces?

A look at the documents from the [Polish] Foreign Ministry in Warsaw later provided the surprising explanation. They told of the role of a man [Roosevelt] who, with diabolical lack of principle, used all of his influence to strengthen Poland's resistance and to prevent any possibility of understanding. These reports were sent by the former Polish ambassador in Washington, Count [Jerzy] Potocki, to his government in Warsaw. These documents clearly and shockingly reveal the extent to which one man and the powers behind him are responsible for the Second World War.

Another question arises: Why had this man [Roosevelt] developed such a fanatic hostility against a country which, in its entire history, had never harmed either America or him?

With regard to Germany's relationship with America, the following should be said:
1. Germany is perhaps the only great power which has never had a colony in either North or South America. Nor has it been otherwise politically active there, apart from the emigration of many millions of Germans with their skills, from which the American continent, and particularly the United States, has only benefited.

2. In the entire history of the development and existence of the United States, the German Reich has never been hostile or even politically unfriendly towards the United States. To the contrary, many Germans have given their lives to defend the USA.

3. The German Reich has never participated in wars against the United States, except when the United States went to war against us in 1917. It did so for reasons which were completely explained by a commission which President Roosevelt himself established [or rather, endorsed] to investigate this issue. [This was the special U.S. Senate investigating committee, 1934-1935, chaired by Sen. Gerald Nye.] This commission to investigate the reasons for America's entry into the [First World] war clearly established that the United States entered the war in 1917 solely for the capitalist interests of a small group, and that Germany itself had no desire or intention to come into conflict with America.

Furthermore, there are no territorial or political conflicts between the American and German nations which could possibly involve the existence or even the [vital] interests of the United States. The forms of government have always been different. But this cannot be a reason for hostility between different nations, as long as one form of government does not try to interfere with another, outside of its naturally ordained sphere.

America is a republic led by a president with wide-ranging powers of authority. Germany was once ruled by a monarchy with limited authority, and then by a democracy which lacked authority. Today it is a republic of wide-ranging authority. Between these two countries is an ocean. If anything, the differences between capitalist America and Bolshevik Russia, if these terms have any meaning at all, must be more significant than those between an America led by a President and a Germany led by a Fuehrer.

It is a fact that the two historical conflicts between Germany and the United States were stimulated by two Americans, that is, by Presidents Woodrow Wilson and Franklin Roosevelt, although each was inspired by the same forces. History has given its verdict about Wilson. His name will always be associated with the most base betrayal of a pledge [Wilson's "14 points"] in history. The result was the disruption of national life, not only in the so-called vanquished countries, but among the victors as well. Because of this broken pledge, which alone made the imposed Treaty of Versailles [1919] possible, countries were torn apart, cultures were destroyed and the
economic life of all was ruined. Today we know that a group of self-serving financiers stood behind Wilson. They used this paralytic professor in order to lead America into a war from which they hoped to profit. The German nation once believed this man, and had to pay for this faith with political and economic ruin.

After such a bitter experience, why is there now another American president who is determined to incite wars and, above all, to stir up hostility against Germany to the point of war? National Socialism came to power in Germany in the same year that Roosevelt came to power in the United States [1933]. At this point it is important to examine the factors behind the current developments.

First of all, the personal side of things: I understand very well that there is a world of difference between my own outlook on life and attitude, and that of President Roosevelt. Roosevelt came from an extremely wealthy family. By birth and origin he belonged to that class of people which is privileged in a democracy and assured of advancement. I myself was only the child of a small and poor family, and I had to struggle through life by work and effort in spite of immense hardships.

As a member of the privileged class, Roosevelt experienced the [First] World War in a position under Wilson's shadow [as assistant secretary of the Navy]. As a result, he only knew the agreeable consequences of a conflict between nations from which some profited while others lost their lives. During this same period, I lived very differently. I was not one of those who made history or profits, but rather one of those who carried out orders. As an ordinary soldier during those four years, I tried to do my duty in the face of the enemy. Of course, I returned from the war just as poor as when I entered in the fall of 1914. I thus shared my fate with millions of others, while Mr. Roosevelt shared his with the so-called upper ten thousand.

After the war, while Mr. Roosevelt tested his skills in financial speculation in order to profit personally from the inflation, that is, from the misfortune of others, I still lay in a military hospital along with many hundreds of thousands of others. Experienced in business, financially secure and enjoying the patronage of his class, Roosevelt then finally chose a career in politics. During this same period, I struggled as a nameless and unknown man for the rebirth of my nation, which was the victim of the greatest injustice in its entire history.

Two different paths in life! Franklin Roosevelt took power in the United States as the candidate of a thoroughly capitalistic party, which helps those who serve it. When I became the Chancellor of the German Reich, I was the leader of a popular national movement, which I had created myself. The powers which supported Mr.
Roosevelt were the same powers that I fought against out of deepest inner conviction and because of the fate of my people. The “brain trust” which served the new American president was made up of members of the same national group which we fought against in Germany as a parasitical expression of humanity, and which we began to remove from public life.

And yet, we also had something in common: Franklin Roosevelt took control of a country with an economy which had been ruined as a result of democratic influences, and I assumed the leadership of a Reich which was also on the edge of complete ruin, thanks to democracy. There were 13 million unemployed in the United States, while Germany had seven million unemployed and another seven million part-time workers. In both countries, public finances were in chaos, and it seemed that the spreading economic depression could not be stopped.

From then on, things developed in the United States and in the German Reich in such a way that future generations will have no difficulty in making a definitive evaluation of the two different socio-political theories. Whereas the German Reich experienced an enormous improvement in social, economic, cultural and artistic life in just a few years under National Socialist leadership, President Roosevelt was not able to bring about even limited improvements in his own country. This task should have been much easier in the United States, with barely 15 people per square kilometer, as compared to 140 in Germany. If economic prosperity is not possible in that country, it must be the result of either a lack of will by the ruling leadership or the complete incompetence of the men in charge. In just five years, the economic problems were solved in Germany and unemployment was eliminated. During this same period, President Roosevelt enormously increased his country's national debt, devalued the dollar, further disrupted the economy and maintained the same number of unemployed.

But this is hardly remarkable when one realizes that the intellects appointed by this man, or more accurately, who appointed him, are members of that same group who, as Jews, are interested only in disruption and never in order. While we in National Socialist Germany took measures against financial speculation, it flourished tremendously under Roosevelt. The New Deal legislation of this man was spurious, and consequently the greatest error ever experienced by anyone. If his economic policies had continued indefinitely during peace time, there is no doubt that sooner or later they would have brought down this president, in spite of all his dialectical cleverness. In a European country his career would certainly have ended in front of a national court for recklessly squandering the nation's wealth. And he would hardly have avoided a prison
sentence by a civil court for criminally incompetent business management.

Many respected Americans also shared this view. A threatening opposition was growing all around this man, which led him to think that he could save himself only by diverting public attention from his domestic policies to foreign affairs. In this regard it is interesting to study the reports of Polish Ambassador Potocki from Washington, which repeatedly point out that Roosevelt was fully aware of the danger that his entire economic house of cards could collapse and that therefore he absolutely had to divert attention to foreign policy.

The circle of Jews around Roosevelt encouraged him in this. With Old Testament vindictiveness they regarded the United States as the instrument which they and he could use to prepare a second Purim [slaughter of enemies] against the nations of Europe, which were increasingly anti-Jewish. So it was that the Jews, in all of their satanic baseness, gathered around this man, and he relied on them.

The American president increasingly used his influence to create conflicts, intensify existing conflicts, and, above all, to keep conflicts from being resolved peacefully. For years this man looked for a dispute anywhere in the world, but preferably in Europe, that he could use to create political entanglements with American economic obligations to one of the contending sides, which would then steadily involve America in the conflict and thus divert attention from his own confused domestic economic policies.

His actions against the German Reich in this regard have been particularly blunt. Starting in 1937, he began a series of speeches, including a particularly contemptible one on 5 October 1937 in Chicago, with which this man systematically incited the American public against Germany. He threatened to establish a kind of quarantine against the so-called authoritarian countries. As part of this steady and growing campaign of hate and incitement, President Roosevelt made another insulting statement [on 15 Nov. 1938] and then called the American ambassador in Berlin back to Washington for consultations. Since then the two countries have been represented only by charges d'affaires.

Starting in November 1938, he began to systematically and consciously sabotage every possibility of a European peace policy. In public he hypocritically claimed to be interested in peace while at the same time he threatened every country that was ready to pursue a policy of peaceful understanding by blocking credits, economic reprisals, calling in loans, and so forth. In this regard, the reports of the Polish ambassadors in Washington, London, Paris and Brussels provide a shocking insight.

This man increased his campaign of incitement in January 1939. In a message to the U.S. Congress [of 4 Jan. 1939] he threatened to take every measure short of war against the authoritarian countries.
He repeatedly claimed that other countries were trying to interfere in American affairs and he talked a lot about upholding the Monroe Doctrine. Starting in March 1939 he began lecturing about internal European affairs which were no concern of the President of the United States. In the first place, he doesn't understand these problems, and secondly, even if he did understand them and appreciated the historical circumstances, he has no more right to concern himself with central European affairs than the German head of state has to take positions on or make judgments about conditions in the United States.

Mr. Roosevelt went even beyond that. Contrary to the rules of international law, he refused to recognize governments he didn't like, would not accept new ones, refused to dismiss ambassadors of non-existent countries, and even recognized them as legal governments. He went so far as to conclude treaties with these ambassadors, which then gave him the right to simply occupy foreign territories [Greenland and Iceland].

On 15 April 1939 Roosevelt made his famous appeal to me and the Duce [Mussolini], which was a mixture of geographical and political ignorance combined with the arrogance of a member of the millionaire class. We were called upon to make declarations and to conclude non-aggression pacts with a number of countries, many of which were not even independent because they had either been annexed or turned into subordinate protectorates by countries allied with Mr. Roosevelt [Britain and France]. You will recall, my Deputies, that I then gave a polite but straightforward answer to this obtrusive gentleman [on 28 April 1939], which succeeded in stopping, at least for a few months, the storm of chatter from this staunch warmonger.

But now the honorable wife [Eleanor Roosevelt] took his place. She and her sons [she said] refused to live in a world such as ours. That is at least understandable, for ours is world of work and not one of deceit and racketeering. After a short rest, though, he was back at it. On 4 November 1939 the Neutrality Act was revised and the arms embargo was repealed in favor of a one-sided supply [of weapons] to Germany's adversaries. In the same way in eastern Asia, he pushed for economic entanglements with China which would eventually lead to effective common interests. That same month he recognized a small group of Polish emigrants as a so-called government in exile, the only political basis of which was a few million Polish gold pieces which were taken away from Warsaw.

On 9 April [1940] he froze all Norwegian and Danish assets [in the United States] on the lying pretext of wanting to keep them from falling into German hands, even though he knew full well, for example, that Germany has not interfered with, much less taken control of, the Danish government's administration of its financial
affairs. Along with the other governments in exile, Roosevelt now recognized one for Norway. On 15 May 1940, Dutch and Belgian governments in exile were also recognized, and at the same time Dutch and Belgian assets [in the USA] were frozen.

This man revealed his true attitude in a telegram of 15 June [1940] to French Premier [Paul] Reynaud. Roosevelt told him that the American government would double its aid to France, on the condition that France continue the war against Germany. In order to give special emphasis to his desire that the war continue, he declared that the American government would not recognize acquisitions brought about by conquest, which included, for example, the retaking of territories which had been stolen from Germany. I do not need to emphasize that now and in the future, the German government will not be concerned about whether or not the President of the United States recognizes a border in Europe. I mention this case because it is characteristic of the systematic incitement of this man, who hypocritically talks about peace while at the same time he incites to war.

And now he feared that if peace were to come about in Europe, the billions he had squandered on military spending would soon be recognized as an obvious case of fraud, because no one would attack America unless America itself provoked the attack. On 17 June 1940 the President of the United States froze French assets [in the USA] in order, so he said, to keep them from being seized by Germany, but in reality to get hold of the gold that was being brought from Casablanca on an American cruiser.

In July 1940 Roosevelt began to take many new measures towards war, such as permitting the service of American citizens in the British air force and the training of British air force personnel in the United States. In August 1940 a joint military policy for the United States and Canada was established. In order to make the establishment of a joint American-Canadian defense committee plausible to at least the stupidest people, Roosevelt periodically invented crises and acted as if America was threatened by immediate attack. He would suddenly cancel trips and quickly return to Washington and do similar things in order to emphasize the seriousness of the situation to his followers, who really deserve pity.

He moved still closer to war in September 1940 when he transferred fifty American naval destroyers to the British fleet, and in return took control of military bases on British possessions in North and Central America. Future generations will determine the extent to which, along with all this hatred against socialist Germany, the desire to easily and safely take control of the British empire in its hour of disintegration may have also played a role.

After Britain was no longer able to pay cash for American
deliveries, he imposed the Lend-Lease Act on the American people [in March 1941]. As President, he thereby obtained the authority to furnish lend-lease military aid to countries which he, Roosevelt, decided it was in America's vital interests to defend. After it became clear that Germany would not respond under any circumstances to his continued boorish behavior, this man took another step forward in March 1941.

As early as 19 December 1939, an American cruiser within the safety zone [the Tuscaloosa] maneuvered the [German] passenger liner Columbus into the hands of British warships. As a result, it had to be scuttled. On the same day, US military forces helped in an effort to capture the German merchant ship Arauca. Again contrary to international law, on 27 January 1940 the US cruiser Trenton reported the movements of the German merchant ships Arauca, La Plata and Wangoni to enemy naval forces.

On 27 June 1940 he announced a limitation on the free movement of foreign merchant ships in US harbors, completely contrary to international law. In November 1940 he permitted US warships to pursue the German merchant ships Phrygia, Idarwald and Rhein until they finally had to scuttle themselves to keep from falling into enemy hands. On 13 April 1941 American ships were permitted to pass freely through the Red Sea in order to supply British armies in the Middle East.

In the meantime, all German ships were confiscated by the American authorities in March [1941]. In the process, German Reich citizens were treated in the most degrading way, ordered to certain locations in violation of international law, put under travel restrictions, and so forth. Two German officers who had escaped [to the United States] from Canadian captivity were shackled and returned to the Canadian authorities, likewise completely contrary to international law.

On 27 March [1941] the same president who is [supposedly] against all aggression announced support for [General Dusan] Simovic and his clique of usurpers, who had come to power in Belgrade [Yugoslavia] after the overthrow of the legal government. Several months earlier, President Roosevelt had sent [OSS chief] Colonel Donovan, a very inferior character, to the Balkans with orders to help organize an uprising against Germany and Italy in Sofia [Bulgaria] and Belgrade. In April he [Roosevelt] promised lend-lease aid to Yugoslavia and Greece. At the end of April he recognized Yugoslav and Greek emigrants as governments in exile. And once again, in violation of international law, he froze Yugoslav and Greek assets.

Starting in mid-April [1941] US naval patrols began expanded operations in the western Atlantic, reporting their observations to the British. On 26 April, Roosevelt delivered twenty P.T. boats to
Britain. At the same time, British naval ships were routinely being repaired in US harbors. On 12 May, Norwegian ships operating for Britain were armed and repaired [in the USA], contrary to international law. On 4 June, American troop transports arrived in Greenland to build air fields. And on 9 June came the first British report that a US war ship, acting on orders from President Roosevelt, had attacked a German submarine near Greenland with depth charges.

On 14 June, German assets in the United States were frozen, again in violation of international law. On 17 June, on the basis of a lying pretext, President Roosevelt demanded the recall of the German consuls and the closing of the German consulates. He also demanded the closing down of the German "Transocean" press agency, the German Library of Information [in New York] and the German Reichsbahn [national railway] office.

On 6 and 7 July [1941], American armed forces acting on orders from Roosevelt occupied Iceland, which was in the area of German military operations. He hoped that this action would certainly, first, finally force Germany into war [against the USA] and, second, also neutralize the effectiveness of the German submarines, much as in 1915-1916. At the same time, he promised military aid to the Soviet Union. On 10 July, Navy Secretary [Frank] Knox suddenly announced the existence of an American order to fire against Axis warships. On 4 September the US destroyer Greer, acting on orders, operated together with British airplanes against German submarines in the Atlantic. Five days later, a German submarine identified US destroyers as escort vessels with a British convoy.

In a speech delivered on 11 September [1941], Roosevelt at last personally confirmed that he had given the order to fire against all Axis ships, and he repeated the order. On 29 September, US patrols attacked a German submarine east of Greenland with depth charges. On 17 October the US destroyer Kearny, operating as an escort for the British, attacked a German submarine with depth charges, and on 6 November US armed forces seized the German ship Odenwald in violation of international law, took it to an American harbor, and imprisoned its crew.

I will overlook as meaningless the insulting attacks and rude statements by this so-called President against me personally. That he calls me a gangster is particularly meaningless, since this term did not originate in Europe, where such characters are uncommon, but in America. And aside from that, I simply cannot feel insulted by Mr. Roosevelt because I regard him, like his predecessor Woodrow Wilson, as mentally unsound [geisteskrank].

We know that this man, with his Jewish supporters, has operated against Japan in the same way. I don't need to go into that here. The same methods were used in this case as well. This man first incites
to war, and then he lies about its causes and makes baseless allegations. In an offensive way, he wraps himself in a cloak of Christian hypocrisy, while at the same time slowly but very steadily leading humanity into war. And finally, as an old Freemason, he calls upon God as his witness that his actions are honorable.

His shameless misrepresentations of truth and violations of law are unparalleled in history. I am sure that all of you have regarded it as an act of deliverance that a country [Japan] has finally acted to protest against all this in the very way that this man had actually hoped for, and which should not surprise him now [the Pearl Harbor attack of 7 December 1941]. After years of negotiating with this deceiver, the Japanese government finally had its fill of being treated in such a humiliating way. All of us, the German people and, I believe, all other decent people around the world as well, regard this with deep appreciation.

We know the power behind Roosevelt. It is the same eternal Jew that believes that his hour has come to impose the same fate on us that we have all seen and experienced with horror in Soviet Russia. We have gotten to know the Jewish paradise on earth first hand. Millions of German soldiers have personally seen the land where this international Jewry has destroyed and annihilated people and property. Perhaps the President of the United States does not understand this. If so, that only speaks for his intellectual narrow-mindedness.

But we know that their entire effort is aimed at this goal: Even if we were not allied with Japan, we would still realize that the Jews and their Franklin Roosevelt intend to destroy one country after another. The German Reich of today has nothing in common with the Germany of the past. For our part, we will now do what this provocateur has been trying to achieve for years. And not just because we are allied with Japan, but rather because Germany and Italy with their present leaderships have the insight and strength to realize that in this historic period the existence or non-existence of nations is being determined, perhaps for all time. What this other world has in store for us is clear. They were able to bring the democratic Germany of the past [1918-1933] to starvation, and they seek to destroy the National Socialist Germany of today.

When Mr. Churchill and Mr. Roosevelt declare that they want to build a new social order later on, that's about the same as a barber with a bald head recommending a tonic guaranteed to make hair grow. These gentlemen, who live in the most socially backward countries, should worry about their own unemployed people rather than incite war. They have enough misery and poverty in their own countries to keep themselves busy insuring a just distribution of food there. As far as the German nation is concerned, it doesn't need charity from either Mr. Churchill, Mr. Roosevelt or [British foreign
secretary] Mr. Eden, but it does demand its rights. And it will do what it must to insure its right to life, even if a thousand Churchills and Roosevelts conspire together to prevent it.

Our nation has a history of almost 2,000 years. Never in this long period has it been so united and determined as it is today, and thanks to the National Socialist movement it will always be that way. At the same time, Germany has perhaps never been as clear-sighted and seldom as conscious of honor. Accordingly, today I had the passports returned to the American charge d'affaires, and he was informed of the following:

President Roosevelt's steadily expanding policy has been aimed at an unlimited world dictatorship. In pursuing this goal, the United States and Britain have used every means to deny the German, Italian and Japanese nations the prerequisites for their vital natural existence. For this reason, the governments of Britain and the United States of America have opposed every effort to create a new and better order in the world, for both the present and the future.

Since the beginning of the war [in September 1939], the American President Roosevelt has steadily committed ever more serious crimes against international law. Along with illegal attacks against ships and other property of German and Italian citizens, there have been threats and even arbitrary deprivations of personal freedom by internment and such. The increasingly hostile attacks by the American President Roosevelt have reached the point that he has ordered the American navy to immediately attack, fire upon and sink all German and Italian ships, in complete violation of international law. American officials have even boasted about destroying German submarines in this criminal manner. American cruisers have attacked and captured German and Italian merchant ships, and their peaceful crews were taken away to imprisonment. In addition, President Roosevelt's plan to attack Germany and Italy with military forces in Europe by 1943 at the latest was made public in the United States [by the Chicago Tribune and several other papers on 4 Dec. 1941], and the American government made no effort to deny it.

Despite the years of intolerable provocations by President Roosevelt, Germany and Italy sincerely and very patiently tried to prevent the expansion of this war and to maintain relations with the United States. But as a result of his campaign, these efforts have failed.

Faithful to the provisions of the Tripartite Pact of 27 September 1940, German and Italy have consequently now finally been forced to join together on the side of Japan in the struggle for the defense and preservation of the freedom and independence of our nations and empires against the United States of America and Britain.
The three powers have accordingly concluded the following agreement, which was signed today in Berlin:

[Agreement text:]

With an unshakable determination not to lay down arms until the common war against the United States of America and Britain has been fought to a successful conclusion, the German, Italian and Japanese governments have agreed to the following:

Article 1. Germany, Italy and Japan will together conduct the war which has been forced upon them by the United States of America and Britain with all the means at their command to a victorious conclusion.

Article 2. Germany, Italy and Japan pledge not to conclude an armistice or make peace with either the United States of America or Britain unless by complete mutual agreement.

Article 3. Germany, Italy and Japan will also work very closely together after a victorious conclusion of the war for the purpose of bringing about a just new order in accord with the Tripartite Pact concluded by them on 27 September 1940.

Article 4. This agreement is effective immediately upon signing and is valid for the same period as the Tripartite Pact of 27 September 1940. The high contracting parties shall inform each other in due time before the expiration of this term of validity of their plans for cooperation as laid out in Article 3 of this agreement.

[End of Agreement text]

Deputies! Men of the German Reichstag!

Ever since my peace proposal of July 1940 was rejected, we have clearly realized that this struggle must be fought through to the end. We National Socialists are not at all surprised that the Anglo-American, Jewish and capitalist world is united together with Bolshevism. In our country we have always found them in the same community. Alone we successfully fought against them here in Germany, and after 14 years of struggle for power we were finally able to annihilate our enemies.

When I decided 23 years ago to enter political life in order to lead the nation up from ruin, I was a nameless, unknown soldier. Many of you here know just how difficult those first years of that struggle really were. The way from a small movement of seven men to the taking of power on 30 January 1933 as the responsible government is so miraculous that only the blessing of Providence could have made it possible. Today I stand at the head of the mightiest army in the world, the most powerful air force and a proud navy. Behind and around me is a sacred community—the [National Socialist] Party, with which I have become great and which has become great through me.
Our opponents today are the same familiar enemies of more than 20 years. But the path before us cannot be compared with the road we have already taken. Today the German people fully realizes that this is a decisive hour for our existence. Millions of soldiers are faithfully doing their duty under the most difficult conditions. Millions of German farmers and workers, and German women and girls, are in the factories and offices, in the fields and farm lands, working hard to feed our homeland and supply weapons to the front. Allied with us are strong nations which have suffered the same misery and face the same enemies.

The American President and his plutocratic clique have called us the “have not” nations. That is correct! But the “have nots” also want to live, and they will certainly make sure that what little they have to live on is not stolen from them by the “haves.”

You, my Party comrades, know of my relentless determination to carry out to a successful conclusion any struggle which has already begun. You know of my determination in such a struggle to do everything necessary to break all resistance that must be broken. In my first speech [of this war] on 1 September 1939, I pledged that neither force of arms nor time would defeat Germany. I want to assure my opponents that while neither force of arms nor time will defeat us, in addition no internal uncertainty will weaken us in the fulfillment of our duty.

When we think of the sacrifice and effort of our soldiers, then every sacrifice of [those here in] the homeland is completely insignificant and unimportant. And when we consider the number of all those in past generations who gave their lives for the survival and greatness of the German nation, then we are really conscious of the magnitude of the duty which is ours.

But whoever tries to shirk this duty has no right to be regarded as a fellow German. Just as we were pitilessly hard in the struggle for power, so also will we be just as ruthless in the struggle for the survival of our nation. During a time in which thousands of our best men, the fathers and sons of our people, have given their lives, anyone in the homeland who betrays the sacrifice on the front will forfeit his life. Regardless of the pretext with which an attempt is made to disrupt the German front, undermine the will to resist of our people, weaken the authority of the regime, or sabotage the achievements of the homeland, the guilty person will die. But with this difference: The soldier at the front who makes this sacrifice will be held in the greatest honor, whereas the person who debases this sacrifice of honor will die in disgrace.

Our opponents should not deceive themselves. In the 2,000 years of recorded German history, our people have never been more determined and united than today. The Lord of the universe has been so generous to us in recent years that we bow in gratitude
before a Providence which has permitted us to be members of such a
great nation. We thank Him, that along with those in earlier and
coming generations of the German nation, our deeds of honor may
also be recorded in the eternal book of German history!

Germany's Formal Declaration of War
Against the United States

About two hours before Hitler began his speech to the Reichstag,
Germany formally declared war against the United States when Reich
Foreign Minister Joachim von Ribbentrop delivered a diplomatic note
to the American Charge d'Affaires in Berlin, Leland B. Morris.

At almost the same time, the German Charge d'Affaires in
Washington, Hans Thomsen, presented a copy of this note to the Chief
of the European Division of the Department of State, Ray Atherton.
Here is the text of the note:

The government of the United States of America, having violated
in the most flagrant manner and in ever increasing measure all rules
of neutrality in favor of the adversaries of Germany and having
continually been guilty of the most severe provocations toward
Germany ever since the outbreak of the European war, brought on
by the British declaration of war against Germany on 3 September
1939, has finally resorted to open military acts of aggression.

On 11 September 1941, the President of the United States of
America publicly declared that he had ordered the American Navy
and Air Force to shoot on sight any German war vessel. In his
speech of 27 October 1941, he once more expressly affirmed that this
order was in force.

Acting under this order, American war vessels have systematically
attacked German naval forces since early September 1941. Thus,
American destroyers, as for instance, the Greer, the Kearny and the
Reuben James, have opened fire on German submarines according
to plan. The American Secretary of the Navy, Mr. Knox, himself
confirmed that the American destroyers attacked German
submarines.

Furthermore, the naval forces of the United States of America,
under order of their government and contrary to international law,
have treated and seized German merchant ships on the high seas as
enemy ships.

The German government therefore establishes the following facts:
Although Germany on her part has strictly adhered to the rules of
international law in her relations with the United States of America
during every period of the present war, the government of the
United States of America from initial violations of neutrality has
finally proceeded to open acts of war against Germany. It has thereby virtually created a state of war.

The government of the Reich consequently breaks off diplomatic relations with the United States of America and declares that in these circumstances brought about by President Roosevelt, Germany too, as from today, considers herself as being in a state of war with the United States of America.

On May 13, 1988, Ernst Zündel was sentenced by Judge Ronald Thomas of the District Court of Ontario, in Toronto, to nine months in prison for having distributed a Revisionist booklet that is now 14 years old: *Did Six Million Really Die?*

Ernst Zündel lives in Toronto where, up until a few years ago, he worked as a graphic artist and advertising man. He is now 49 years old. A native of Germany, he has kept his German citizenship. His life has known serious upsets from the day when, in about 1981, he began to distribute *Did Six Million Really Die?*, a Revisionist booklet by Richard Harwood. The booklet was first published in 1974 in Great Britain where, a year later, it was the focus of a lengthy controversy in the literary journal *Books and Bookmen*. At the instigation of the Jewish community of South Africa, it was later banned in that country.

In Canada, during an earlier trial in 1985, Zündel had been sentenced to 15 months in prison. That sentence was thrown out in 1987. A new trial began on January 18, 1988. I participated in the preparations for it and in the unfolding of those judicial proceedings. I devoted thousands of hours to the defense of Ernst Zündel.

**François Duprat: A Precursor**

In 1967, François Duprat published an article on “The Mystery of the Gas Chambers” (*Défense de l’Occident*, June 1967, pp. 30-33). He later became interested in the Harwood booklet and became actively involved in its distribution. On March 18, 1978, he was killed by assassins armed with weapons too complex not to belong to an
intelligence service. Responsibility for the assassination was claimed by a “Remembrance Commando” and by a “Jewish Revolutionary Group” (Le Monde, March 23, 1978, p. 7). Patrice Chairoff had published Duprat’s home address in the Dossier Néo-Nazisme. He justified the assassination in the pages of Le Monde (April 26, 1978, p. 9) by citing the victim’s Revisionism: “Francois Duprat is responsible. There are some responsibilities that kill.” In Le Droit de vivre, the publication of the LICRA (International League Against Racism and Anti-Semitism), Jean Pierre-Bloch expressed an ambiguous position: he criticized the crime but, at the same time, he let it be understood that he had no pity for those who, inspired by the victim, would start out on the Revisionist path (Le Monde, May 7-8, 1978).

Pierre Viansson-Ponté

Eight months before Duprat’s assassination, journalist Pierre Viansson-Ponté had launched a virulent attack against the Harwood pamphlet. His chronicle was entitled: “Le Mensonge” (The Lie), (Le Monde, July 17-18, 1978, p. 13). It was reprinted with an approving commentary in Le Droit de vivre. Six months after the assassination, Viansson-Ponté took up the attack once more in “Le Mensonge” (suite) (The Lie-Continued) (Le Monde, September 3-4, 1978, p. 9). He passed over the assassination of Duprat in silence, made public the names and home towns of three Revisionist readers, and called for legal repression against Revisionism.

Sabina Citron Versus Ernst Zündel

In 1984, Sabina Citron, head of the Holocaust Remembrance Association, stirred up violent demonstrations against Ernst Zündel in Canada. An attack was made on Zündel’s home. The Canadian postal service, treating Revisionism the way it treats pornography, refused him all service and all right to receive mail. Zündel only recovered his postal rights after a year of judicial procedures. In the meantime, his business has failed. At the instigation of Sabina Citron, the Attorney General of Ontario filed a complaint against Zündel for publishing a “false statement, tale or news.” The charge was based on the following reasoning: the defendant had abused his right to freedom of expression; by distributing the Harwood pamphlet, he was spreading information that he knew was false; in fact, he could not fail to be aware that the “genocide of the Jews” and the “gas chambers” were an established fact. Zündel was also charged with publishing an allegedly “false” letter, which he had written himself.

The First Trial (1985)

The first trial lasted seven weeks. The jury found Zündel not guilty regarding the letter he had himself written but guilty of distributing
The Ziindel Trials (1985 and 1988)

The Harwood booklet. He was sentenced by Judge Hugh Locke to 15 months in prison. The German consulate in Toronto confiscated his passport and the West German government prepared a deportation action against him. In Germany itself, West German authorities had already carried out a series of large-scale police raids on the houses of all his German correspondents. In 1987, the United States forbade him entry to its territory. But in spite of all that, Zündel had won a media victory: day after day, for seven weeks, the entire English-speaking Canadian media covered the trial, with its spectacular revelations. The public learned that the Revisionists had first class documentation and arguments, while the Exterminationists were in desperate straits.

**Their Expert: Raul Hilberg**

The prosecution expert in the first trial was Raul Hilberg, an American professor of Jewish descent and author of the standard reference work, *The Destruction of the European Jews* (1961), which Paul Rassinier discussed in *Le Drame des Juifs européens* (The Drama of the European Jews). Hilberg began his testimony by explaining, without interruption, his theory about the extermination of the Jews. He was then cross-examined by Zündel's lawyer, Douglas Christie, who was assisted by Keltie Zubko and myself. Right from the start it was clear that Hilberg, who was the world's leading authority on the Holocaust, had never examined a single concentration camp, not even Auschwitz. He had still not examined any camp in 1985 when he announced the imminent appearance of a new edition of his main work in three volumes, revised, corrected and augmented. Although he did visit Auschwitz in 1979 for a single day as part of a ceremonial appearance, he did not bother to examine either the buildings or the archives. In his entire life he has never seen a "gas chamber," either in its original condition or in ruins. (For a historian, even ruins can tell tales). On the stand he was forced to admit that there had never been a plan, a central organization, a budget or supervision for what he called the policy of the extermination of the Jews. He also had to admit that since 1945 the Allies have never carried out an expert study of "the weapon of the crime," that is to say of a homicidal gas chamber. No autopsy report has established that even one inmate was ever killed by poison gas.

Hilberg said that Hitler gave orders for the extermination of the Jews, and that Himmler gave an order to halt the extermination on November 25, 1944 (such detail!). But Hilberg could not produce these orders. The defense asked him if he still maintained the existence of the Hitler orders in the new edition of his book. He dared to answer yes. He thereby lied and even committed perjury. In the new edition of his work (with a preface dated September 1984),
Hilberg systematically deleted any mention of an order by Hitler. (In this regard, see the review by Christopher Browning, "The Revised Hilberg," Simon Wiesenthal Center Annual, 1986, p. 294). When he was asked by the defense to explain how the Germans had been able to carry out an undertaking as enormous as the extermination of millions of Jews without any kind of plan, without any central agency, without any blueprint or budget, Hilberg replied that in the various Nazi agencies there had been "an incredible meeting of minds, a consensus mind-reading by a far-flung bureaucracy."

**Witness Arnold Friedman**

The prosecution counted on the testimony of "survivors." These "survivors" were chosen with care. They were supposed to testify that they had seen, with their own eyes, preparations for and the carrying out of homicidal gassings. Since the war, in a series of trials like those at Nuremberg (1945-46), Jerusalem (1961), or Frankfurt (1963-65), such witnesses have never been lacking. However, as I have often noted, no lawyer for the defense had ever had the courage or the competence necessary to cross-examine these witnesses on the gassings themselves.

For the first time, in Toronto in 1985, one lawyer, Douglas Christie, dared to ask for explanations. He did it with the help of topographical maps and building plans as well as scholarly documentation on both the properties of the gases supposedly used and also on the capacities for cremation, whether carried out in crematory ovens or on pyres. Not one of these witnesses stood the test, and especially not Arnold Friedman. Despairing of his case, he ended by confessing that he had indeed been at Auschwitz-Birkenau (where he never had to work except once, unloading potatoes), but that, as regards gassings, he had relied on what others had told him.

**Witness Rudolf Vrba**

Witness Rudolf Vrba was internationally known. A Slovak Jew, imprisoned at Auschwitz and at Birkenau, he said that he had escaped from the camp in April 1944 with Fred Wetzler. After getting back to Slovakia, he dictated a report about Auschwitz and Birkenau, and on their crematories and "gas chambers."

With help from Jewish organizations in Slovakia, Hungary and Switzerland, his report reached Washington, where it served as the basis for the U.S. Government's famous "War Refugee Board Report," published in November 1944. Since then every Allied organization charged with the prosecution of "war crimes" and every Allied prosecutor in a trial of "war criminals" has had available this official version of the history of those camps.

Vrba later became a British citizen and published his
autobiography under the title of *I Cannot Forgive*. This book, published in 1964, was actually written by Alan Bestic, who, in his preface, testified to the "considerable care [by Rudolf Vrba] for each detail" and to the "meticulous and almost fanatic respect he revealed for accuracy." On November 30, 1964, Vrba testified at the Frankfurt Auschwitz trial. Then he settled in Canada and became a Canadian citizen. He has been featured in various films about Auschwitz, particularly *Shoah* by Claude Lanzmann. Everything went well for him until the day at the Zündel trial in 1985 when he was cross-examined mercilessly. He was then shown to be an impostor. It was revealed that he had completely made up the number and location of the "gas chambers" and the crematories in his famous 1944 report. His 1964 book opened with a purported January 1943 visit by Himmler to Birkenau to inaugurate a new crematorium with "gas chamber." Actually, the last visit by Himmler to Auschwitz took place in July of 1942, and in January 1943 the first of the new crematories was still far from finished.

Thanks, apparently, to some special gift of memory (that he called "special mnemonic principles" or "special mnemonical method") and to a real talent for being everywhere at once, Vrba had calculated that in the space of 25 months (April 1942 to April 1944) the Germans had "gassed" 1,765,000 Jews at Birkenau alone, including 150,000 Jews from France. But in 1978, Serge Klarsfeld, in his *Memorial to the Deportation of the Jews from France*, had been forced to conclude that, for the entire length of the war, the Germans had deported a total of 75,721 Jews from France to all their concentration camps. The gravest aspect of this is that the figure of 1,765,000 Jews "gassed" at Birkenau had also been used in a document (L-022) at the main Nuremberg trial. Attacked on all sides by Zündel's lawyer, the impostor had no other recourse than to invoke, in Latin, the "licentia poetarum," or "poetic license," in other words, the right to engage in fiction. His book has just been published in France (1987); this edition is presented as a book by "Rudolf Vrba with Alan Bestic." It no longer includes the enthusiastic preface by Alan Bestic, and the short introduction by Emile Copfermann notes that "with the approval of Rudolf Vrba the two appendices from the English edition have been removed." Nothing is said about the fact that those two appendices had also caused Vrba serious problems in 1985 at the Toronto trial.

**The Second Zündel Trial (1988)**

In January 1987, a five-judge appeals court decided to throw out the 1985 verdict against Ernst Zündel for some very basic reasons: Judge Hugh Locke had not allowed the defense any influence in the jury selection process and the jury had been misled by the judge on the very meaning of the trial. As for me, I have attended many trials
in my life, including some carried out in France during the period of
the "Purge" at the end and after World War II. Never have I
encountered a judge so partial, autocratic and violent as Judge Hugh
Locke. Anglo-Saxon law offers many more guarantees than French
law but it only takes one man to pervert the best of systems. Judge
Locke was such a man.

The second trial began on January 18, 1988, under the direction of
Judge Ronald Thomas, who is a friend, it seems, of Judge Locke.
Judge Thomas was often angry and was frankly hostile to the
defense, but he had more finesse than his predecessor. The ruling by
the five-judge appeal court also inhibited him somewhat. Judge
Hugh Locke had imposed numerous restrictions on free expression
by the witnesses and experts for the defense. For example, he
forbade me to use any of the photos I had taken at Auschwitz. I had
no right to use arguments of a chemical, cartographical, or
architectural nature (even though I had been the first person in the
world to publish the plans for the Auschwitz and Birkenau
crematories). I was not allowed to talk about either the American gas
chambers or the aerial reconnaissance photos of Auschwitz and
Birkenau. Even the testimony of the eminent chemist William
Lindsey was cut short. Judge Ronald Thomas did allow the defense
more freedom, but at the outset of the trial, he made a decision, at the
request of the prosecution, that would tie the hands of the jury.

Judge Thomas's Judicial Notice

In Anglo-Saxon law, everything must be proved except for certain
absolutely indisputable evidence ("The capital of Great Britain is
London," "day follows night"...). The judge can take "judicial notice"
of that kind of evidence at the request of one or the other of the
contending parties.

Prosecuting Attorney John Pearson asked the judge to take judicial
notice of the Holocaust. That term then has to be defined. It is likely
that, had it not been for the intervention of the defense, the judge
could have defined the Holocaust as it might have been defined in
1945-46. At that time, the "genocide of the Jews" (the word
"Holocaust" was not used) could have been defined as "the ordered
and planned destruction of six million Jews, in particular by the use
of gas chambers."

The problem for the prosecution was that the defense advised the
defense judge that, since 1945-46, there have been profound changes in the
understanding of Exterminationist historians about the
extermination of the Jews. First of all, they no longer talk about an
extermination but about an attempted extermination. They have also
finally admitted that "in spite of the most scholarly research"
(Raymond Aron, Sorbonne Convention, 2 July 1982), no one has
found any trace of an order to exterminate the Jews. More recently,
there has been a dispute between the “intentionalists” and the “functionalists.” Both agree that they have no proof of any intent to exterminate, but “intentionalist” historians nevertheless believe that one must assume the existence of that intent, while “functionalist” historians believe that the extermination was the result of individual initiatives, localized and anarchic: in a sense, the activity created the organization! Finally, the figure of six million was declared to be “symbolic” and there have been many disagreements about the “problem of the gas chambers.”

Obviously surprised by this flood of information, Judge Ronald Thomas decided to be prudent and, after a delay for reflection, decided on the following definition: the Holocaust, he said, was “the extermination and/or mass-murder of Jews” by National Socialism. His definition is remarkable for more than one reason. We no longer find any trace of an extermination order, or a plan, or “gas chambers,” or six million Jews or even millions of Jews. This definition is so void of all substance that it no longer corresponds to anything real. One cannot understand the meaning of “mass-murder of Jews.” (The judge carefully avoided saying “of the Jews”.) This strange definition is itself a sign of the progress achieved by Historical Revisionism since 1945.

**Raul Hilberg Refuses to Appear Again**

One misfortune awaited Prosecutor John Pearson: Raul Hilberg, in spite of repeated requests, refused to appear again. The defense, having heard rumors of an exchange of correspondence between Pearson and Hilberg, demanded and got the publication of the letters they exchanged and in particular of a “confidential” letter by Hilberg which did not hide the fact that he had some bitter memories of his cross-examination in 1985. He feared being questioned again by Douglas Christie on the same points. To quote the exact words of his confidential letter, Hilberg wrote that he feared “every attempt to entrap me by pointing out any seeming contradiction, however trivial the subject might be, between my earlier testimony and an answer that I might give in 1988.” In fact as I have already mentioned, Hilberg had committed perjury and he may have feared being charged with that crime.

**Christopher Browning, Prosecution Witness**

In place of Hilberg there came his friend Christopher Browning, an American professor who specializes in the Holocaust. Admitted as an expert witness (and paid for several days at the rate of $150 per hour by the Canadian taxpayer), Browning tried to prove that the Harwood pamphlet was a tissue of lies and that the attempt to exterminate the Jews was a scientifically established fact. He had
cause to regret the experience. During cross-examination, the defense used his own arguments to destroy him. In the course of those days, people saw the tall and naive professor, who had strutted while he stood testifying, seated, shrunken in size, behind the witness stand like a schoolboy caught in a mistake. With a faint and submissive voice, he ended up acknowledging that the trial had definitely taught him something about historical research.

Following the example of Raul Hilberg, Browning had not examined any concentration camps. He had not visited any facility with “gas chambers.” He had never thought of asking for an expert study of the “weapon of the crime.” In his writings he had made much of homicidal “gas vans,” but he was not able to refer to any authentic photograph, any plan, any technical study, or any expert study. He was not aware that German words like “Gaswagen,” “Spezialwagen,” “Entlausungswagen” (delousing van) could have perfectly innocent meanings. His technical understanding was nil. He had never examined the wartime aerial reconnaissance photos of Auschwitz. He was unaware of all the tortures undergone by Germans, such as Rudolf Höss, who had spoken of gassings. He knew nothing of the doubts expressed about some of Himmler's speeches or about the Goebbels diary.

A great follower of the trials of war criminals, Browning had only questioned the prosecutors, never the defense lawyers. His ignorance of the transcript of the Nuremberg trial was disconcerting. He had not even read what Hans Frank, former Governor General of Poland, had said before the Nuremberg tribunal about his “diary” and about “the extermination of the Jews.” That was inexcusable! As a matter of fact, Browning claimed to have found irrefutable proof of the existence of a policy of exterminating the Jews in the Frank diary. He had discovered one incriminating sentence. He did not know that Frank had given the Tribunal an explanation of that kind of sentence, chosen beforehand from the hundreds of thousands of sentences in a personnel and administrative journal of 11,500 pages. Furthermore, Frank had spontaneously turned over his “diary” to the Americans when they came to arrest him. The sincerity of the former Governor General is so obvious to anyone who reads his deposition that Christopher Browning, invited to hear the content, did not raise the least objection. One last humiliation awaited him.

For the sake of his thesis, he invoked a passage from the well-known “protocol” of the Wannsee conference (20 January 1942). He had made his own translation of the passage, a translation that was seriously in error. At that point, his thesis collapsed. Finally, his own personal explanation of a “policy of the extermination of the Jews” was the same as Hilberg’s. Everything was explained by the “nod” of Adolf Hitler. In other words, the Führer of the German people did
not need to give any written or even spoken order for the extermination of the Jews. It was enough for him to give a “nod” at the beginning of the operation and, for the rest, a series of “signals.” And that was understood!

Charles Biedermann

The other expert called by the prosecution (who had taken the stand before Browning) was Charles Biedermann, a Swiss citizen, a delegate of the International Committee of the Red Cross (ICRC) and, most importantly, the director of the International Tracing Service (ITS) in Arolsen, West Germany. The ITS has an unbelievable wealth of information about the fate of individual victims of National Socialism and, in particular, of former concentration camp inmates. I believe that it is at Arolsen that one could determine the real number of Jews who died during the war.

The prosecution did not benefit from this expert’s testimony. On the contrary, the defense scored numerous points on cross-examination. Biedermann recognized that the ICRC had never found any proof of the existence of homicidal gas chambers in the German camps. The visit by one of its delegates to Auschwitz in September 1944 had done no more than conclude the existence of a rumor on that subject. To his embarrassment, the expert was obliged to admit that he was wrong in attributing to the National Socialists the expression “extermination camps.” He had not noticed that this was a term coined by the Allies.

Biedermann said that he was not familiar with the ICRC reports on the atrocities undergone by the Germans just before and just after the end of the war. In particular, he knew nothing about the terrible treatment of many German prisoners. It would seem that the ICRC had nothing about the massive deportations of German minorities from the east, nothing on the horrors of the total collapse of Germany at the very end of the war, nothing about summary executions and, in particular, the massacre by rifle, machine gun, shovels and pickaxes, of 520 German soldiers and officers who had surrendered to the Americans at Dachau on April 29, 1945 (even though Victor Maurer, ICRC delegate, was apparently there).

The International Tracing Service included among those “persecuted” by the Nazis even indisputably criminal prisoners in the concentration camps. He relied on the information supplied by a Communist organization, the “Auschwitz State Museum.” Beginning in 1978, in order to prevent all Revisionist research, the International Tracing Service closed its doors to historians and researchers, except for those bearing a special authorization from one of the ten governments (including that of Israel) which oversee the activity of the International Tracing Service. Henceforth the Tracing Service was forbidden to calculate and publish, as it had
done until then, statistical evaluations of the number of dead in the various camps. The annual activity reports could no longer be made available to the public, except for their first third, which had been of no interest to researchers.

Biedermann confirmed a news story that had filtered out in 1964 at the Frankfurt trial: at the time of liberation of Auschwitz, the Soviets and the Poles had discovered the death register of that complex of 39 camps and sub-camps. The register consisted of 38 or 39 volumes. The Soviets keep 36 or 37 of those volumes in Moscow while the Poles keep two or three other volumes at the "Auschwitz State Museum," a copy of which they have furnished to the International Tracing Service in Arolsen. But neither the Soviets nor the Poles nor the International Tracing Service authorize research in these volumes. Biedermann did not even want to reveal the number of dead counted in the two or three volumes of which the ITS has a copy. It is clear that, if the content of the death register of Auschwitz were made public, it would be the end of the myth of the millions of deaths in the camp.

No "Survivor" Witnesses for the Prosecution

The judge asked the prosecutor if he would call any "survivors" to the witness stand. The prosecutor answered no. The experience of 1985 had been too embarrassing. The cross examination had been devastating. It is regrettable that at the trial of Klaus Barbie in France in 1987 and at the trial of John Demjanjuk in Israel in 1987-1988, no defense lawyer has followed Douglas Christie's example in the first Zündel trial (1985): Christie had shown that by carefully questioning witnesses about the gassing process itself, one could destroy the very foundation of the "extermination camp" myth.

The Witnesses and Experts for the Defense

Most of the witnesses and experts for the defense were as precise and concrete as people like Hilberg or Browning had been imprecise and metaphysical. The Swede Ditlieb Felderer showed about 380 slides of Auschwitz and of the other camps in Poland. The American, Mark Weber, whose knowledge of the documents is impressive, engaged in clarifications of several aspects of the Holocaust, in particular the Einsatzgruppen.* The German Tjudar Rudolph dealt with the Lodz ghetto and visits by the ICRC delegates at the end of 1941 to Auschwitz, Majdanek and other camps.

*Weber also clarified the meaning of the term "Final Solution" (emigration or deportation, but never extermination of Jews): the testimony of Judge Konrad Morgen; the tortures of Rudolf Höss and Oswald Pohl; the true history of Revisionism; and the concessions made year after year by the Exterminationists to the Revisionist viewpoint.
Thies Christophersen had been in charge of an agricultural research enterprise in the Auschwitz region in 1944. He visited the Birkenau camp several times to requisition personnel there and never noticed the horrors usually described. On the witness stand he repeated point by point what he had written about the camp, starting in 1973 with a 19-page report (Kritik, Nr. 23, pp. 14-32).

The Austrian-born Canadian Maria Van Herwaarden was interned at Birkenau starting in 1942. She saw nothing, either close up or from a distance, that resembled mass murder, although she confirmed that many of the inmates had died of typhus. The American Bradley Smith, a member of a “Committee for Open Debate on the Holocaust,” spoke about his experience in more than 100 question-and-answer interviews on American radio and television on the Holocaust issue.

The Austrian Emil Lachout commented on the famous “Müller Document,” which, since December 1987, has thrown the Austrian authorities into disarray. The document, dated October 1, 1948, revealed that even then, Allied commissions of inquiry had already rejected the stories of homicidal “gassings” in a whole series of camps, including Dachau, Ravensbrück, Struthof (Natzweiler), Stutthof (Danzig), Sachsenhausen, and Mauthausen (Austria). The document specifically confirms that confessions of Germans had been extorted by torture and that testimonies by former inmates were false.

Dr. Russell Barton recounted his horrified discovery of the camp at Bergen-Belsen at the time of liberation. Until that moment he had believed in a deliberate program of extermination. Then he noted the fact that, in an apocalyptic Germany, the piles of corpses and the walking skeletons were the result of the frightful conditions of an overcrowded camp, ravaged by epidemics, and almost entirely deprived of medicine, food, and water because of Allied bombings.

The German Udo Walendy outlined the many forgeries he had discovered, in wartime atrocity photographs and other documents, either altered or forged by a team headed by a British propagandist called Sefton Delmer. J.G. Burg, a Jew who lives in Munich, told of his experiences in the war and confirmed that there had never been any policy for the extermination of the Jews by the Nazis.

Academics like the Chinese professor Dr. K.T. Fann, a Marxist, and Dr. Gary Botting, who lost his teaching position at Red Deer College (Alberta) as a result of testifying at the Zündel trial in 1985, testified that the Harwood booklet was essentially a work of opinion, and hence not subject to legal prohibition. Jürgen Neumann, a close associate and friend of Zündel, testified as to Zündel’s “state of mind” when the booklet first was published. Ernst Neilsen testified on the obstacles he encountered at the University of Toronto to open research on the Holocaust. Ivan Lagacé, director of the crematory at
Calgary, demonstrated the practical impossibility of the numbers alleged by Hilberg to have been cremated at Auschwitz.

For my part, I appeared as an expert witness for nearly six days. I concentrated particularly on my investigations of the American gas chambers. I recalled that Zyklon B is essentially hydrocyanic acid and that it is with this gas that certain American penitentiaries execute those who have been condemned to death.

In 1945 the Allies should have asked specialists on American gas chambers to examine the buildings, at Auschwitz and elsewhere, which were supposed to have been used to gas millions of people. Since 1977, I have had the following idea: when one deals with a vast historical problem like that of the reality or the legend of the Holocaust, one must strive to get to the core of the problem. In this case the central problem is Auschwitz and the core of that problem is a space of 275 square meters: the 65 square meters of the "gas chamber" of crematorium I at Auschwitz and, at Birkenau, the 210 square meters of the "gas chamber" of crematorium II. In 1988, my idea remained the same: let us have expert studies of those 275 square meters and we will have an answer to the vast problem of the Holocaust! I showed the jury my photos of the gas chamber at the Maryland State Penitentiary in Baltimore as well as my plans for the Auschwitz gas chambers and I underlined the physical and chemical impossibilities of the latter ones.

**A Sensational Turn of Events: The Leuchter Report**

Ernst Zündel, in possession of the correspondence I had exchanged in 1977-78 with the six American penitentiaries outfitted with gas chambers, gave attorney Barbara Kulaszka the job of getting in touch with the chief wardens of those penitentiaries in order to see if one of them would agree to appear in court to explain how a real gas chamber operates. Bill Armontrout, chief warden of the penitentiary at Jefferson City (Missouri), agreed to testify and in doing so pointed out that no one in the USA was more knowledgable about the functioning of gas chambers than Fred A. Leuchter, an engineer from Boston. I went to visit Leuchter on February 3 and 4, 1988. I found that he had never asked himself any questions about the "gas chambers" in the German camps. He had simply believed in their existence. After I began to show him my files, he became aware of the chemical and physical impossibility of the German "gassings" and he agreed to examine our documents in Toronto.

After that, at Zündel's expense, he left for Poland with a secretary (his wife), a draftsman, a video-cameraman and an interpreter. He came back and drew up a 192-page report (including appendices). He also brought back 32 samples taken, on the one hand, from the crematories of Auschwitz and Birkenau at the site of the homicidal "gassings" and, on the other hand, in a disinfection gas chamber at
Birkenau. His conclusion was simple: there had never been any homicidal gassings at Auschwitz, Birkenau, or Majdanek.

On April 20 and 21, 1988, Fred Leuchter appeared on the witness stand in the Toronto courtroom. He told the story of his investigation and presented his conclusions. I am convinced that during those two days I was an eyewitness to the death of the gas chamber myth, a myth which, in my opinion, had entered its death throes at the Sorbonne colloquium on "Nazi Germany and the Extermination of the Jews" (June 29 to July 2, 1982), where the organizers themselves began to grasp that there was no proof of the existence of the gas chambers.

In the Toronto courtroom emotions were intense, in particular among the friends of Sabina Citron. Ernst Zündel's friends were also moved, but for a different reason: they were witnessing the veil of the great swindle being torn away. As for me, I felt both relief and melancholy: relief because a thesis that I had defended for so many years was at last fully confirmed, and melancholy because I had fathered the idea in the first place. I had even, with the clumsiness of a man of letters, presented physical, chemical, topographical and architectural arguments which I now saw summed up by a scientist who was astonishingly precise and thorough.

Would people one day remember the skepticism I had encountered, even from other Revisionists? Just before Fred Leuchter, Bill Armontrout had been on the witness stand, where he confirmed, in every detail, what I had said to the jury about the extreme difficulties of a homicidal gassing (not to be confused with a suicidal or accidental gassing). Ken Wilson, a specialist in aerial photographs, had shown that the homicidal "gas chambers" of Auschwitz and Birkenau did not have gas evacuation chimneys, which would have been indispensable. He also showed that I had been right in accusing Serge Klarsfeld and Jean-Claude Pressac of falsifying the map of Birkenau in the Auschwitz Album (Seuil Publishers, 1983, p. 42). Those authors, in order to make the reader believe that groups of Jewish women and children surprised by the photographer between crematories II and III could not go any farther and were thus going to end up in the "gas chambers" and those crematories, had simply eliminated from the map the path which, in reality, led up to the "Zentralsauna," a large shower facility (located beyond the zone of the crematories), where those women and children were actually going.

James Roth, director of a laboratory in Massachusetts, then testified on the analysis of the 32 samples, the origin of which he was unaware of: all the samples taken in the homicidal "gas chambers" contained a quantity of cyanide which was either unmeasurable or infinitesimal, while the sample from the disinfection gas chamber, taken for comparison's sake, contained an enormous amount of
cyanide (the infinitesimal quantity detected in the former case can be explained by the fact that the supposed homicidal gas chambers were in fact morgues for preserving bodies; such morgues could have been occasionally disinfected with Zyklon B).

David Irving

The British historian David Irving enjoys great prestige. Zündel thought of asking him to testify, but there was a problem: Irving was only partly a Revisionist. The thesis that he defended, for example, in Hitler's War (New York, The Viking Press, 1977) can be summed up as follows: Hitler never gave an order for the extermination of the Jews; at least up to the end of 1943 he was kept in ignorance of that extermination; only Himmler and a group of about 70 or so persons were aware of it; in October 1944 Himmler, who wanted to get into the good graces of the Allies, gave an order to cease the extermination of the Jews.

I had met Irving in Los Angeles in September of 1983 at the annual convention of the Institute for Historical Review, where I challenged him by asking several questions about proof to support his thesis. Then I published an article entitled “A Challenge to David Irving” in The Journal of Historical Review (Winter 1984, pp. 289-305) and Spring 1985, p. 8 and 122). I tried to convince this brilliant historian that logically he could no longer be satisfied with a semi-Revisionist position. To begin with, I challenged him to produce Himmler's order to stop the extermination, an order which never actually existed. Later on, I learned from various sources that Irving was undergoing a change that moved him in the direction of Revisionism.

In 1988, Zündel became convinced that the British historian was only waiting for a decisive event to take a final step in our direction. After arriving in Toronto, David Irving discovered in rapid succession the Leuchter report and an impressive number of documents that Zündel, his friends and I had accumulated over the course of several years. The last reservations or the last misunderstandings melted away in the course of a meeting. He agreed to testify on the stand. In the opinion of those who were present at the two trials (1985 and 1988), no single testimony, except that of Fred Leuchter, caused such a sensation. For more than three days, David Irving, engaging in a sort of public confession, took back all that he had said about the extermination of the Jews and without reservation adopted the Revisionist position. With courage and honesty, he showed how an historian can be brought to revise profoundly his views on the history of the Second World War.
The Zündel Story

Ernst Zündel had promised that his trial would be “the trial of the Nuremberg Trial” or “the Stalingrad of the Exterminationists.” The unfolding of those two long trials proved him right, even though the jury, “instructed” by the judge to consider the Holocaust as an established fact “which no reasonable person can doubt,” finally found him guilty. Zündel has already won. It remains for him to make it known to Canada and to the entire world. The media blackout of the 1988 trial was almost complete. Jewish organizations campaigned vigorously for such a blackout, and even went so far as to say that they did not want an impartial account of the trial. They did not want any account of it at all. The paradox is that the only publication which reported relatively honestly about the trial was The Canadian Jewish News.

Ernst Zündel and the Leuchter report have left a profound mark on history; both will be remembered for many years to come.
A Powerful Historic Document

THE

LEUCHTER REPORT

(An Engineering Report on the Alleged Execution Gas Chambers at Auschwitz, Birkenau and Majdanek, Poland)

With a foreword by Robert Faurisson

Here, for the first time, is a detailed technical study of the alleged gas chambers of Auschwitz and Majdanek—a study which confirms that they were nothing of the sort!

This is the report which world-renowned Revisionist historian David Irving described as "shattering," and which convinced Irving to change his mind on the Holocaust. The testimony of its author, American engineer Fred Leuchter, rocked the second trial of Ernst Zündel in Toronto, and now you can find out why.

Revisionists such as Robert Faurisson, Fritz Berg, and Ditlieb Felderer had argued convincingly against the likelihood of gassings in the Polish camps, but independent scientific and technical confirmation was still a necessity. An expert in the design and functioning of homicidal gas chambers had to be found and it wasn’t enough to locate such an expert: the person in question had to be brave enough to carry out his investigations in a Communist police state, and then to risk harassment and censure in North America for making his findings public.

Now you can obtain and study this milestone document in a highly readable non-technical, condensed edition. A limited printing of the Leuchter report (with a foreword by Robert Faurisson, the full forensic summary, and the meticulous documentation laying out the evidence) is available to subscribers to The Journal of Historical Review for $20, with part of the proceeds earmarked to Ernst Zündel to enable him to carry on his fight for freedom and historical truth.

The Leuchter report is must reading, and an indispensable reference. No Revisionist library is complete without it.

Order your copy of the Leuchter report today. Supplies are limited! 8½ x 11 Paperback format, $20.
In my article about the German delousing chambers in the Spring 1985 issue of this journal, I included a brief discussion of the large, well-designed gas chambers which were used to fumigate entire railroad trains, one or more railroad cars at a time, with Zyklon-B. Those chambers would have been ideal for the mass-extermination of people if the Germans had ever intended to commit mass-extermination of Jews or anyone else.

At the end of this introductory discussion I have included two articles from the German technical literature which discuss these remarkable gas chambers in some detail. Those articles are only two among many that can be found in the German literature of that period.

**Delousing Tunnels**

The history of large gas chambers (more than 200 cubic meters in volume) goes back to at least the early 1920's, when tunnels were used by the British to fumigate railroad trains in Russia and Poland, when the British had a military presence there during the chaotic post World War I period. The standard procedure then was to fumigate an entire railroad train at one time within a sealed tunnel with hydrocyanic acid (also referred to simply as cyanide or cyanide gas). Zyklon-B had not yet been invented and so the cyanide had to be introduced into the tunnels either from gas-filled tanks or else generated within the tunnels by the dropping of cyanide salt into barrels filled with sulfuric acid (the so-called "barrel method").

The British experience with typhus in Poland and Russia during that period was described many years later in the Proceedings of the Royal Society of Medicine as follows:¹

**Administrative Measures of Control of Widespread Epidemics**

Though the measures taken are not likely to be applicable to Great Britain it may be of interest to outline the broader administrative steps we took when dealing with widespread epidemics of typhus fever.
The personnel of a number of units was established, including doctors, nurses, and subordinate medical auxiliaries. All were young and all were protected by the use of special clothing. Arrangements were made for the regular disinfestation of the garments and for bathing the personnel. The stores required included portable baths and showers, fuel for heating water, soap, hair clippers and scissors, nail brushes, towels, etc., in addition to as good rations as it was possible to obtain. Units were sent into the various regions and were administered centrally in Poland from Warsaw, in Russia from Moscow and Kuibyshev, and, two years ago, in China from Chungking and Sian.

The next step was to put a cordon round healthy areas, with the aid of the military and barbed wire, to prevent the ingress of infected refugees. This was in many cases done locally, though eventually a cordon had to be established right across Europe, from North Poland to Rumania. Refugees were only allowed to enter this “clean” zone at certain points established on the roads and railways. Patrols watched the open country and brought stragglers into the disinfesting points. At each such point were arrangements for bathing and disinfestation, and all persons passing the cordon were thoroughly “de-loused” with their belongings. The size of the work may be gathered from the fact that at one center alone—Baranowice, on the Polish-Russian frontier in 1921—we were for a long time disinfesting each day 10,000 refugees returning to Poland from Russia. The method of disinfestation varied according to the country and the apparatus available. In Poland, steam and cyanide were both used, the latter being employed on an extensive scale on the frontiers. At Baranowice, where the refugees arrived chiefly by train, a tunnel was built, into which hydrocyanic gas could be introduced. On the arrival of each train, all the passengers were given a blanket and told to strip, leaving their garments and all their belongings on the train. Each person was then bathed in hot water with soft soap and paraffin, while the train was backed into the tunnel, the engine uncoupled, and cyanide gas liberated in the tunnel. When the bathing of the refugees was completed, the train was pulled out of the tunnel by means of a rope attached to a locomotive and was allowed to air. In due course the passengers dressed, gave up their blankets, and continued on their journey. In Mesopotamia, we used a locomotive with waggons attached, into which steam, first saturated and superheated, could be passed. The train included accommodation for personnel and thus constituted a unit which could be moved to any point where typhus broke out.

In Russia, we utilized the Russian baths, with which every village is equipped. These are log huts in which fires are made under heaps of stones, which are thus heated to a high temperature. Buckets of water are thrown on the stones, the water immediately evaporating into clouds of steam. The population was first bathed and de-loused in the bath, and then the amount of heat and steam were increased so as to deal with the bedding and clothing. Subsequently, no further water was thrown on the stones, and the heat of the hut was allowed to dry out the material.
For furs, which are very readily infested with lice and which do not lend themselves to the ordinary methods of disinfestation, crude naphthalene was used. A large box or chest was constructed at the entrance to the house and half-filled with crude naphthalene. Into this all furs and outer garments were dropped on entry to the house and left there until the following morning. I should mention that in winter in a cold country it is, of course, sufficient to hang one's garments in the open for the night for every louse to be destroyed. Whether the nits survive or not depends on the degree of cold, but there is in any case no evidence that these can transmit the disease.

In China, where padded garments have to a great extent superseded furs, brick ovens were used...

In spite of the difficulties, the delousing of entire railroad trains was absolutely essential to prevent the spread of typhus from infested areas to non-infested areas. Railroads could otherwise carry typhus-infected lice throughout all of Europe within a few days. Not only the railroad trains themselves but even the railroad stations were important sources of contagious disease, particularly typhus, because it was there that people would spend hours and even days in close contact, often huddled together—an ideal environment for the spreading of lice from “lousy” persons to otherwise clean persons. By contrast, busses, trucks and automobiles were still relatively unimportant for public transportation.

The invention of Zyklon-B in 1923 was a major step forward because delousing methods employing this product could handle furs and leather goods without damage as easily as they could handle all other types of clothing. By the late 1930's (see Appendix A), the delousing of railroads had been greatly improved with specially-constructed delousing tunnels or gas chambers. These facilities were subsequently improved even further with blowers and ductwork to circulate air and gas, and with space heaters to raise interior temperatures above the boiling point of hydrocyanic acid (78.6°F). Heating was especially necessary during winter—precisely the time of the year when typhus was generally most severe and when delousing was most needed—in order to be sure that all of the hydrocyanic acid from Zyklon-B would evaporate and fill the chamber interiors.

**DEGESCH as an Information Source for a Technology of Mass-Murder**

The technology which was employed for fumigating entire railroad trains was hardly a secret. On the contrary, before the war and throughout most of the war, the DEGESCH company had placed large advertisements for its products and technical expertise in many technical journals which were distributed throughout the entire world. Many of these advertisements clearly showed large gas chambers for fumigating railroad trains and trucks with Zyklon-B.
The half-page advertisement which follows appeared in dozens of issues of Der praktische Desinfektor just as an example.  

Any German official seriously interested in using Zyklon-B for almost any purpose would have been well aware of this superb technology. The people responsible for the "Final Solution," about whom it is generally conceded that they were otherwise intelligent and in many cases well-educated, would have surely read the German technical literature also. Any German official responsible for the purchase of large quantities of Zyklon-B would have surely seen the DEGESCH advertisements, not just once but many times, showing large, well-designed gas chambers about which numerous technical discussions could be easily found.

The importance of circulation and heat are clearly emphasized in the relevant German literature and much of the English language literature as well. The absence of any means for circulating and heating the air-gas mixture in cellar rooms which were supposedly used for mass-murder in Auschwitz is strong and clear evidence that the extermination claims, at least with regard to Zyklon-B, are sheer nonsense.

Disease in War and its Aftermath

A standard feature of the Holocaust story is the reliance upon photographs of thousands of dead bodies found in some of the
German concentration camps at the end of World War II. For people who are unfamiliar with the horrors of war, which includes most of us fortunately, those photographs are more than sufficient proof of a genocidal policy on the part of the German regime. Even for many veterans from the Western Allied armies who may have spent years reading the generally available literature, those photographs constitute convincing evidence of genocide. The claims of revisionists that the bodies were the result of catastrophic epidemics of typhus, typhoid, tuberculosis, dysentery, etc., are readily scoffed at as the foolish ravings of Nazi apologists. After all, how could disease alone have possibly caused such misery as one sees in those photographs? The bitter reality is that the photographs tell only a small part of the horrors of modern warfare.

How many Americans have any idea that for every Union soldier who died during the American Civil War from combat, including those who died from wounds and injuries, there were approximately two Union soldiers who died from disease? Despite all that has been written and said in a hundred years about the Civil War and shown on film, it would be surprising if one American in a hundred has any idea as to the relative size of these numbers even though the Civil War was fought on American soil and is a major part of America’s history.

Out of a total of 359,528 Union deaths from all causes, 110,070 were killed and mortally wounded but 224,586 died from disease. Of the deaths from disease, 44,000 were from “diarrhea and dysentery, acute and chronic” and 34,883 were from “typhoid, typho-malarial, and continued fevers.” By contrast, the total number of deaths arising from combat at the Battle of Gettysburg for the Union army is only 3,155 and for the Confederate army is only 3,903.

Conditions in the Confederate armies were probably worse generally than those for the Union army but the statistics were apparently destroyed in a fire in Richmond. As to civilian casualties from disease during the Civil War, especially in the South where most of the fighting occurred—no one seems to know.

In a well-written and moving book entitled Civil War Medicine, the author Stewart Brooks wrote:

Surprising perhaps to the layman but not to the student of history, disease was the great killer of the war. As one soldier wrote, “These Big Battles is not as Bad as the fever.” Of the Federal dead, roughly three out of five died of disease, and of the Confederates, perhaps two out of three. During the first year, a third of the Union army was on sick call, and probably an even higher figure obtained South. Intestinal infections, such as typhoid and “chronic diarrhea,” and “inflammation of the lungs” headed the list. Indeed, diarrhea and dysentery became more vicious as the fighting progressed.
A major cause of the high incidence of disease was the failure to take hygiene and sanitation seriously. The prison camps were, of course, terrible but apparently the camps where regular soldiers, i.e., not prisoners, spent months in the field were not much better. Brooks gives the following description of conditions in the camps generally:

In the beginning, and to an unhealthy extent throughout the war, the typical inductee on arriving in camp felt as free as a bird and lived like one. Few recruits bothered to use the slit-trench latrines (and those who did usually forgot to shovel dirt over the feces) and most urinated just outside the tent—and after sundown, in the street. Garbage was everywhere, rats abounded, and dead cats and dogs turned up in the strangest places. The emanations of slaughtered cattle and kitchen offal together with the noxious effluvia from the seething latrines and infested tents produced an olfactory sensation which has yet to be duplicated in the Western Hemisphere. As for water—and seldom was there enough—any source would do in the early camps. Frequently, it was so muddy and fetid the men held their noses when they drank the stuff. In many instances, the heavy rains washed fecal material directly into the supply with disastrous consequences. However, in time, water came to be regarded generally as a source of disease and attempts were made to secure wholesome supplies. The better outfits even progressed to the point of boiling befouled water—visibly befouled of course.

The United States Sanitary Commission was not long in recognizing these deplorable conditions as a threat to the Cause and dedicated itself to their eradication. By placing the matter squarely before the public and military, it paved the way for the institution of corrective measures relating to sanitation and hygiene. The Commission insisted that the bulk of sickness stemmed from filthy army installations and in no uncertain terms held the regimental brass responsible. Above all, it carried through with its proposals and admonitions via publications and workers and inspectors in the field. Nothing of such force was operative among the Southern armies, nevertheless some improvement was to be noted when conditions permitted. Although the camps tended to improve, it is open to question whether the same can be said of personal hygiene. The shortage of water and soap notwithstanding, this was mainly a case of poor education, carelessness, ignorance or, perhaps more to the point, the rural ways of the time. Among the officers, who usually represented the aristocracy, the rate of sickness ran, one-half that of the enlisted men. Again, the sickness rate for the Western theater—among the men of the frontier—tended to run double that of the Eastern.

The salutary effects of good sanitation and hygiene are severely compromised in the face of poor nutrition, and bad food was the rule.11

It is hardly a surprise that Americans know even less about a foreign war, albeit one in which America had a major role, but where Americans were generally far removed from the areas of greatest misery except at the very end.
Those who moralize about the piles of dead at Bergen-Belsen and Dachau should consider Andersonville, where 7,712 men died in six months out of an average of only 19,453 held. The Northern prison camps were also terrible. The "average number" of Confederates held in prisons by the North is 40,815 of whom 18,784 died. Only 252 Confederates held in Northern prisons died from wounds whereas 5,965 died from diarrhea and dysentery.

For the Mexican War (1846-48), the ratio of fatalities from disease to fatalities from wounds is even worse. 1,549 were killed or died from their wounds; 10,951 died of disease.

During the Crimean War (1854-56), 12,604 men in the French army died from wounds whereas 59,815 died from sickness. For the English, 4,602 died from wounds whereas 17,225 died from sickness. By contrast, although 35,671 Russians died from wounds, only 37,454 died from sickness.

Unfortunately, when war has ended, the misery of disease and its full extent is quickly forgotten. Medals for diarrhea and fever will not inspire new generations of young men to risk their lives for their country.

Diarrhea and dysentery, as well as typhoid, are all spread through contaminated water. Revisionists have generally not been aware of the importance of water contamination except for typhoid. In reality, all three of these diseases are extremely dangerous, especially in wartime when large numbers of people often live in camps with primitive sanitation and water supplies. During peacetime, one can afford the luxury of burial in sealed caskets or perhaps even the kind of watertight "body bags" that were used in the Vietnam War. However, in World War II this was a luxury which the Germans could not afford as a rule, even for their own people. As a preventive measure, the cremation of the dead was entirely appropriate to protect against all three of these deadly diseases.

In addition, elaborate water purification measures were employed at Birkenau, for example, where one can still see nine large water treatment tanks within 200 yards of Kremas 2 and 3. The life-saving purpose of these tanks is deliberately misrepresented by the Auschwitz Museum authorities today by a nearby placard stating that these facilities were "intended to produce driving gas from human excrements." The seriousness of any such intent on the part of the Nazis is refuted by the absence of roofs over these tanks either today or during the war as well as by the elaborate internal structures for filtering and the settling of solids within the tanks.

The bodies of men who have died or are near death from diarrhea or dysentery do not look any different if they were in a German concentration camp or in a Civil War prison camp or were part of a disease-ridden army under Grant or Lee or Napoleon. They are not a
pleasant sight. There are, unfortunately, relatively few pictures of sick soldiers from before World War II but they are available if one searches, even for the Civil War, and they are every bit as awful as anything from Bergen-Belsen.

**Typhus**

Typhus during the Civil War was apparently not the great problem that it has been historically in Europe.

To get some idea as to the historical importance of typhus, one should read Prinzing's *Epidemics Resulting from Wars* or some of the French or German works of the last century about Napoleon’s Russian campaign.

One discussion which is particularly meaningful for this analysis is by Dr. Wilhelm Pfannenstiel, who accompanied Kurt Gerstein to Belzec and Treblinka in August of 1942. Pfannenstiel was Director of the Institute for Hygiene at the University of Marburg an der Lahn and a major (Obersturmbannführer) in the SS. According to the “Statement of Kurt Gerstein,” Pfannenstiel made a speech while in Treblinka in which he said the staff had performed “a great duty, a duty so useful and necessary” and “Looking at the bodies of these Jews one understands the greatness of your good work!”

That Pfannenstiel made a speech complementing the staff at Treblinka is hardly surprising. However, the meaning and content of his speech in Treblinka was probably quite similar, to the speech he gave only a year and a half later in Bremen on January 10, 1944 from which the following is an excerpt:

The accounts which we have about the spread of pestilence as a result of the Napoleonic wars are shocking:

Because of the massive movements of troops through Germany, because of the quartering of the troops in houses of the civilian population and because of the economic consequences of the continental blockade, the groundwork after 1800 was especially well-prepared for the spread of epidemics. Russian troop masses brought what was at the time called “war-typhoid”—which included paratyphoid, dysentery and similar diseases, but above all typhus—to Eastern Germany. The French contaminated not only Western Germany but all of Western Europe including Spain with “war-typhoid.” Even in Sweden there were terrible epidemics. Only England remained untouched by the epidemics because of her position as an island.

The catastrophe which befell the army of Napoleon, which had originally numbered 500,000 men, was completely sealed with pestilence. During the initial advance, in one battle, four-fifths of the men became casualties from disease. In Moscow, which was rich in provisions, the soldiers recovered again. But then, after the burning of Moscow when the 80,000 men of the French army had to return over the infested military roads, they were almost totally wiped out from dysentery, typhoid and typhus. In Smolensk, the number of troops who had to remain behind from typhoid and dysentery rose to 15,000. In Wilna of 30,000 captured French troops, 25,000 had succumbed to
disease. Among the civilian population in Wilna at that time, 55,000 fatalities were reported in half a year.

The massing of troops before Leipzig brought new heavy outbreaks of epidemic. A report from Reils to Freiherr vom Stein describes the terrible conditions which arose primarily from the lack of medical care and military hospitals:

Leipzig, October 1813. Your Excellency has assigned me to submit an account about my findings about the military hospitals for the Allied armies on this side of the Elbe . . . I found approximately 20,000 wounded and sick warriors of all nations in Leipzig. The wildest imagination could not invent so lurid a picture of misery as I found in the reality before me . . . The wounded were lying either in gloomy dens in which amphibians would not have found enough oxygen or in schools with windows which had no glass and in high ceiling churches in which the chill in the air increased proportionally as the foulness diminished . . .

In those places they lie in layers just like so many tons of herring, all still in the bloody garments in which they had been carried from the heat of battle. Of the 20,000 wounded not a single one has a shirt, bedsheet, blanket, cover, straw sack or bedstead . . . Wounded who can not raise themselves to an upright position must discharge feces and urine under themselves and putrefy in their own excrement. For those who can get up, open tubs were available but these overflow on all sides because they are not carried outdoors. In Petri Street there was one such tub next to another which was used to deliver the midday soup. This neighborliness between food and human wastes must certainly produce such nausea that it can only have been overcome by the fiercest hunger. The most hideous example of this occurred at the clothing market. The loading platform was covered with a row of such overflowing tubs whose stagnant contents were slowly oozing over the steps. It was impossible to bring oneself through this cascade of slops, and force one's way to the entrance from the streetside . . .

I close my account with the most horrible scene which drove chills through my limbs and shattered my spirit. On the open field of the public school, I found a mountain consisting of garbage and the corpses of my compatriots. There they lay, naked and being eaten by dogs and rats as if they had been lawbreakers and homicidal arsonists.

I appeal to your excellency's humanity and to your love of my king and his people—help our brave ones, help soon, for every wasted minute is an act of murder.

We do not wish to deny that in this war on the enemy's side, for instance, in that hell which we inflicted upon the Poles in the pocket of Kutno, conditions in the Polish emergency hospitals were not very much different.

In all wars until the middle of the 19th century, casualties from disease were on the average six times as high as those inflicted by weapons. It was only in the War of 1870/71 that, for the first time in world history, the number of fatalities from disease was smaller. It was only half the total number killed. In the world war of 1914/18 the fatalities from disease were only one-tenth the number killed by weapons.

The recently deceased tropical hygiene specialist Muehlens comments: "If there were any victors in this war, then it was the
doctors and hygienists and those who faithfully assisted them. They saved thousands upon thousands through efforts from disease and death from epidemics."

During the First World War the German army and above all the German people remained almost totally protected from larger epidemics. The reason for this astounding fact is to be found above all in the fact that even before the war, thanks primarily to the scientific work of mainly German researchers, especially Robert Koch (whose 100th birthday we already celebrated on December 11, 1943) and his students, who discovered and brought to public attention the most important disease carriers, their means of transmission and the possible ways to combat them. During the campaign it developed, thanks to the scientific work which was conducted in the field examination stations as well as in the epidemiological branch, an additional series of discoveries was made in the area of causative agents of diseases and their modes. So it was that Paul Uhlenhuth, the recipient of the first Behring Prize, discovered the carrier which occurs with jaundice, namely the often fatal Weil disease (a waterborne spirochete which is infected through rat feces and carried to humans in the hot summer months.) The Volhynian disease again gave us trouble in southern France where it afflicted soldiers who had been bathing in rivers even though they had been warned by the civilian population that to bathe there in the hot season would make them sick. Also it was established once and for all that humans were infected by the classical typhus as well as the Volhynian or five-day fever only through the feces of infested clothes lice. Consequently an urgent need was recognized to construct appropriate delousing facilities to work as a filter and effectively prevent the spreading of this war disease into the territory of the Reich. While studying typhus, many a scientist—for instance, the Marburg student of Emil von Behring, Paul Roemer—came to his death. The recognition that European relapsing fever which is also transmitted by lice and which can be treated with Salvarsan, which is also effective against syphilis, and which saved the lives of thousands of Turkish soldiers in the Dardanelles campaign who were treated by our present tropical hygienist in the military medical academy, surgeon general Prof. Dr. Rodenwaldt.

During World War I, a number of germs were discovered in the feces as well as the soil which (if transmitted into open wounds) would cause gasodemia and other equally serious wound infections. Without any doubt, war has here furthered bacteriological research as well. The new discoveries were of utmost importance for the armies.

However, there still were epidemics and illnesses which one could not master. Foremost among them was the bacillus dysentery which must be regarded as the "primary war epidemic of the world war." This disease increased rather than decreased and retained its high mortality rate. Even amoebic dysentery caused considerable casualties which were so great among the English at Gallipoli that they contributed to the abandonment of this Churchill-inspired campaign.

Typhus and dysentery are the diseases which give us the most trouble in this war in addition to the venereal diseases and malaria.
During peace time, we did not have to fear the outbreak of major epidemics. But, the moment we crossed the borders with our armies, we entered areas in which (as for example in Poland) there was little trace of a prepared peacetime practice of defensive hygiene. It was only there that the first contact with the disease pathogens was found. And with the increase in the number of people who remained healthy but who carried the germs, the introduction of diseases into the Reich was assured.

Therefore, above anything else we must prevent any contact with foreign disease material through hygienic and prophylactic measures. Above all else, we must inoculate our soldiers and all medical personnel as widely as possible against all likely disease germs so that as far as possible, no casualties from illness will occur. How many millions of lives of recently wounded soldiers have been saved through prophylactic serum inoculation against tetanus cannot be measured. Today we even have vaccines which (for example, upon conscription into the Wehrmacht) could probably give lifelong immunity against tetanus. Also, in the development of vaccines against typhus and against dysentery this war has once again brought great progress. Vaccines against typhus from lice intestines, from chicken eggs, from rabbit lungs and from mice lungs are produced in gigantic quantities in large, newly constructed institutes, for example, in Cracow and Lemberg (Lvov). The inoculated cannot be protected completely against contracting the disease but they are protected against death from the typhus. The other kinds of typhus which are occasionally observed in the south of Greece, such as the so-called “murine” typhus which is carried by the feces of rats including their other parasites, or the so-called “tick typhus” from the brown dog tick are, despite the high fever, far less harmful to people than the “classical” louseborne typhus. The vaccinations against the classic typhus have been effective against the rare rat typhus but not against the tick typhus. Here one can protect oneself best by prohibiting troops in tick fever infested areas from keeping dogs, which can be carriers of other tropical diseases as well.

German hygienic science is also in the process of developing effective vaccines against dysentery. To control dysentery it is of the utmost importance to make human waste products harmless and to not give flies any opportunity to carry dysentery bacillus from feces to food. This is an especially important consideration in the construction of latrines. The East African campaign taught us in this regard about the very useful smoke latrines, the present war about the drill hole latrines which makes the transfer of disease from feces practically impossible.

Germany at War's End—the Wild West and the Hordes of Genghis Khan

Although great progress had been made in military medicine as well as medicine in general between the American Civil War and World War II, what use was all that amidst the chaos which reigned on the territory of the loser, particularly in Eastern Europe, near the
end of the war? Should anyone be surprised that after years of intense bombardment of civilian targets, to the extent that journalists agreed that Germany's cities looked like the face of the moon, the conditions to which people had been reduced were comparable to those from which the world had supposedly advanced in only eighty years?

Perhaps the best discussion of conditions at the end of World War II in Germany is by John E. Gordon, M.D., Ph.D., Professor of Preventive Medicine and Epidemiology at the Harvard University School of Public Health. I hesitate to give so many details about an author, but it is probably necessary to establish the fact that the excerpts which follow are not from someone who can be easily branded as another pro-German revisionist. The passages which follow were published in 1948 by the American Association for the Advancement of Science:

(5) Foreigners in the Rhineland...

The whole area seethed with foreign peoples, conscript laborers moving this way and that and in all directions, hoping to reach their homes, in search of food, seeking shelter. Most of the typhus was within this group and they carried the disease with them. They moved along the highways and in country lanes—now a dozen Roumanians pulling a cart loaded with their remaining belongings; here a little band of Frenchmen working their way toward France, there some Netherlands, or perhaps Belgians; and everywhere, the varied nationalities of the East—Ukrainians, Poles, Czechs, Russians. They moved mostly on foot, halted, then gathered in great camps of sometimes 15,000 or more, extemporized, of primitive sanitation, crowded, and with all too little sense of order or cleanliness.

These were the people where typhus predominated, more than a half million of them in the Rhineland, wearied with the war, undernourished, poorly clothed and long inured to sanitary underprivilege and low level hygiene. Add to this shifting population the hundreds of released political prisoners, often heavily infected with typhus but happily far fewer in numbers; the German refugees, first moving ahead of our troops and then sifting back to their homes through the American lines. Rarely if ever has a situation existed so conducive to the spread of typhus.

Typhus fever in a stable population is bad enough. It has demonstrated its potentialities in both war and peace. The Rhineland in those days of March, 1945, could scarcely be believed by those who saw it—it is beyond the appreciation of those who did not. It was Wild West, the hordes of Genghis Khan, the Klondike gold rush, and Napoleon's retreat from Moscow all rolled up into one. Such was the typhus problem in the Rhineland.

**The Epidemiologic Situation**

The great assault of the Rhine River got under way on March 24, the British 21st Army Group and the U. S. Ninth Army to the north, the First and Third Armies in the center, and somewhat later the U. S.
Seventh Army and the First French Army to the South. All found typhus fever; the British scarcely any, the Ninth some, the First and Third a great deal, while in the south the U. S. Seventh and the First French Armies again encountered relatively little.

The first really serious condition appeared when Buchenwald concentration camp was occupied by the Third Army on April 12th. The British soon uncovered Belsen camp, with still more typhus and misery. Then followed in order Dachau, Flossenburg and finally Mauthausen, all with hundreds of cases of typhus fever and sometimes thousands.

These concentration camps with their political prisoners and their typhus fever would have been problem enough. Added to the situation were millions of conscript laborers suddenly released from employment and from camps that were many times typhus infested. They scattered throughout the country. Many were gathered in large improvised camps. They spread typhus widely ...

Germany in the spring months of April and May was an astounding sight, a mixture of humanity travelling this way and that, homeless, often hungry and carrying typhus with them.

**Special Epidemiological Problems**

The outbreaks in concentration camps and prisons made up the great bulk of typhus infection encountered in Germany. Each presented an individual epidemiologic problem. That of Dachau is illustrative. The Dachau camp, located in Bavaria about 5 kilometers north of Munich, was one of the largest and certainly one of the most notorious of the Nazi installations housing political prisoners. It was liberated by units of the U. S. Seventh Army on May 1, 1945.

An estimated 35,000-40,000 prisoners were found in the camp, living under conditions bad even for a German camp of this kind and worse than any other that came into American hands. Extreme filthiness, louse infestation and overcrowding prevailed throughout the camp buildings. Several car-loads of human bodies were found packed in box cars in the railroad yards adjacent to the camp, the vestiges of a shipment of prisoners from camps farther north who were transferred to Dachau in the late days of the war to escape the advancing United States troops.

The number of patients with typhus fever at the time the camp was first occupied will never be known. Days passed before a census of patients could be accomplished. Several hundreds were found in the prison hospital, but their number was small compared with the patients who continued to live with their comrades in the camp barracks, bedridden and unattended, lying in bunks 4 tiers high with 2 and sometimes 3 men to a narrow shelf-like bed; the sick and the well; crowded beyond all description; reeking with filth and neglect—and everywhere the smell of death.

During the first few days little more could be done with the limited staff that was available than make the rounds of the barracks, pulling out the dead and the dying ...

Available records failed to demonstrate how many of the 4,032 patients of the Dachau epidemic were actually ill with typhus at the
time the camp came under American jurisdiction, how many
developed the disease within the succeeding 14-day incubation period,
. . . Even the appreciable figures cited fail to include all who
contracted typhus fever in Dachau concentration camp. Freed from
the sort of existence they had been living, it was no wonder that those
strong enough should attempt to escape. Many did, and scattered
widely through the nearby country, especially to the region south of
Munich. Some were actually in the clinical stages of typhus fever and
many were incubating the disease. They were later found with typhus
fever in other areas.

The camp was promptly quarantined. Hospitals were moved in to
augment the small prison hospital. Case finding teams initiated control
work through survey of the surrounding area for former inmates
developing typhus after leaving. The dusting of prisoners with DDT
powder was started May 3, 1945, and completed May 8.

Summary and Conclusions

Conditions in Western Europe in many respects favored a much
greater spread of typhus fever than actually occurred. Germany was in
chaos. The destruction of whole cities and the path left by advancing
armies produced a disruption of living conditions contributing to the
spread of the disease. Sanitation was low grade, public utilities were
seriously disrupted, food supply and food distribution were poor,
housing was inadequate and order and discipline were everywhere
lacking. Still more important, a shifting of populations was occurring
such as few countries and few times have experienced.

Native Germans, dislodged from their homes and often moving long
distances to escape the enemy, were finding their way back to their
native lands. The roads, the countryside, were full of released German
prisoners of war who lacked transportation and were their to their
homes on foot . . .

Two important factors served to limit the extent of the outbreak. The
most significant was the time of the year that allied troops entered
Germany. Had this been December instead of March, as would have
happened except for disrupted military plans, the problem would have
been much more serious. Von Rundstedt's Battle of the Bulge,
although of serious import militarily, had the favorable aspect of
postponing contact with typhus until the spring months.

Spring brought a lower potential of louse infestation, it permitted life
outdoors instead of crowding within existing habitations, and the
movement of displaced persons and refugees was facilitated, with
consequent greater dispersal. Dispersal of course, had advantages and
disadvantages. It tended to disseminate infection broadly—it limited
concentrated outbreaks.

Early repatriation of all Russian nationals, both prisoners of war and
conscripted labor, was undertaken in May and completed in June. A
large part of available American transport was turned to this end, with
the result that thousands of Russians were repatriated every day. They
were the population groups with the heaviest incidence of typhus.

Under any interpretation of governing circumstances, much credit
must be given to the efficiency of recently developed methods of
Typhus control. The value of delousing through dusting with DDT, and the usefulness of typhus vaccine were tried and tested on a scale greater than ever before and under conditions epidemiologically more conducive to extensive and continued spread of the disease. The results attained in the Naples epidemic were confirmed and extended.

No single factor contributed more to the satisfactory end of the outbreak than that never in the course of the epidemic were the fundamental supplies of DDT powder and vaccine lacking. Occasional difficulties arose in local distribution, but the supply system was such and the stock piles so great that they were promptly remedied.

The middle of July saw Western Europe return to a satisfactory situation of low grade typhus endemicity.18

Because of their overwhelming air power, the Western Allies had been able to wreak enormous havoc upon Germany, particularly her cities, long before any ground troops had been engaged near those cities. Cities which had taken a thousand years to build were destroyed in a few hours long before a single Allied tank or infantryman appeared.

In a recent best-selling book by the first man to break the sound barrier, entitled Yeager: An Autobiography, the author described how in the Fall of 1944 his fighter group was...

... assigned an area fifty miles by fifty miles and ordered to strafe anything that moved... We weren't asked how we felt zapping people. It was a miserable, dirty mission, but we all took off on time and did it. . . We were ordered to commit an atrocity, pure and simple, but the brass who approved this action probably felt justified because wartime Germany wasn't easily divided between "innocent civilians" and its military machine. The farmer tilling his potato field might have been feeding German troops."19

This was, incidentally, at a time when there was no reasonable doubt about the eventual outcome of the war nor any danger to the United States. The farmer tilling his potato field might have also been feeding concentration camp inmates or prisoners of war—how could one possibly tell the difference? How can Americans condemn Germans for not giving enough food to prisoners when they themselves were deliberately killing farmers growing potatoes in their fields?

One can well imagine that during the last months of the war—when entire German cities were destroyed almost daily—many German medical or supply personnel, who would have otherwise gone to perform assigned duties at concentration camps, simply felt that Germany's enemies could fend for themselves. How can anyone realistically blame them? How can anyone imagine that they would risk their lives under almost constant air attack to get to the camps, there to face death from disease and, sooner or later, the vindictiveness of the inmates and the liberators who had a major
part, at the very least, in bringing about the atrocious conditions in
the first place?

By the winter and early spring of 1945 in Germany, tens of
millions of people were fleeing west into an area so small that, even
in the best of times, enough food could not be produced to sustain
the normal population. Casualties were in the millions. The fact that
Germans facing extinction neglected the health and nutrition of
many of their most bitter enemies in concentration camps should
not be surprising.

Typhus in Eastern Europe

Typhus in recent centuries has afflicted primarily the countries of
Eastern Europe during wartime, especially during cold weather
when soldiers and civilians are least inclined to give up the warmth
of their clothes to bathe or clean their clothes. The misery that arises
from such personal behavior is, of course, compounded by the social
upheaval and movement of large masses of people that war tends to
bring with it.

The misery is probably unimaginable to a Western European or an
American. Some idea may be derived, however, from the following
text from the same British doctor who described the makeshift
delousing tunnels:

Predisposing Conditions

Louse-borne typhus fever is an acute infectious disease lasting from
twelve to sixteen days and characterized by a continued temperature,
a generalized maculopapular rash which may become haemorrhagic,
severe toxaemia, and marked nervous manifestations. The disease is
carried by lice and spreads with extreme rapidity especially through a
badly nourished population. Thus in Russia during the period 1919 to
1922 the estimated number of cases was 10,000,000, with 3,000,000
deaths, in a population of 120,000,000. These are stupendous figures.
Their scale can be realized to some extent by recalling that in the
much-described typhus epidemic in London in 1856 only 1,062 cases
were recorded as treated in the London Fever Hospital out of a
population of 3,000,000 whereas in Russia in the year 1921 alone there
were 4,000,000 cases in a population of 120,000,000. These figures
can, of course, only be approximate, as many cases diagnosed as
typhus were in reality instances of relapsing fever; on the other hand a
vast number of cases of typhus were never admitted to hospital and so
remained unrecorded. Of the cases admitted to hospital very many
were never notified by the Russian medical officers owing to pressure
of work. So uncertain were the statements that when we went into a
new district to survey the amount of typhus present we found it more
useful to base our estimate on the number of women with recently
shaved heads seen in the streets, than to rely upon notification figures.
All cases on admission to hospital for typhus were closely shaved and
consequently it was possible to sit in a cafe and determine the
proportion of women with closely cropped heads to the general
population and so to estimate roughly the amount of typhus in the region.

Epidemic typhus fever, is, classically, associated with famine and overcrowding, but there is a third factor which, to my mind, is perhaps of even greater importance, namely, widespread movements of military or civilian populations bringing non-immunes into a district where the disease is endemic or carrying the disease into a typhus-free region. A third possibility is that such movements may introduce into an endemic region either a new strain of the disease or one of enhanced virulence. The first mode of infection I saw well demonstrated in the epidemic in North China two years ago which was due to the introduction of masses of non-immunes with the Army into areas where the disease was endemic. The second method occurred on the return of Polish prisoners of war to Poland from Siberia in 1919-1922. These men, women and children had been heavily infected with typhus in Russia, and passed into Poland at the rate of tens of thousands a day, going to regions in which the disease either was already endemic or did not exist previously; in both cases widespread epidemics resulted.

Apart from mass movements of the kinds instanced above, a striking feature of epidemics is the amount of local movements of the population that they initiate. Once typhus is really established in a district, fear of contracting the disease, combined with terror of the appearance and acts of delirious patients, is soon widespread. Transport of food and fuel quickly breaks down, starvation threatens, the sick are abandoned, often in the roads, the houses are deserted and the terrified population flees from the infected area into a neighboring village or another part of the town as the case may be, carrying the disease with them. Too often the hospital staffs may flee with the others.20

But there is still more horrors. During the early 1920's in Russia, for example cannibalism had become widespread. Mothers were murdering and eating their children, adults were murdering and eating their parents. 26 people who had resorted to cannibalism and 7 others who had sold human flesh were identified by one Russian doctor alone on the basis of his own personal observations. In the town of Samara, the entire mental hospital was set aside for people who had committed cannibalism. The German doctor who reported such incidents in 1923 wrote that such acts were not unusual and attributed the practice to the psychological deterioration of people suffering from protracted hunger and disease. One mother, for example, had gone into a rage as her murdered child was taken away from her and had cried out that it was her child, she had borne it, and that no one had the right to eat it except for her. Interestingly enough, the German doctor thought it significant that the people who had committed such acts were all native Russians from the lower social strata and that "there were no German colonists, no Jews and no members of any other nationality among them."21
Typhus Vaccine

One interesting fact which Pfannenstiel discussed in the text quoted earlier was that in 1944, the Germans still did not have a totally effective anti-typhus vaccine but only a vaccine which "protected against death from the typhus"—in other words, they only had a vaccine which reduced the severity of typhus when a vaccinated person contracted the disease. American troops were repeatedly inoculated against typhus which suggests that the American vaccine was not totally effective either. The major line of defense against typhus, for the Americans as well as for the Germans, was thorough and repeated delousing.

The SS personnel records for Dr. Josef Mengele show that he contracted typhus while at Auschwitz even though he, as a doctor, would certainly have been given preferred access to any available vaccine. There were probably some bad experiences with the German anti-typhus vaccine which is illustrated by the fact that even after the war at Belsen where a German Army medical team had been put to work caring for the sick at the "human laundry," at least one German doctor had refused to let himself be vaccinated by the British against typhus and had apparently told the German nurses not to take the vaccine either. About a month later, 32 of the 48 German nurses were in bed with typhus.22

The German wartime medical literature abounds with articles about German research into the development of anti-typhus vaccines and treatment. No doubt, there were many experiments upon concentration inmates in this regard which did provide some basis for some atrocity stories after the war. The principal beneficiaries of this research, however, were the inmates themselves, since it was they who were in the greatest danger from typhus.

Typhus and the Jews

The German wartime medical literature makes it quite clear that many Germans in positions of authority regarded the Jews as a major source of typhus infestation in Poland. Of course, because this literature is highly critical of Jews as a group and was written by Germans living under National Socialism, many readers will simply dismiss it as anti-Semitic propaganda. In any event, regardless of the motivations of the German authors, confirmation of many of their observations can be found in credible non-German sources.

In a lengthy article published by the Royal Society of Medicine, E. W. Goodall, one of the most highly regarded British epidemiologists, described his experiences in Poland in the Summer of 1919:

The city of Warsaw had at the time of the epidemic a population of about 700,000 persons. I understood that this figure did not include any of the German troops, but represented the civil, Polish, population only. The epidemic started in the Jewish quarter of the city, and at first
spread chiefly amongst the Jews. According to Dr. Trenkner the same thing happened at Lodz, of which city he was medical officer before he was appointed to Warsaw in 1917, and in many other places in Poland. Dr. Janiszewski confirms this statement. In the Warsaw epidemic, 73 per cent. of the cases occurred amongst the Jews, and 23 per cent. of these in one particular part of the Jewish quarter where the population was most dense. In the other quarters the number of cases was in proportion to the number of Jews amongst the inhabitants. The Jews form 30 per cent. of the population of Warsaw. Roughly, the number of cases in the different districts was in proportion to the density of population, and the density is highest in the parts of the city inhabited by Jews.

Since the epidemic of 1917-18 typhus has become more widely diffused through Warsaw, but the 1919 epidemic, if it can be called such, was comparatively slight. Lately (1919) the Christians have been attacked in larger numbers than the Jews. The attack-rate of the 1917-18 epidemic was between 3 per cent. and 4 per cent., and the fatality was about 9 per cent. It is a curious fact that the fatality amongst the Jews was half that of the Christians, 7 per cent. as against 14 per cent. Dr. Trenkner accounted for this difference by the greater care and attention the Jews bestowed upon their sick. They also called in medical advice earlier than did the Christians, so that their patients came under treatment sooner.

As regards age-incidence I was supplied with the following figures relating to 5,747 consecutive cases occurring at the end of 1917:

<table>
<thead>
<tr>
<th>Age</th>
<th>Cases</th>
<th>Deaths</th>
<th>[% of] Fatalities</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-10</td>
<td>908</td>
<td>7</td>
<td>0.7</td>
</tr>
<tr>
<td>-20</td>
<td>2,407</td>
<td>29</td>
<td>1.2</td>
</tr>
<tr>
<td>-30</td>
<td>1,035</td>
<td>43</td>
<td>4.1</td>
</tr>
<tr>
<td>-40</td>
<td>717</td>
<td>71</td>
<td>10.0</td>
</tr>
<tr>
<td>-50</td>
<td>513</td>
<td>86</td>
<td>16.7</td>
</tr>
<tr>
<td>-60</td>
<td>112</td>
<td>59</td>
<td>52.6</td>
</tr>
<tr>
<td>-70</td>
<td>50</td>
<td>19</td>
<td>38.0</td>

<tr>
<td>Total</td>
<td>5,747</td>
<td>317</td>
<td>5.5</td>
</tr>
</tbody>
</table>

It is evident that these figures relate to a period of the epidemic when the fatality [rate] was below the mean . . .

**Zawiercie**

. . . At the time of this epidemic the population of Zawiercie was about 44,000, so that the attack-rate was about 3 per cent. From official figures which were given to me it appears that the Jews formed 19 per cent. of the population. According to Dr. Ryder the Christians were attacked in a larger proportion than the Jews, as shown in the following table, which deals with about three-quarters of the epidemic and with the first six months of 1919: . . .

The Jews were said to be less cleanly than the Christians, and from what I saw of them I should say that this was true. But there were reasons for thinking that there was more concealment of cases
Causes of the Prevalence of Typhus

It is not difficult to account for the wide prevalence of typhus in Poland since the beginning of the war on general grounds. Constant warfare, the movements of troops, the influx of refugees from the districts which were the actual scenes of fighting, the return of prisoners of war, especially since the armistice, in both directions across the country, the lack of soap and clothing and of medical and surgical necessities in the country districts and in many of the towns the difficulty of obtaining sufficient water, would be factors conducing to the prevalence and dissemination of lice, that is to say of typhus, in a country where the disease had been endemic before the war. Medical men and nurses have been very scarce, and there has been a deficiency of food for the poorer classes, especially in the East and South-east. The figures I gave at the commencement of this paper showed that typhus had been especially prevalent since the armistice. There is no doubt that when the Germans and Austrians established themselves in Poland in 1915, they both, and especially the former, used their utmost endeavours to keep infectious diseases under control, not from any love they bore to the Poles, but with the object of keeping their armies free from sickness. There can also be little doubt that to a certain extent, however of their efforts there was the large epidemic in Warsaw in 1917-18. Dr. Trenkner attributed the epidemic chiefly to the action of the Jews. Much smuggling, especially of food, went on from outside into the city. The smugglers, who were chiefly Jews, hid and slept together in little groups in sheds and barns. Members of the groups became infected with typhus and carried the disease into the city. Dr. Trenkner on various occasions traced fresh cases to group infection in this way. Overcrowding and want of cleanliness did the rest. In Zawiercie the action by the Germans seems to have had more effect, and there was not any great prevalence of disease before they left. In that part of Poland which I visited—viz., the county of Bendzin, typhus had become especially rampant since the armistice, as was exemplified in the Zawiercie epidemic. Directly the Germans left there was an unrestrained movement of population to and fro between the town and surrounding country; released and escaped prisoners of war began to return, especially from the East; and refugees flocked to the West from the devastated Eastern districts. . . The Germans had been severely thorough in their sanitary measures. They set up de-lousing stations and forced the inhabitants to be de-loused at the point of the bayonet. When they left compulsion ceased and personal cleanliness diminished.

Adverse, however, as the circumstances have been in Poland, during and since the war, it must not be supposed that the authorities have not attempted to deal with the epidemic. As far back as April, 1918, that is to say, six months before the Germans quitted Warsaw, Dr. Trenkner made a great effort to cleanse the houses and their inhabitants in the worst and most crowded parts of the city, a proceeding to which the Germans offered no objections, as of course
such a measure was conducive to keeping their army free from infection. But the task was a very difficult one as the people were by no means anxious to help the authorities. If the inhabitants of a certain square for instance got wind that their houses were going to be visited by the sanitary squad, they cleared out and locked their rooms up. However, this obstacle was overcome by making unexpected visits very early in the morning, taking the passports away from the inhabitants, who were sent off to the de-lousing station, with the instruction that they would not receive their passports back again until they produced the certificate that they had been deloused. Meanwhile, their homes were disinfected and cleaned . . . 23

The percentages given above for the incidence of typhus among Jews are actually quite close, almost identical in some instances, to the figures given by Zimmermann a generation later. It is, therefore, more than likely that the German authors were accurate also.

A possible explanation for the high incidence of typhus among Jews may be their role as merchants of old clothing. For example, in Prinzing's classic work Epidemics Resulting from Wars, the author discusses the possible cause for the spread of bubonic plague and typhus in Eastern Europe during the Russo-Turkish War of 1769-72. After every trace of the pestilence had disappeared except for military hospitals, the reemergence of the plague later on was traced to the purchase by a Jew of a fur coat in a military hospital in Jassy. 24 Later again, in Transylvania during the same war, "Jewish pedlars, who purchased clothes, furs, and war-booty in the Russian camp, likewise helped to spread the disease." 25 At the end of Napoleon's Russian campaign, Prinzing tells us about the typhus epidemic in Vilna in 1812-13 which "In a short time spread throughout the city, not so much because the soldiers were quartered in private houses, as because the Jews got possession of the clothes of the dead. Of some 30,000 Jewish inhabitants, no less than 8,000 died." 26

Jewish Resistance and the Torture of Bathing

The intense resistance by the local population, by Poles as well as Jews, to the public health measures that responsible authorities intended for their welfare is also evident in a remarkable recent book, entitled Typhus and Doughboys, about the American military experience in post World War 1 Poland. The book is based largely upon the internal correspondence of the American Polish Typhus Relief Expedition from 1919 to 1921. The book deals at great length with the difficulties American troops encountered when they tried a variety of methods to induce people simply to bathe and have their clothes deloused either with steam or cyanide.

The difficulties were illustrated by the following passage about the efforts of one American officer in what appears from the context to have been a predominantly Jewish community.

The school children were next bathed and deloused, Gorman
observing that “if the older people were as enthusiastic as these children, typhus would no longer be a dread in Poland.” Unfortunately, the older people were content to live in the unimaginable dirt and filth, one old woman having been heard to cry out, “death here in my hovel rather than the torture of bathing.” 27

The book is quite valuable for its insights based upon an analysis of the actual correspondence of American officers. However, one should recognize that the book was written recently in an age when the foulest rubbish can be written about Poles, Germans, Austrians and even Americans with almost no hesitation at all but when criticism of Jews is inevitably accompanied with deep apologies. The following passage is informative nonetheless. 28

Dixon pointed out some difficulties with the Jews, revealing his own anti-Semitic bias. In the town of Busko, which he inspected, he reported “there is considerable Typhus in the town particularly among the Jews. They are afraid to go to the hospital and use all means to keep the disease among them hidden.” They believed, in fact, “that at the hospital they would not be able to live according to their religion—that they would be required to eat what the others ate—that they could never eat with their hats on and that if one of them died there he could not be buried according to his religion. This belief is being overcome and the hospital now has ten Jews as patients.” Dixon also induced local authorities in Busko to impose a fine of 500 ruble on anyone who hid or attempted to hide a case of typhus. But, he recorded, “it did not prove very effective as the Jews, who were afraid of the hospital bribed the police and kept their sick hidden.” 28

Except for Dixon’s charge that Jews bribed the police, there seems no reason to believe he was biased; he seems to be simply reporting what he saw.

The same intense resistance to the most minimal measures which any civilized society can impose for its own survival—the simple act of accurately reporting cases of a highly contagious disease—is evident in Lucy Dawidowicz’s The War Against The Jews for 1939-42 for the Warsaw ghetto:

In the Warsaw ghetto alone, epidemic typhus was believed to have affected between 100,000 and 150,000 persons, though the official figures were barely over 15,000. The spread of disease was concealed from the Germans. Hospital cases of typhus were recorded as “elevated fever” or pneumonia. Mainly, the stricken were treated in their homes in a massive clandestine operation, covering up the presence of the disease from German inspection teams who periodically threatened to seal off the affected areas. 29

The intensity of the Jewish resistance to the simple act of bathing, for the 1920’s at least, is illustrated in Typhus and Doughboys by the following passage about American efforts in the town of Wlodowa:

... further difficulties were in the form of considerable resistance among the population to bathe. The town’s officials also vacillated,
whereupon the police had to be used to compel the people to do so. Soon the town officials devised a plan whereby those persons who had been bathed were provided with a ticket and only those who possessed one could buy bread and potatoes in the stores. However, this was rather ineffective as forged tickets soon appeared and also, as Gillespie [an American first lieutenant] contemptuously charged, “The Jews would get their tickets, alter the name on them and sell them to some other person.” Theft was not unheard of, and the Poles hired to assist the operations proved the worst offenders. This necessitated daily searches by the police. 30

Another passage tells us just how often the people in a largely Jewish community took baths even under American administration.

It went without saying that none of the houses had any modern sanitary conveniences. All refuse was poured into the gutters at the front door, two latrines were provided by the town but were little used. Snidow [an American first lieutenant] noted that “in almost all of the house areas would be found after much search an open latrine which they jealously guarded from us by all kinds of disguises and camouflage as the product therefrom would be used after the harvest to put on their small patches in the outskirts of the town.” Most of the drinking water was obtained from a sluggish creek at the edge of the town, which a mill dam rendered more sluggish and sometimes covered the yards of some of the houses, turning them into “reeking swamps.” The people were inclined to wade in the creek, as were the cattle and geese. There were a few wells, “but all of them drained directly from the nearby latrines.” Moreover, as Snidow recounted, “in the first preliminary council we were assured by the priest, the rabbi and mayor and later confirmed by two doctors that not a soul in the town had had a bath for over a year. This statement we considered conservative and I personally doubt if water had touched the persons of most of them since the departure of the Germans during whose occupation they were required to bathe at least once a week, when they could be caught.” There was a good community bathhouse, but the people had “formed a horror of it” from being compelled to bathe there by the Germans, and would not use it. 31

Confirmation of the general unsanitariness of the Polish Jews was even given by the Jewish Chairman of the Warsaw Judenrat, Adam Czerniakow. In his diary, which has been highly praised by Raul Hilberg among others, Czerniakow wrote for May 29, 1942:

I have been going through the streets with Brodt issuing reprimands or dispensing money awards to the janitors. Considering the level of civilization in this community, the ghetto cannot be kept clean. People, unfortunately, behave like pigs. Centuries of slovenliness bear their fruit. And this is compounded by the utter misery and dire poverty. 32

After World War II, General George S. Patton described Jews living under his military authority in southern Germany. Martin Blumenson the editor of The Patton Papers regarded these remarks
as indicative of a growing anti-Semitic attitude. For September 17, 1945—five months after the liberation of the last of the German concentration camps—Patton wrote:

We drove for about 45 minutes to a Jewish camp . . . established in what had been a German hospital. The buildings were therefore in a good state of repair when the Jews arrived but were in a bad state of repair when we arrived, because these Jewish DP's or at least a majority of them, have no sense of human relationships. They decline, where practicable, to use latrines, preferring to relieve themselves on the floor . . .

This happened to be the feast of Yom Kippur, so they were all collected in a large wooden building which they called a synagogue. It behooved General Eisenhower to make a speech to them. We entered the synagogue which was packed with the greatest stinking bunch of humanity I have ever seen. When we got about half way up, the head rabbi, who was dressed in a fur hat similar to that worn by Henry VIII of England and in a surplice heavily embroidered and very filthy, came down and met the General . . .

However, the smell was so terrible that I almost fainted and actually about three hours later lost my lunch as the result of remembering it. Clearly, on the basis of the preceeding passages, there was general agreement among German doctors, British doctors, Polish doctors, American military officers and even some Jews as to the frequent aversion to cleanliness of Jews in and from Poland. To some extent, the backwardness of the Polish Jews can be explained by poverty and persecution. But, whatever the cause, it is still difficult to comprehend the hysterical resistance to minimal standards of hygiene and civilized living when a modest amount of common sense should have told them that it was necessary for their own survival. An attachment to a traditional lifestyle going back centuries, if not millennia, may have been regarded as vital to their religious and ethnic identity.

In any event, it should be understood that Jews from Western countries were generally quite different in their personal habits. When these Jews were placed in camps with Polish Jews, they were as appalled as any other Westerners would have been. It does not seem fair to attribute the behavior of the Polish Jews to religion alone—but, religion may be important, nonetheless.

Regardless of the true extent of the Jewish contribution to the spread of typhus, it is certainly safe to say that the German authorities were absolutely sincere in their statements that the Polish Jews were a major contributing factor in the spreading of the disease. They had not only the evidence of their own doctors to support this view but that of British and Polish doctors as well. They can hardly be blamed for applying severe measures to the Jews in order to control the epidemic. The severe measures included restrictions on the movements of Jews and eventually to the
construction of a wall around the entire Warsaw ghetto. These measures during wartime were entirely reasonable to control the spread of typhus, and to prevent catastrophes like those which had already occurred in Poland and Russia during and after World War I.

One should realize also that although medicine had made great progress in the years between the world war, not much progress had been made with regard to typhus. There was still no truly effective vaccine or treatment. The means for detection of typhus had been improved but that in itself did not go very far in preventing catastrophic epidemics except to alert authorities to be more stringent in their delousing of people, or of contaminated areas or trains coming from or passing through those areas. The real breakthrough came only near the end of the war with the availability of enormous quantities of DDT from the Americans for delousing.

In any event, it is quite clear that the high incidence of typhus among Jews was not simply the result of persecution by the Germans, or of the confinement of Jews first in ghettos and then in concentration camps. One of the main objectives of the camps was to maintain strict enough control upon the inmates so that typhus would at least subside if not disappear altogether. During the last months of the war, however, when typhus reappeared with a vengeance, the Germans had no choice but to maintain as tight control as they possibly could upon the inmates, to keep any of them from escaping, even if they could do little to help them. When the British took Bergen-Belsen at the request of the SS, they were appalled at what they found and considered simply moving the inmates out of the camp into neighboring dwellings. They quickly realized, however, that that would have only compounded the disaster.

**Delousing as a Cover for Mass-Murder?**

It is often claimed in the Holocaust literature that the Germans disguised their extermination facilities as delousing stations with showers and barbers and laundries in order to lull Jews into the gas chambers. From the material already quoted, it should be obvious that a more unlikely arrangement to lull Polish Jews into doing anything would be hard to imagine. The prospect of bathing could have only had the opposite effect. In addition to their fear of showers and bathing generally, it was inevitable that there would have also been many false rumors which could have only compounded the Jewish resistance.

Was the visit of a highly respected professor of hygiene, Professor Pfannenstiel, to Belzec and Treblinka only for the sake of putting on a convincing disguise? His visit makes no real sense unless the purpose of these camps was to do precisely what all other Durchgangslager or transit camps were intended to do, i.e., to
delouse and medically examine and possibly quarantine people who were being moved to a new location. Although specific details about Treblinka, Belzec and Sobibor may no longer be available, the planning and organization in general was not a secret. The planning and organization was thoroughly described in German wartime technical journals such as Gesundheits-Ingenieur and Arbeitseinsatz und Arbeitslosenhilfe.

Basically, each transit camp or Durchgangslager was divided into a "clean" zone and a "dirty" zone with a strictly enforced barrier between the two zones. A delousing station straddled the boundary between the two zones at some point. Each camp was arranged so that new arrivals could only enter the "dirty" zone. To get over to the "clean" zone, they had to pass through the delousing station. Inside the delousing station, each person had to remove all of their clothing and belongings which would then be fumigated with cyanide, or steamed, or else heated with hot air while they took a shower and underwent a thorough medical examination which might include X-rays to determine their state of health and whether or not they had any contagious diseases such as typhus and tuberculosis. If they failed to pass the exam, they might be sent back to wherever they had come from originally or they might simply be kept in a quarantine area for several weeks. If they passed, they would eventually be sent on, usually to another camp and put to work.

Some additional details for handling people riding the trains in Eastern Europe were given by a German doctor:

The large delousing facilities worked in the last years according to the following principle: The train arrives at the unclean side of the railroad station. All passengers then give their baggage on the unclean side to the baggage handlers. They are then led into the unclean changing rooms where specially constructed iron clothes hangers and linen sacks which can be boiled with valuables and flammable objects are available. After giving up the clothes hangers with their clothing, they each each receive a control token. Now they go with their boots and the sack with valuables to a short medical examination, for the sorting out (selection) of persons sick with infection, and after receiving a handtowel and soap to the showers. Here even the boots are disinfected with 5% creosol soap solution. After showering, one receives a linen suit. In the dressing room of the clean side, they wait for the calling of their control token number and then the deloused clothing is put on again. Upon leaving the delousing facility one receives a certificate and can then, after picking up one's baggage on the clean side of the baggage area, get on to the train which is waiting on the clean side of the railroad station for continuation of the trip. The entire facility is so constructed that it is impossible to go directly from an arriving train into a departing train without passing through the delousing facility. In all rooms of the facility there are, of course, medical personnel who, among other things, see to it that all
flammable objects are taken out of the pockets and that all pieces of clothing and pockets are turned inside out before being hung on the hangers.36

The drawings that one occasionally sees in the Holocaust literature of Treblinka, Belzec and Sobibor and which we are told were drawn from memory, usually by “survivors,” do bear some resemblance to the drawings in the German technical literature, especially with regard to the separation of dirty and clean zones and some kind of facility with gas chambers straddling the boundary between the two zones.

What has apparently happened over the years is that a certain amount of truth has filtered its way through the lies and nonsense. For example, when it was claimed that the Jews were killed at Treblinka with steam—at least until the Diesel method was supposedly developed—there was probably some truth to that story. The truth is that steam was used, but for delousing of clothing and not for murder. When the Germans referred to Treblinka, Belzec and Sobibor as Durchgangslager, it was precisely because those places actually were Durchgangslager in the sense in which the Germans always used that term; the Durchgangslager were places which people had to “pass through” on their journey to some other destination.

Were the trains for the deportation of Jews fumigated?

As bad as the hygienic and sanitary conditions were in the Jewish ghettos, conditions on the trains carrying Jews must have been even worse. We are assured of this by the “Holocaust literature” itself. That literature abounds with stories of misery and filth on crowded railroad cars, in many cases freight cars, which were indeed used to move many Jews to the East. On the return trips to the West, these same railroad cars would logically have been used to transport freight and people, German troops prisoners and Eastern European workers.

Is it conceivable that railroad cars used on one occasion to transport Jews in conditions that were even worse than those in the Jewish ghettos would be subsequently used to transport non-Jews back to the West without thorough delousing and cleaning? The answer must be—no! It would have been madness for the Germans not to delouse these trains. If there was ever a need to delouse a train, that need would surely have been greatest for trains that had carried Polish Jews. The mere fact that a train had come from the Warsaw ghetto where typhus had been rampant would, in itself, have been reason enough for a thorough delousing of the entire train afterwards, before using it for any other purpose.

The Budapest Fumigation Plant for Mass-Murder?

How then could the knowledge of the operation of those superbly
designed gas chambers, which used Zyklon-B as a matter of routine to delouse railroad trains, have been unknown to the very same Nazis who were supposedly exterminating the Jews?

Furthermore, once the existence and the locations of the railroad delousing tunnels would have been known to the mass-murderers, why would they have ever again bothered to use anything else for mass-murder?

The fact that neither the Budapest gas chamber nor any other railroad delousing tunnel, either in Hungary or anywhere else, has ever been implicated by any of the Holocaust "scholars" merely shows how twisted the Holocaust story really is. Surely, the SS would have seen the logic in using the gas chamber in Budapest to exterminate the Hungarian Jews, if extermination had ever been their intent, rather than transport these same Jews to Auschwitz in mid-1944 when Germany was desperately trying to move troops and supplies to the Normandy invasion area. Surely they would have used the Budapest gas chamber rather than trying to use "gas chambers" which were hardly more than ordinary cellars with small holes in the ceilings through which the Zyklon-B granules were supposedly dumped either onto the heads of intended victims or else down perforated sheet-metal false columns with internal spirals.

Those claims are absurd for technical reasons alone. However, they are also absurd because of the superb technology which they could have easily been employed to do the terrible deed properly. Surely, Adolf Eichmann and at least some of the people around him with their expertise in railroad transportation and scheduling would have known—the Final Solution of the Jewish Problem was, after all, largely a problem of transport even on the basis of what the Holocaust "scholars" write themselves.

Can anyone believe that the Nazi murderers shipped hundreds of thousands of Jews away from a gas chamber which was one of the most advanced large gas chambers in the entire world, designed specifically for Zyklon-B, to kill them instead in cellar rooms which had been designed as cold-storage mortuaries but subsequently disguised as showers?

Conclusions

Despite great progress in hygiene and sanitation in the last century and despite German efforts throughout most of the war to practice good hygiene and sanitation in the concentration camps, conditions by the end of the war had deteriorated horribly. The history of the American Civil War and other wars of the last century shows that conditions in the regular military camps of that era, not just prison camps, were appallingly similar.

Anyone seriously interested in possible applications of Zyklon-B would have certainly read the DEGESCH advertisements showing large gas chambers for the fumigation of railroads and trucks.
Surely, anyone reading the relevant technical literature about Zyklon-B would have also read the detailed discussions of the same gas chambers and how they were constructed with blowers and ductwork for circulation, specially coated interior walls as well as heaters to raise the interior temperatures above 78.6° F.

The very idea that the Germans would have constructed showers and delousing facilities in order to lull Polish Jews into gas chambers is ridiculous. Polish Jews were probably the least likely people in all of Europe, if not the world, to react calmly or peacefully to the prospect of bathing under any circumstances.

Polish Jews lived in highly unsanitary surroundings, in which typhus had, in fact, already reached epidemic proportions and from where typhus was more than likely to spread despite a strict quarantine imposed by the Germans. Polish Jews accounted for roughly 3/4 of all known cases of typhus for all of Poland not only during the early part of World War II but also during the years following World War I after German troops had left.

The Germans would have been especially meticulous in fumigating or delousing precisely those trains which were used after 1941 to move large numbers of Polish Jews to the East. On the basis of the “Holocaust” literature itself, even the Polish Jews regarded those trains as appallingly filthy. If there were ever a need to fumigate railroad trains, then it would have certainly been those trains. Regardless of the ultimate fate of the Jews at Treblinka or Belzec or Sobibor once they had stepped off the trains, the Germans would have certainly fumigated those trains afterwards before using them to carry German troops or prisoners or freight on the return trips to the West. To do less than that would have been totally inconsistent with numerous Jewish comments that the Germans were “obsessed” with cleanliness and fear of typhus.

German officials involved with the scheduling of railroads in Eastern Europe would have been well aware of the need to also schedule fumigations of railroad trains which had carried lice-infested cargo or people or which had simply passed through areas in which typhus was present such as the Warsaw ghetto area. Adolf Eichmann and many others involved with “The Final Solution of the Jewish Problem” would have been well aware of the need to delouse those trains. They would have certainly had the good sense to also recognize the obvious: that the gas chambers which were being used to fumigate empty trains with Zyklon-B could just as easily be used to fumigate trains filled with Jews. They would have certainly had the good sense to recognize that the same gas chambers used to fumigate empty trains after the Jews had stepped off could just as easily be used to fumigate trains before the Jews stepped off. What could have been simpler or more logical. What greater cover or deception could one imagine—and no fake showers or delousing
stations or transit camps either. For these reasons, and many others, the Holocaust story is absurd.

Notes

2. In German technical jargon, the term Begasungstunnel (in English: "fumigation tunnel") was applied for many years to the fumigation plants even though these were not true tunnels—they were only open at one end. For example, in the article by Peters to which he refers in Appendix A—Peters, "Durchgasung von Eisenbahnwagen mit Bläusäure (Fumigation of Railroad Cars with Hydrocyanic Acid)," Anzeiger für Schädlingskunde Vol. 13, Heft 3, pp. 35-41—one can see two photos of the Begasungstunnel in El Paso, Texas as well as one of the Begasungstunnel in Sarajewo. The persistence of the term "tunnel" is an obvious link to the typhus control measures employed by the British, and probably others, during the post WW1 epidemics. It is also a clear suggestion of much larger chambers that could have been employed.

3. This particular journal was probably the one which any especially interested person would have been most likely to examine for detailed information about the actual application of Zyklon-B.

Although this particular printing was made after the war, it seems clear enough from the printing number and from the context that the events described occurred during the war.

APPENDIX A

A Modern Railroad-Disinfecting Plant
(Eine moderne Eisenbahn-Entwesungsanlage)
by Dr. G. Peters

Translated by F. P. Berg and E. Kniep from:
Anzeiger für Schädlingskunde, Vol. 14
(Berlin: Verlagsbuchhandlung Paul Parey, 1938), Heft 8, pp. 98-9.

In Heft 3 of this journal from the previous year, we summarized the development over the years of methods for fumigating railroad trains with hydrocyanic acid. Within that discussion, several
fumigation tunnels were also mentioned, some of which are in operation in the Balkans and some in Central America. Finally, the application of vacuum plants (Vakuumanlagen) for this purpose was also discussed. In the meantime, another quite interesting, larger fumigation chamber for railroad cars which deserves a special discussion has been built and brought into operation in Budapest.

The facility which was proposed by the Hungarian State Railways and constructed in collaboration with the German Company for Pest Control, G.m.b.H. [DEGESCH], Frankfurt on the Main, is special because it is the first time that a fumigation chamber on the largest scale has been created and tested with a circulatory system. The circulatory arrangement (Kreislaufführung) for mixing air and gas is known to have great advantage[s]: on the one hand, the gas evolves [is driven out of the granules in the cans of Zyklon-B] more easily and, on the other hand, the gas is distributed faster. We need not examine the construction of such circulatory plants in great detail—it is sufficient to point out that: circulatory gas-generating equipment (Kreislaufvergasungsapparaturen) allows one to easily and safely handle even the most poisonous substances; furthermore, by means of a repeated exchange of the entire air-gas mixture during the first hour of fumigation, the concentration of the air-gas mixture is ideally distributed so that the losses [of cyanide] due to adsorption are minimized; and finally, because of the special design of such chambers, they can be vented with the doors closed. In this way the

Figure 1: Railroad Fumigating Plant in Budapest (empty with doors open).
circulatory principle (Kreislaufprinzip) encompasses technical improvements which increase the likelihood of success of the fumigation procedure while, at the same time, significantly reducing the safety hazards. It was these advantages which apparently also motivated the Hungarian State Railways to make the first attempt at the construction of such a facility in Budapest. Already after several months of almost uninterrupted use of the chamber, the elegance and safety of this facility have been clearly recognized.

Figure 2: Interior view of the chamber with three openings in the supply ductwork (on the ceiling) and a return pipe (on the floor)—at the rear wall a powerful blower for mixing and venting.
The plant is used for fumigating railroad passenger coaches as well as for disinfecting freight cars. For the first type of application, one is concerned with bugs (Wanzen) and vermin whereas for the second type of application, one is especially concerned with the extermination of chicken mites (Hühnermilben). The transport of chickens in Hungary leads to a heavy accumulation of mites in the cars used for this purpose which are, as a result, frequently infested, not only within the railroad cars themselves but, also, on the exteriors of the railroad cars. It was precisely for this reason that one had to construct a fumigation tunnel; otherwise the fumigation of only the interiors of the railroad cars would simply not have eliminated these pests.

The accompanying photographs give some idea as to the exemplary manner in which the fumigation plant was actually constructed, structurally as well as technically. (Only the construction of the large doubled door with countless screw joints is unnecessarily cumbersome.) The gas-tightness of the steel-reinforced concrete chamber is so great that when the blowers are turned on inside the closed chamber, the pressure drops almost 200 mm H₂O which is truly remarkable for a room with a volume of 350 cubic meters. The venting as well as the circulation of the air-gas mixture is achieved by a powerful medium-pressure blower which is sized large enough to permit 30 complete air-exchanges per hour. For this purpose, the supply and return ductwork are arranged diametrically, one above the other, (see Figure 2) with appropriate registers or louvers. For a single fumigation, two cans of Zyklon (see Figure 3) are sufficient. The cans are opened in the “apparatus room” inside special gasifiers which are built into a bypass (Nebenschluss) of the circulatory system so that in just a few minutes, all of the gas is drawn out of the cans so that the cans can be removed totally free of poison.

During the cold months of the year, the facility is heated by four furnaces so that the minimum temperature of 20-25°C. (68-78.2°F.) which is necessary for rapid penetration can be achieved quickly and maintained for weeks at a time. The furnaces were specially designed by the Hungarian Korompai, a member of the Board of Public Works (Baurat). They require no service or maintenance for days at a time and are unusually economical to operate.

The chamber operates almost without interruption and is at this time probably the most modern facility of this type.
One special area within the field of pest control for the control of carriers of disease pertains to the disinfestation of transportation vehicles. In this category, the most important above all else are the railroads. Practically all of the civilized nations in the world have dealt with the problem of disinfecting railroad cars, but generally only in a theoretical sense. As a rule, it is less often disinfection, in other words, the sterilization or killing of bacteria which is meant than the extermination of vermin for which, since it is primarily insects and their brood which is involved, the word “disinsection” was coined. Even in Russia, this question was discussed more than 20 years ago and one arrived at the only correct conclusion that, on the basis of all experience up to that time, the disinfestation of railroad cars could only be done thoroughly if one used hydrocyanic acid.

Ever since World War I, this substance, which is gaseous at room temperature, was used as a standard issue preventive substance (flour moth control in large flour mills). Thanks to thorough preliminary studies and the receptiveness of the responsible German authorities one could no longer disregard this gas for use in the food industry. The prejudices and above all the great fear of the “devastating poison” disappeared. During this period (1916) the first hydrocyanic acid fumigation of a military-hospital train took place in Germany and in a rather makeshift manner which was replaced several years later by the German Zyklon method (absorbed liquid hydrocyanic acid) which reduced the danger for well-trained technicians to an absolute minimum.

It was and still is true that of all the methods for the killing of clothes lice, bugs and fleas with larvae, pupae and eggs—the goal is achieved most ideally with hydrocyanic acid gas.

For the practical implementation of such a disinfestation, various approaches to the problem come to mind:

1. Disinfestation in the open without a cover over a thoroughly sealed vehicle which one intends to reuse.
2. Disinfestation in the open with a tent cover over the vehicle.
3. Disinfestation in a gas chamber.
Within Germany proper there was very little reason for intensive pest and vermin control of railroad coaches and freight cars. But the necessity for this was extremely great in several Balkan countries, Spain, Africa and South America where, incidentally, the German methods became predominant. The elimination of disease carriers in the coaches and sleeping compartments often goes hand-in-hand with the extermination of vermin that infest foodstuffs and provisions in freight cars. Of the three methods which have been mentioned, the method which is preferred almost exclusively employs fumigation chambers.

Figure 1: Facility in Budapest—Interior View
Probably the oldest published work on this subject was by Schumacher and is entitled "The Disinfection of Railroad Coaches in Repair Shops." In Europe such chambers exist in Potsdam, Cologne-Nippes, Posen, Zagreb, Budapest, Bucharest, Sarajevo, Skoplje. The most ideal arrangement is a circulatory system, which can handle even the most poisonous substance with ease and safety. There are also fumigation tunnels, as in Sarajevo for example, which can handle two railroad cars at a time. Of importance is the rapid and uniform distribution of the gas by means of circulation ducts or blowers, at least partly because the speed of the operation is the very key to its efficiency. Only relatively small amounts of the gas are necessary for this work. A Zyklon container with 500 grams of hydrocyanic acid is already sufficient to delouse a modern express passenger railroad car (approx. 200 cubic meters); larger containers are used in the fumigation tunnels where 500 to 1000 grams of hydrocyanic acid, depending upon the temperature, are used per 100 cubic meters of interior volume—the higher the temperature, the greater the effect of any given amount of the gas.

Figure 2: Schematic of a Circulatory Facility
Another hydrocyanic acid method which has recently been used here and there is the spreading of Calcid, a powdery cyanide of calcium (zyanwasserstoffsäurem Kalzium), which reacts with the moisture in the air and gives off quantities of hydrocyanic acid but which leaves traces behind whose removal is time-consuming. Because of the greater amounts of material which are needed to achieve an effective gas concentration, one must also expect longer fumigating periods (längere Arbeitsbelastung).

It should also be emphasized that the use of hydrocyanic acid gas, on passenger railroad cars for example, has absolutely no effect on upholstery, leather, fabrics, metals, paints and interior furnishings of any sort.

On June 23, 1942 the Reich Ministry of Transport issued an unpublished decree to plant managers and others which specifies the measures to prevent the spread of typhus (disinfection of passenger cars and freight cars). Only a small number of disinfection substances are mentioned.

In 1941 a decree was published regarding the removal of contagious substances from trains and ships engaged in the transport of livestock within the Generalgouvernement [those parts of German-occupied Poland that were not annexed]15 which specified precisely when and under what circumstances trains had to be immaculately cleaned and disinfected; and also, which chemicals could be used for this purpose. The chemicals which were permitted were primarily a mixture of cresol and sulfuric acid, caustic soda solution, concentrated watersoluble chloride of lime preparations or raw chloramin (Rohchloramin). It can be noted also that a single certifiable cleaning and disinfestation made within the German Reich, would be sufficient [to meet the regulation].

Dry heat together with vacuum (Unterdruck) has been used to disinfest railroad cars. This hot air process has, however, not proven itself successful in the long run; furthermore, it only works in stationary chambers, as long as sufficient fuel is available for heating.

For all practical purposes, the best method for the fumigation of small spaces on ships is probably with T-gas (ethyloxide).

No less important, but particularly during peace time, are the methods for exterminating rats on ships. It is well known that the rats which exist on every large ocean liner can spread the plague bacillus, the germ of this terrible disease, which lives on or in the rat flea. One used to try to kill off the ship rats with makeshift methods. In America one tried at first to use poison gas. Ever since the International Sanitary Convention which was ratified on June 21, 1926 in Paris by most countries of the world6 this despicable dangerous parasite has been fought in an organized fashion. Of course, one has tried to get rid of the rats, as already mentioned,
from ships arriving from countries which may be plague-infested. At this point, the method which comes to mind is the very practical Nocht-Giemsa process (producer gas) which was formerly used in the harbor of Hamburg. The fight against ship rats became a universal responsibility only with the implementation of the international treaty mentioned above which provided for uniform procedures for the control of contagious disease and, of special importance, even went so far as to specify the actual measures for controlling the spread of diseases that are a public menace because of international shipping.

In Germany one worked a great deal with sulfur dioxide (according to the Clayton Method or through the generation of SO\(_2\) from carbon disulfide, Salforkose, and sulfur preparations, etc.), but this was steadily replaced by hydrocyanic acid over the years. The spreading of poisonous bait had only limited success on ocean-going vessels because the rodents within the cabins, galleys, and cargo bays were able to find more suitable food elsewhere. The "rat-proofing" system which was introduced sometime ago in the United States of America did not prove itself over the long run.

This method relied upon simple devices to prevent rats from climbing onto ships at dockside without considering the fact that these animals could also be brought on board with the cargo.

Regarding ship disinfestation in general, hydrocyanic acid won hands down over the competition. Appropriate personnel for the intended tasks are the exterminators, health inspectors and fumigation companies. The certification of the fumigation results is the responsibility of the harbor authorities.

Aside from pest rats—laboratory experiments in Algiers have shown that a single rat may at times carry as many as 2500 fleas and each flea can be the host to 5000 pest bacilli— one must also mention mice (Weilsche disease), lice (typhus), mosquitoes (malaria, yellow fever), and flies (typhoid, dysentery) as carriers of disease on ships. With the regular control of the most dangerous parasites, the rats, one is also controlling all other vermin on board as well; of course, this includes bed bugs, fleas and cockroaches.

Hydrocyanic acid gas kills all vermin including the brood and, because of its great ability to penetrate, is able to fill every space as well as all cracks and hiding places as no other gas available for pest control purposes and, as has already been mentioned, is harmless to furnishings and cargo because of its chemical inactivity. Even foodstuffs need to be removed only if they happen to be uncovered liquids. But, live animals and plants, photographic products, raw coffee and tea must all be removed from aboard ship. For years hydrocyanic acid has been applied in the form of Zyklon. The ship being fumigated must be cleared of all people except for the ship's watch and must be distinguished until the ship is released by means.
of a special flag by day and by a particular light by night.

A few words are still necessary regarding rat elimination from decks with Calcid. On the basis of experience, rats are often present, for example, in the steampipe insulation, under the winches, in the potato bins, lifeboats and similar equipment. For the procedure to be successful, it is necessary to exterminate these as well. Whereas when one is working with Zyklon one simply spreads out the contents of a can upon pieces of paper, on deck one normally uses Calcid tablets [instead] which are ground into a fine powder in a pulverizer and blown onto the locations to be disinfected.

Regarding the hygienic treatment of ocean-going vessels in German harbors, there is a regulation from the Reich Minister of the Interior dated December 21, 1931\textsuperscript{10} in which the extermination of rats is regulated in Paragraph 12.

That the field of hygiene for transportation vehicles has been extended just recently to include airplanes is not really surprising since it has been established that dangerous disease carriers can even be carried by aircraft. The danger is especially great when the airplanes land in regions which are still today a constant source for disease.\textsuperscript{11} In the International Sanitary Treaty for Air Travel of April 12, 1933 (The Hague) a series of preventive measures have been established for the removal of vermin and rats as well as for sanitary services in airports and the possible quarantine of travelers, the treatment of the sick and—under certain circumstances—the pest control of goods and mail. Foremost among the diseases which can be carried are: plague, cholera, yellow fever, typhus and smallpox. In the treaty just mentioned, the controlling substances are not specified. However, at the conference of the International Sanitary Office in Paris in May of 1937 a report from the Quarantine Commission for Air Travel discussed pyrethrum powder, hydrocyanic acid and other fumigating substances for killing mosquitoes on aircraft and also indicated the toxicity of these gases for humans.

In reality, it is very difficult to disinfect aircraft with gas even though it has been done in the past and will continue to be done again many more times. A fumigation of a covered aircraft (often practically impossible because of the often immense proportions of the wings) or an aircraft in a hangar is possible. However, it is necessary to protect the expensive, important, often oil-enclosed and not hermetically sealed instruments in the cockpit; oils can absorb gas—they can even combine chemically with them. Aedes and anopheles, the carriers of yellow fever and malaria, are most effectively destroyed with gas but these species of mosquitoes can also be exterminated with pyrethrum-based insecticides. In the United States one is less particular. Griffiths and Michel\textsuperscript{12} recommend without any reservations the use of hydrocyanic acid
preparations and Carboxide, a mixture similar to the German Cartox which is made from ethyl oxide and carbon dioxide. In South Africa and even North America, airplanes were already treated without any hesitation with Zyklon with special care for the wing interior spaces which could not be sealed. Nonetheless, the use of highly toxic gas (by the natives) in transcontinental air traffic has not yet established itself; similarly, it has not been possible, at least for the time being, to implement the plan to build mosquito-free aircraft.

Before World War II Germany had no special reason to disinfest aircraft for hygienic reasons. However, many experiments had been initiated which could not be completed under the circumstances—otherwise, German discoveries would have certainly pioneered in this field once again.

It is hardly necessary to mention the de-mothing of automobiles (passenger vehicles) and the fumigation of trucks for the extermination of vermin that infest foodstuffs. Clothes moths, including their brood, as well as other vermin which infest foodstuffs and provisions can be easily neutralized with sulfur dioxide (difficult to remove), T-gas and, most of all, hydrocyanic acid. The methods are, as is apparent from the above, simple and safe; but, these measures play almost no role as far as hygiene is concerned. Delousing of passenger vehicles (carriages, streetcars, boats) is regulated by a decree from the Reich Minister of the Interior of February 13, 1941.13

In closing, it should be added that [supposedly] louse-infested railroad trains, airplanes, etc., are in reality often quite harmless because there simply may not even be a single louse present. As Rose14 explains, it is not the suspected means of transportation but quite often it is the louse-infested people themselves in close proximity to one another in overcrowded vehicles who are the true source of the lice. In other words, one should not overestimate the benefits to be derived from disinfesting a totally lifeless transport vehicle.

APPENDIX C
The Epidemiology of Typhus in the Generalgouvernement

by Assistant Physician Prof. Dr. E. Zimmermann (deceased at the front)

Typhus has always reigned as an endemic disease in the Eastern and Southeastern provinces of the former Polish state. This was especially true for the provinces of Wilna, Nowogrodek and
Stanislawow. Here during severe outbreaks, about 5-10% and more of the population would fall ill annually whereas in the Western parts of Poland, the disease declined steadily over the years so that it was virtually unknown in the present Warthegau or else occurred only in isolated cases or clusters without any tendency to spread. During the last years before the present war, the pestilence had almost been eradicated within the central parts of the country, just as conditions in the Eastern parts were also improving. That the present wartime dislocations would again increase the frequency of typhus was to be expected since it had always been a typical plague of war, but the magnitude of the reoccurrence in 1940 was many times less than had been expected. If we adjust the number of previously reported cases [for all of Poland] in order to try to get numbers that only apply to the area of the present day Generalgouvernement—obviously, these values will be only rough approximations in order to be able to make comparisons with those for 1940—we get the following.

Obviously, the statistics cannot show all occurrences which took place because it can be assumed that, at the very least, the undiagnosed, mild cases were not reported. It is quite possible that the true morbidity rates are actually double or triple the values which have been reported.

It is well-known that previously during the world war [World War I], typhus had been widespread on the Eastern front and had caused sickness among our own troops. Then in 1919-1920, the Russian-Polish war came again with great troop movements, refugee treks, food shortages, great poverty and from 1921-1922, the Poles returned in great waves from plague-infested Russia. And so, it is not at all surprising that Typhus exanthematicus developed dramatically at that time. With the gradual consolidation of the
political situation, which resulted in an improvement in the general
gyhic conditions, the pestilence subsided quickly and steadily
until the general economic crisis of 1930-33 with its unemployment
interrupted the favorable progress and brought with it another peak
in typhus mortality in 1934. After that, conditions improved once
again. Although many attempts have been made to try to relate the
reduction of the epidemic to the anti-typhus inoculations given by
Weigl after 1930, the contribution of these inoculations to the
favorable development could only have been rather modest since the
decline of the typhus had already begun earlier. According to Weigl,
67,893 persons had been vaccinated but these were predominantly
doctors, sanitary personnel, civil servants, people close to patients
and others who might be endangered by close contact.

It was inevitable that troop and refugee movements, in addition to
economic difficulties arising from the developments in 1939, would
lead to a reemergence of the epidemic but an ever-increasing
number of cases in strength could only be expected at the beginning
of 1940 since the usual course of the typhus epidemic would
produce many cases. At any rate, since the morbidity rate did not
increase more than usual in 1940 and since our troops were
practically unaffected by the disease, a number of favorable factors
were cited: on the one hand, ideological beliefs of our troops resulted
in less fraternization with the Jewish population, i.e. the carriers of
the epidemic, than during the world war. On the other hand, this
war was over too quickly to allow the disease to establish itself and to
spread. Additionally, this time the refugee treks came, in contrast to
the years after the world war, not from a center of contagion
(Seuchenherd), but from the West, from a region which was free of
the pestilence.

Although it was in the nature of earlier population figures and
epidemiological statistics in Poland that there are no exact numbers
available, nonetheless the Jewish share [[Anteil der Juden] –
emphasized as in the original] in the typhus phenomenon has
obviously always been rather high. Normally it seems to have been
about 70%-80%, but in 1940 the Jewish share in some communities
was 95% or even more of all typhus cases. We personally had the
opportunity to study an outbreak of the epidemic in greatest possible
detail in one town with approximately 30,000 inhabitants of whom
about 11,000 were Jews. Of the 303 cases of the illness, 295 were
among Jews, i.e., 97% among Jews and only 3% among Poles. For
our further investigations it was important that we examined the
significance of age of the people in the homes affected by typhus. A
total of 3,464 Jewish persons, living more or less without any non-
Jewish intermingling, were evaluated statistically.

The mortality of the disease in all these years seems to be
surprisingly low. For the years following the world war, the rate was
7%–9% with the exception of 13.4% for 1920. Thereafter, the mortality rate decreased to 5.2% in 1938 and in 1940 to 5.6%. However, many mild cases may not have been reported so that the hazards of the illness might, in fact, be even less.

If it seemed as if Jews were especially resistant to typhus, that picture changed as soon as age was taken into consideration (Table 2, Column a). More than half of all the cases of illness which were observed by us were of persons less than 20 years of age, and one quarter of the total number of cases occurred among persons between 16 and 20 years of age. It should not be necessary to explain any further that the usually favorable course of the disease for this age group lessened the mortality rate in general. Contrary to the widespread opinion that Jews are less susceptible to typhus, the mortality rate of approximately of 5% for the 16 to 20 year old group and 25-30% for middle-aged adults (Table 2, column C) is absolutely normal. This fact appears favorable only because the typhus of 1940 affected primarily children and adolescents. Perhaps this had also been the case in former years with the exception of 1920 and its higher death rate.

</table>

The high percentage of adolescents among the ill suggests and immunity of adults which might have been acquired during the
epidemic years following the world war which protected them now even though typhus usually produces only limited immunity. This influence can only be examined more closely if we calculate the percentages of the affected within their respective age groups. To begin with, we can make the following estimate. The Jewish population over 20 which might have become immune after the heavy epidemics following the world war could not be more than 1.2 million in the Generalgouvernement. Assuming that 250,000 Jews had become ill at that time, then one can estimate very roughly that 25-30% of those who are 20 years old today would be immune while all the others in this age group and practically all adolescents in 1940 would have been susceptible. Our age calculations (Table 2, Column B) gave indeed few differentials which could have been appraised as partial immunity of the 20-year olds. The percentage of the 16-20 year olds is conspicuously high because 77 out of 369 from the age group fell ill, while the 15 year olds might either have an inborn immunity or the illness developed abortive, which is typical at this age, and remained undiscovered. It is, however, a fact that in the beginning of 1940 enough people susceptible for the epidemic were available to spread the ground for epidemics during the next year.

In the area for which we were responsible—about a quarter of the Generalgouvernement—according to statistics and reports from doctors, typhus had occurred only sporadically before the year 1940. This was also evident from the fact that the younger people among them were not personally acquainted with the clinical facts of Typhus exanthematicus. Only a few towns showed an unexplained slight increase of morbidity during 1938 and 1939, while only only half a dozen cases showed up in towns with 10,000 to 20,000 inhabitants.

Thus, the winter of 1939/40 started at first with only a very limited number of cases. Only in 1940 did isolated cases occur at the same time or quickly following each other, mostly in small towns, in many cases in villages which had until now been untouched by the pestilence and which were far removed from each other. Of course, a carrier of typhus-infected lice who might have caused the outbreak during his wanderings was suspected, but this explanation remained unsatisfactory for all practical purposes. Very often the villages affected were 100 to 200 kilometers apart and it seemed unlikely that at a time of unusually severe cold with masses of snow that a person might have gone wandering over such great distances. It seemed much more likely that several virus carriers were wandering around who had sought shelter because of the weather conditions and had left the infection behind. Beggars and tramps have traditionally been the most important carriers. But it also has to be remembered for the first cases of an epidemic that a virus can remain alive in the lice excrements on clothing for a long time and
that the re-use of winter clothing might result in new infections. Experiments conducted by Weigl showed that the virus is capable of infecting for several months.

After only a few individual cases had occurred in January and the beginning of February, the interconnection of which was unclear, the further course of the pestilence could be observed accurately. Sometimes the illness disappeared by itself, even without special protective measures being taken. In other cases, there were cases within the vicinity or greater outbreaks, these only in towns and often it could be verified how the typhus had been carried from one community to another. Very often, but not always, beggars and vagabonds were involved, but the principle cause was the lively Jewish wandering which still prevailed at that time. The elders of the Jewish communities were supposed to care for these wanderers, but this care often failed, since Jewish solidarity was definitely not always as dependable in crisis as it should have been (Notfest), to include practical measures of disease prevention. Arrivals were very often considered and treated as unwanted guests in the communities. They were quickly urged to go away again with a small contribution and thereby promoted the wanderings. In other cases they were housed in mass quarters which quite frequently developed into terrible epidemic hotbeds. In extreme cases only 3-4 square meters of floor space and even less were made available per person.

Smaller communities with less than 7000 inhabitants and the flat countryside were generally at first hardly affected by the epidemic. Only in April and May, when under the influence of countermeasures and other factors, the Typhus exanthematicus started to subside in the cities, several small farming communities were affected, even if the occurrences were limited to isolated cases. Here too, it was mostly Jews who became ill, but the Polish share was greater than in the cities. With regard to the unpleasant result that the typhus spread to the countryside and therefore evaded the measures used to combat the epidemic, this was caused to a significant degree by the fact that many Jews had succeeded in breaking out of the quarantine zones in the cities. Very often the inhabitants of a community could give very exact information as to who had brought the disease. Not infrequently, however, it was the Polish farmer who brought a typhus infection upon himself when he, as was customary, without comprehending the precariousness of his acts, took a wandering Jew along on his vehicle for a ride for part of journey.

As the month of May came to an end, the illnesses in the cities decreased markedly but the countryside was still very much affected. Numerically the high point had passed but the danger that farming communities would be dangerous endemic centers of
contagion was not eliminated. Contrary to expectations and without any apparent reason, the number of affected persons declined suddenly in the second half of June in the countryside. Since for a long time already, about 20-25 small towns had been identified in which new cases were reported, the number suddenly fell back to 5 or 6. Shortly before there had been an increase in the summer temperatures and perhaps the increased formation of perspiration diminished the multiplication of lice and consequently the virus. This development was of course consistent with the usual decline for the disease during the summer months but the simultaneous decline over a wide area was striking, nevertheless, on the whole, the course of the epidemic was more or less typical because the late winter and early spring months had, just as during many other typhus outbreaks, brought the peak of the illnesses.

The subsequent course of the epidemic for the rest of the year 1940 was typical also. The summer months showed only isolated cases and it was only the month of November which slowly brought once again the winter rise of the pestilence.

**Summary**

1. The epidemiological circumstances of typhus in the Generalgouvernement in the year 1940 were examined thoroughly.
2. The results showed that the highest number of cases occurred within the age groups of 16-20, and that the percentage of Jews affected by typhus was on the average 70-80%, in some communities even 95-97%.
3. The mortality rate generally grew with increasing age. It was no less for Jews than for non-Jews.
BEHIND THE BALFOUR DECLARATION
THE ORIGINS OF TODAY’S MIDEAST CRISIS — Robert John

Few documents have had as shadowy a past—or as ominous a future—as the wartime pledge of the government of His Britannic Majesty George V to the Jewish financier of the famous House of Rothschild. By it the British Empire—the greatest the world has ever seen—broke its prior promise to the Arabs, to court a mightier power by far, which even then exercised a golden sway over private policy and public opinion around the world. In the name of the Jewish people, international Zionism won a foothold in Palestine.

Arthur Balfour’s letter to Lord Rothschild—the culmination of years of intrigue—laid the groundwork for the dramatic birth of Israel in 1948, for the dispossession of the Palestinians, for the five Israeli wars which have followed, and for the gradual but ever deepening involvement of America in the Middle East morass.

The Balfour Declaration began the West’s betrayal of Palestine’s Arabs—it ensured the mighty Palestinian uprisings of 1929, 1936, and today’s massive intifada, as rock-throwing Arab children brave the beatings and bullets of the Zionist occupiers.

Robert John’s Behind the Balfour Declaration reveals the shadowy—and shocking—maneuverings which resulted in the British promise to the Zionists. Dr. John, a specialist in Palestinian history, traces the moves by which Zionist negotiators like Chaim Weizmann and Louis Brandeis brought forward the work of Zionism’s founder, Theodore Herzl, playing off empire against empire, dealing in secret over the heads of elected leaders of sovereign nations, to extract the guarantee which has changed the face of the Middle East and the world. Reviewed by Charles E. Weber

A half century ago, on the night of 9-10 November 1938, destructive riots against Jews, their stores and synagogues broke out in many German cities. The windows of many Jewish stores were broken and as a result this night is often designated ironically as "Reichskristallnacht" (National Crystal Night), referring to the glittering broken glass. The year 1938 was an eventful year in Europe. In April Austria had been incorporated into the Reich (der Anschluss) amidst great general rejoicing of the populace. On 29 September, Great Britain, France and Italy recognized the justification of the German desire to incorporate the areas in the periphery of Bohemia (Sudetenland) into the Reich. These areas were inhabited almost exclusively by ethnic Germans who resented oppression by the Slavic majority in Czechoslovakia. As a result of this recognition, the Munich Agreement, the Sudetenland was ceded by Czechoslovakia to Germany.

Miss Weckert's book raises many questions about the tragic, portentous events of 9 November 1938, to which she does not claim to know all of the answers with absolute certainty, even if she effectively disputes a number of widely held, erroneous opinions about these events. Who were the real instigators of the riots? What were their real motives? Who was behind the assassination of Ernst vom Rath, a German diplomat in Paris, on the morning of 7 November 1938? What were the objectives of the people who must have supported the young Jewish assassin, Herschel Grynszpan? What happened to him after the assassination? What was the extent of property damage caused by riots and what were the results of physical attacks on Jews? How did such German leaders as Hitler, Goebbels and Göring react to the riots and to what extent, if any, were they themselves instigators of the riots? What had been the policies of the German government with regard to the small but wealthy and influential Jewish minority in Germany before the riots (i.e., during 1933-1938)? How did the riots change these policies? To what extent did the objectives of the National Socialists and of the
Zionists coincide? To what extent did Zionists and National Socialist Germany collaborate in achieving these objectives on the basis of formal agreements? How did the policies of the German and Polish governments clash? What characteristics of the relation of Jews to their host populations could have contributed to causing the riots?

The book is introduced by a statement (pp. 7-14) by Wilfred von Ofen, who was on Goebbels' staff during the last two years of the war. He asserts that there is no credible evidence that Goebbels was the instigator of the riots and points out that during the Spanish Civil War, in which he served, hundreds of Christian churches were burned or desecrated by the Communists. Furthermore, von Ofen cites a conversation between Goebbels and the president of the Berlin police, Count Helldorf, which was overheard by Friedrich Christian, Prince of Schaumburg-Lippe, in which Goebbels angrily characterized the riots as "idiocy" and grist for propaganda mills hostile to Germany.

Weckert begins her text (p. 15) with the statement that her investigation has primarily resulted in a posing of questions, some of which can never be answered with absolute certainty in view of the lack of available documentary evidence.

On 15 October 1938 the Polish government, which was hostile to Jews and wanted them to emigrate from Poland, announced its intention to invalidate the passports of the many Jews from Poland residing in Germany (!) if such passports were not presented to Polish authorities. In effect, the Polish government thus wanted to prevent these Jews from returning to Poland and to make them a permanent burden on the Reich. As a result, the Jewish policies of the German and Polish governments clashed, since they both wanted Jews to emigrate. Herschel Grynszpan, whose parents were transported to the Polish border as a result of the passport crisis, went to the German embassy in Paris and shot a German official, Ernst vom Rath, on 7 November, 1938. His victim died of wounds on 9 November. Grynszpan was arrested by the Parisian police but, strangely, survived the war after postponements of trials.

Now (pp. 37 ff.) Weckert turns back to the Jewish "declaration of war" against Germany announced in the London Daily Express of March 1933, involving a boycott of German goods, a painful measure, since Germany had to (and still must) export or starve. Leading Jews outside of Germany, such as Samuel Untermeyer, then joined the incitement against Germany, even long before the Nuremberg laws of 1935. Many Jews in Germany itself reacted in astonishment and with discomfort at such incitement against Germany and asked that Jews outside of Germany cease the incitement. The Germans undertook a mild countermeasure, a one-day boycott of Jewish businesses on Saturday (!), 1 April 1933. Jabotinsky, a leading Zionist born in Russia, joined forces with
Untermeyer to continue ruthlessly the boycott of German goods. In 1936 a Jew, David Frankfurter, murdered a prominent National Socialist in Switzerland, Wilhelm Gustloff (pp. 69-71). This crime had some rather striking similarities to the murder of Ernst vom Rath in 1938 and also seems to have been supported by an organization, the identity of which cannot be definitely established, but could very well be presumed to have been the LICA (Ligue international contre l'antisémitisme) in Paris. The influential Völkischer Beobachter of 8 November, 1938 called attention to the similarities of the crimes committed by Frankfurter and Grynszpan. In conjunction with the account of the murder of Wilhelm Gustloff, it might have been pointed out that Gustloff was such an important man that a large passenger ship was named for him in 1937, which was sunk in 1945 with a huge loss of life.

Much of this book seems almost like a fictional murder mystery, but of course far, far more is involved here. The question of the responsibility for the "Reichskristallnacht" is of great importance for the political, economic and psychological well-being, not only of the German nation, but of all Aryan nations because this question has to do with their unity and cooperation.

Weckert attempts to establish this responsibility, as far as that is presently possible, by various approaches, the most important of which are:

1. Examination of available information as to what German leaders (Hitler, Göring, Goebbels, Himmler, Heydrich, et al.) were doing and where they were on the night of 9 November 1938.
2. Ascertaining their attitudes toward the riots after they took place.
3. Examination of what various persons and groups (notably the Zionists) had to gain or lose by the riots and their economic effects (cui bono?).
4. Examination of the evidence and testimony from trials and investigations conducted by the National Socialist government itself shortly after the riots.
5. Examination of the evidence and testimony brought out by postwar trials conducted by Allied authorities and German courts.
6. Pointing out mistakes in logic and interpretation of evidence made by various historians and propagandists hostile to National Socialism as well as the conflicting nature of their writings.
7. Investigation of the authenticity of various key documents and the reliability of various witnesses.

The ninth of November 1938 was the day on which prominent National Socialists gathered in Munich to celebrate the fifteenth
anniversary of the march on the Feldherrnhalle in 1923, but during
the course of the day mysterious strangers had appeared in towns in
Hesse to urge violence against Jewish property (pp. 77 ff., 125-126).
An SA Standartenführer in Marburg refused to destroy the
synagogue there.

Weckert pokes fun at the conflicting accounts of various
historians, especially with regard to the role of Reinhard Heydrich
(1904-1942; head of the Sicherheitspolizei, murdered in 1942 when
he was Deputy Reichsprotector of Bohemia and Moravia). Her
discussions of the inconsistencies and absurdities of various
historians' accounts of Heydrich's role, or lack of it, in the riots are
written with irony and even a bit of humor (pp. 89-96). She continues
in her next section (pp.96-103) with a refutation of the writings and
methods of various historians, but particularly those of Hermann
Graml, whose book on the "Reichskristallnacht" appeared in 1958
and is also discussed by Weckert in many parts of her book.

One of the most important questions with which the book deals is
the actual extent of property damage and the number of killings
resultant from the riots (pp. 127-143, 181-188, 207). The data from
various (allegedly!) German sources alone is conflicting and
dependent on such questions as to what constituted a synagogue and
how many were later destroyed by Allied bombings. If there were
177 synagogues destroyed and there had been 1420, that would be
approximately 12% destroyed (p. 135). One report mentions 844
destroyed shops and department stores, another report mentions
7,500. Even if the latter figure were correct, it would represent 7 1/2%
of the total. One report mentions 36 killings, another 91.

Of 28 Sturmabteilung (SA) Gruppen, only three are reported to
have participated in destructive actions (p.174). If 7,000
 demonstrators were involved, that would be only 1/100 of 1% of the
German population of that time.

The author, who studied Hebrew and later lived in Israel for quite
some time, devotes a section (pp. 209-216) to the relation of Jews to
their host populations. She points out the ancient religious factors
causing hostility toward Jews and Jews' distancing themselves from
their host populations with the resultant rise of Zionism, which, in
turn, was in agreement with National Socialist efforts to help Jews to
emigrate. Even today laws pertaining to citizenship in Israel have a
strong similarity to the much maligned Nuremberg Laws of 1935. It
seems to me that Weckert should also have mentioned two powerful
sources of hostility toward Jews after 1917, the role attributed to
Jews in the brutality of the Communist revolution and the earlier
years of Soviet government and the perception that Jews enriched
themselves by the hyperinflations in many European countries in
the early 1920s.

The author's conclusions are summarized on pp. 251-273:
Actually, there is no absolute certainty as to the responsibility for the "Reichskristallnacht." She argues effectively that there can be little doubt about the complicity of the LICA in the murder of vom Rath and points out the enigmatic survival of the young Jew who murdered him. The question of who paid the great costs of Grynszpan's poor parents' emigration to Palestine also suggests the complicity of a financially powerful organization. There was apparently a need felt by some Zionists, such as Jabotinsky, for a murder of a prominent German official by a Jew and vom Rath just happened to be the victim. If the objective of the murder had been to precipitate a pogrom in Germany, there were a number of historical antecedents, such as the murder of Tsar Alexander II in 1881. (The reaction of the Russian government to this crime, we might note in passing, stimulated a huge migration of Jews to the United States.)

If the riots against Jews in Germany had been instigated by the National Socialist government itself, such an action would have been met with so little approval on the part of the German population as a whole that it would have caused a decline in popular support of the National Socialist Party, as its leading figures knew very well. Not only Zionists, but also other groups inside and outside of Germany looked on any trouble for National Socialism as being to their advantage. Hitler himself ordered a cessation of the violence against Jews, as is clearly shown by the teletyped message from Hitler's office reproduced on page 117. Himmler ordered the SS and German police to be responsible for protecting Jews.

One result of the riots was an intensified effort to assist Jews to emigrate by economic aid and affording them the opportunity of transferring their assets abroad. A major factor frustrating this effort was the lack of willingness of other countries to accept Jewish immigrants, as the Evian Conference had shown in the summer of 1938 (p. 227). In the summer of 1940 Heydrich, who had been made head of the Reichszentrale für die jüdische Auswanderung in 1939, wrote to Ribbentrop and acknowledged that an emigration of Jews (the real meaning of the term Endlösung, the "final solution") had been brought largely to a standstill and that a territorial resettlement would have to serve as a substitute measure to clear the Reich of Jews. Even the record of the Wannsee Conference of 20 January, 1942 confirms this. Many Germans witnessed the glass on the sidewalks on the morning of 10 November, 1938 and the exaggeration of the events of the previous night have been a powerful tool for instilling a feeling of guilt in the German population after the war, even though there is no proof that leading figures of the National Socialist government were the instigators.

Pages 283-301 contain notes and an extensive bibliography.

There are a number of minor errors in the book which might have been eliminated by a more thorough proofreading. On page 77, line
6, the word Vortag would make sense after am. Evian is in France, not Switzerland (p. 227).

Ingrid Weckert's Feuerzeichen is a lucid work obviously based on years of energetic research. It is of primary significance for understanding correctly and in a proper perspective not only the details of the events of 9 November 1938, as far as that is presently possible; it also contains a wealth of incisively presented background material and analysis of the results of those events, which contributed to touching off an avalanche of suffering, far more on the part of Aryans than of Jews themselves. Feuerzeichen effectively refutes much careless, malicious or mendacious nonsense that has been written and spoken about the "Reichskristallnacht." It deserves to be translated into English.

[Feuerzeichen may be ordered from IHR, 1822½ Newport Blvd., Suite 191, Costa Mesa, CA 92627.]
The Institute for Historical Review has recently received copies of a transcript of a sworn interrogation of Simon Wiesenthal, which was conducted in 1948. The copies, certified as “true and correct,” were obtained from the National Archives in Washington, D.C. To our knowledge this transcript has never been published or cited, in whole or in part. The interrogation contains statements by Simon Wiesenthal which may shed new light on his activities during the Second World War. A comparison of these statements with certain other sworn statements of Wiesenthal and with his account of the period 1939-1945 in his memoirs reveals a number of discrepancies which raise new doubts about Wiesenthal’s credibility as to his activities during the war.

Simon Wiesenthal is the world’s most famous “Nazi”-hunter. His claim to have brought Adolf Eichmann and more than a thousand other Third-Reich “war criminals” to justice has become the stuff of popular myth, familiar to tens of millions through his own writings as well as through fictionalized treatments of his career in bestselling thrillers and film and television hits. Wiesenthal’s activities and example, more than those of any other man, have kept alive and institutionalized the international drive to track down and punish Germans and others alleged to have persecuted Jews during the Second World War. Few men of the postwar era have been honored as frequently as has Wiesenthal: a list of his decorations, medals, orders, and honorary degrees, including a special gold medal awarded by the U.S. Congress and presented him by a teary-eyed President Jimmy Carter, would fill two pages in this journal.

Fundamental to Simon Wiesenthal’s moral authority as a “Nazi”-hunter, and serving also as the basis for his expertise on the crimes and criminals of Axis Europe, has been the story of his experiences at the hands of the Germans during the war. According to Wiesenthal’s public account of his war years, as told in his The Murderers Among Us, and repeated in countless speeches and interviews, he endured almost continual suffering as a German

prisoner from July 1941 to May 1945, when he was liberated by American troops at Mauthausen. His time as a concentration camp inmate and "slave" laborer, his numerous narrow escapes from execution by his captors, and his witness to countless crimes and atrocities carried out against other Jews stamp him not merely as a survivor but as an accuser and avenger.

While doubts and even accusations have been raised in the past as to Wiesenthal's conduct during the war years, there has so far been no hard evidence made public in support of allegations, frequently raised, that Wiesenthal "collaborated" with the Germans. Nor, to our knowledge, has an exhaustive comparison of Wiesenthal's separate statements on his wartime experiences been undertaken.

**New Evidence**

Last spring IHR was able to obtain a certified copy of a transcript of an interrogation which took place on two consecutive days, May 27 and May 28, 1948. The interrogator was Curt Ponger; the man Ponger was questioning, Simon Wiesenthal. The interrogation is described as having been brought about by (auf Veranlassung von) a Mr. Niederman, and was recorded stenographically by M. Fritsche. There is no indication of the place where the interrogation took place.

The transcript of that portion of the interrogation which took place on May 27, between 11 and 12 o'clock, runs to nine-and-a-half, double-spaced, typewritten, 8½ x 11-inch pages. That of the following day, which was conducted between 11:30 and 12 o'clock (both times are presumably A.M., although this is not explicitly stated) covers nearly seven pages identical in size and format to the transcript of the first day's interrogation.

The May 27 transcript consists of twenty-eight questions and answers, that of May 28, twenty questions and answers. Answer No. 4 of the first day's interrogation is this statement by Simon Wiesenthal: "I swear by the Almighty and All-knowing God that I will say the absolute truth, conceal nothing and add nothing, so help me God" (Ych schwoere bei Gott dem Allmaechtigen und Allwissenden, dass ich die reine Wahrheit sagen, nichts verschweigen und nichts hinzufuegen werde, so wahr mir Gott helfe").

**Discrepancies**

Among the sworn statements made by Simon Wiesenthal during this investigation are:

- that he was employed as a "Soviet chief engineer in Lvov [in German: Lemberg; in Polish: Lwów; in Ukrainian: Lviv] and Odessa" during the Soviet occupation of September 1939-June 1941;
- that he served as first a lieutenant and then a major in a Soviet
partisan unit following his escape from German custody in October 1943;
—that he was about to be executed by the Germans as a partisan leader but was able to save his life by joining a group of Jews in German custody.

These sworn statements conflict with Simon Wiesenthal's account of his wartime years presented in The Murderers Among Us, his published memoirs, and with certain other sworn statements Wiesenthal has made regarding his war years. The above discrepancies, and a number of others evident when Wiesenthal's several accounts of his activities between September 1939 and May 1945 are compared, raise grave doubts as to the "Nazi"-hunter's credibility, and prompt a further question: What did Simon Wiesenthal actually do during the Second World War?

Three Stories Compared

In the following pages we have attempted a preliminary comparison of three different reports, each of which is an authoritative statement by Simon Wiesenthal. The reports are:
— the 1948 interrogation of Wiesenthal described above;
— a sworn statement which Wiesenthal submitted to the West German government when applying for reparations in 1954;²
— and the account of his wartime years which appears in The Murderers Among Us: The Simon Wiesenthal Memoirs, published in English in 1967.³

It should be stated at the outset that the aim in comparing these statements is not to attempt to impeach Wiesenthal's credibility by fastening on unimportant differences in detail, or by stressing omissions which may be understandable in view of the differing length and purpose of these documents. Nor is it implied that any of Simon Wiesenthal's statements, even when corresponding in the several documents, is to be taken at face value.

The Period September 1939-June 1941

During this period Simon Wiesenthal claims to have been a resident of Lvov, the metropolis of Galicia, which had been part of post-World-War-I Poland until, in consequence of the partition of Poland agreed on by Germany and the USSR in August 1939, it was occupied by the Soviets the following month. According to The Murderers Among Us, Wiesenthal, as a "bourgeois" Jew (with his own architectural practice), ran the danger of being arrested by the NKVD, the Soviet secret police. We learn that both his stepfather and his stepbrother were arrested: the stepfather later died in jail and the stepbrother was eventually shot
by the Soviets. The account of Wiesenthal's time under Soviet rule continues:

The Russians issued many "bourgeois" Jews so-called Paragraph 11 passports, which made them underprivileged, second-class citizens, not permitted to live in larger cities or within a hundred kilometers of any border. They lost good jobs and had their bank accounts confiscated. Proving himself a resourceful man under pressure, Wiesenthal bribed an NKVD commissar and obtained regular passports for himself, his wife, and his mother. A few months later, all Jews with "Paragraph 11" passports were deported to Siberia, where many died. The Wiesenthals managed to stay in Lwow, but Wiesenthal's days as an independent architect were over. He was glad to find a badly paid job as a mechanic in a factory that produced bedsprings.4

Wiesenthal gives a rather different statement as to his position under the Soviet regime in his 1948 interrogation. There he sums up his activities during the Soviet occupation in these words: ". . . between 1939-1941 Soviet chief engineer working in Lwow and Odessa" (". . . zwischen 1939-1941 sowjetischer Hauptingenieur in Lemberg und Odessa").5

These two contrasting statements suggest several questions. Is the evident discrepancy to be accounted for by Wiesenthal's desire to present himself in his memoirs, published during the "Cold War," as primarily a victim of the Soviet regime, who narrowly escaped the fate of his stepfamily? Has he lied about "the badly paid job as a mechanic in a factory that produced bedsprings"? If it is true that Wiesenthal avoided deportation to Siberia for himself, his wife, and his mother by bribing an NKVD commissar, how much more might this "bourgeois" Jew have had to pay to obtain a position as a "Soviet chief engineer"? Or, finally, are we to understand that Wiesenthal's "collaboration" with the Soviet invaders was occasioned by a mutual sympathy between the Jewish "bourgeois" and the Communist invaders?

**Escape from Lwow to the Partisans (?), October 1943**

On June 22, 1941 the Germans and their allies invaded the Soviet Union; eight days later the first Germans entered Lwow. Just before they left, the Soviet authorities had massacred several thousand political opponents in the city's prisons. Most of the victims were Ukrainian nationalists, and the discovery of the slaughter unleashed a pogrom of epic proportions against the Jews of Lwow, who were hated by many of the city's Poles and Ukrainians for their Soviet sympathies and for their enthusiastic cooperation with the NKVD.6

Simon Wiesenthal came into the hands of the Germans in early July 1941, by his telling. The three statements compared in this article mention at least two different arrests, one by Ukrainian auxiliary police, after which Wiesenthal claims to have narrowly

A. Ja. Volksschule in Wien besucht und Gymnasium in Buczacz, dann die Technische Hochschule in Prag/Tschechoslowakei im Jahre 1932 diplomiert. Bis 1939 in Polen als Dipl.Ing. Architekt tätig, zwischen 1939-1941 sowjetischer Haupt-
escaped death; the other by soldiers of the Wehrmacht, who rounded up Wiesenthal and other Jews for hard labor at the railway yard. Here is not the place to analyze the conflicting accounts or to evaluate their credibility; nor to examine in depth Wiesenthal's stories as to his activities from July 1941 to October 1943, during which time he claims to have worked, first as a sign-painter, then as a draftsman, at the Ostbahn Ausbesserungswerk (Eastern Railroad Repair Works—OAW). For the purposes of this study it is enough to state that in his memoirs, Wiesenthal claims to have been in close cooperation with the Polish underground while at the OAW, and to have supplied them with detailed maps showing the vulnerable points of the Lvov railway junction.\(^7\) He further alleges that he became so friendly with a sympathetic National Socialist superior, Oberinspektor Adolf Kohlrautz, that Kohlrautz permitted Wiesenthal to conceal two pistols in his (Kohlrautz’s) desk.\(^8\)

According to the shortest account of his escape and recapture, Wiesenthal's 1954 sworn application for reparations:

On October 17, 1943, immediately before the imminent liquidation of the Lvov camp, I fled from the camp and hid myself in a barn at acquaintances in the vicinity of Lvov. On January 13, 1944, on the occasion of a close search of this locality by the SD and Gestapo, I was discovered and committed to the Lacki Gestapo prison in Lvov.\(^9\)

That there is little chance of a casual mistake in the dates is shown by an affidavit which immediately follows the reparations application:

I hereby affirm in lieu of oath that I was interned in the Lvov forced labor camp from October 20, 1941 until my escape on October 17, 1943.

I further affirm that—after I was caught—I was in custody on January 13, 1944 until March 19, 1944 in the Gestapo prison in Lvov on Lacki Street.

(Ich versichere hiermit an Eides statt, daß ich im Zwangsarbeitslager Lemberg vom 20. Oktober 1941 bis zu meiner Flucht am 17. Oktober 1943 inhaftiert war.

In each of the other two Wiesenthal statements under analysis, the “Nazi”-hunter claims to have escaped from German custody in Lvov on October 2, 1943. The date of his recapture is given in both these
statements as June 13, 1944, exactly five months later than the date claimed in Wiesenthal's reparations application. Other than this agreement as to dates, Wiesenthal's 1948 interrogation and his memoirs differ in virtually every particular.

According to Wiesenthal's memoirs, in late September 1943 Wiesenthal and the other Jews working at the OAW were ordered to be sent under guard nightly to the Lvov (Lemberg) concentration camp. Sensing his impending doom, Wiesenthal prepared his escape. The obliging Kohlrautz, "who often permitted him to go to town to buy drafting supplies," arranged for Wiesenthal to be accompanied by a "stupid-looking Ukrainian" policeman on a shopping expedition with Arthur Scheiman, another Jewish inmate. Naturally Kohlrautz permitted Wiesenthal to retrieve the two pistols he had hidden in the "good Nazi"'s desk.

After giving their escort the slip, Wiesenthal and Scheiman repaired to the Lvov apartment of a friend in the "Polish underground" (precisely which political affiliation is left unstated). After some days of concealment there and in Scheiman's house in the country, Wiesenthal and Scheiman found shelter in an apartment of other "friends," where the two hid out under the floorboards until their recapture. Wiesenthal possessed not only arms but a diary and "a list of SS guards and their crimes that he'd compiled, believing that one day it might be useful." On the evening of June 13, 1944 Wiesenthal was discovered under the floor, in possession of his pistol, diary, and list of SS men by two Polish plainclothes detectives and an SS man. Thus Wiesenthal's story as presented in The Murderers Among Us.¹¹

During the next day's interrogation session, Wiesenthal went into much more detail. Aside from facing Ukrainian police formations and the Ukrainian-manned SS "Galicia" division, Wiesenthal's unit fought mostly against partisans from the UPA, or Ukrainian Insurgent Army, the military arm of the Ukrainian nationalist movement. According to Wiesenthal, as the Germans fell back and the front moved nearer at the start of 1944, the situation in his sector grew so chaotic that Soviet aircraft sometimes bombed his unit by mistake. With four or five different partisan groups at large in the same territory, "In January 1944 there was such confusion that one didn't know who was for him and who was against him. Whoever so much as stuck his head out of the woods would be shot at" ("Es war im Januar 1944 so ein Durcheinander, dass man nicht wusste, wer
mit wem und wer gegen wen war. Wer nur seinen Kopf aus dem Wald streckte, auf den wurde geschossen). After informing his interrogator that his partisan unit paid local farmers in dollars for provisions, Wiesenthal was asked: “Where did you get the dollars?” (“Woher bekamen Sie die Dollar?”). He answered as follows:

The Russian partisans had dollars, usually 100-dollar bills. We buried at least 70-80 thousand dollars. In any event the Russian liaison man with us always had enough dollars available . . .

(Die russischen Partisanen haben Dollar gehabt, meistenteils 100-Dollarstuecke. Wir haben mindestens 70-80 Tausend Dollarnoten vergraben. Jedenfalls der russische Verbindungsmann, der mit uns war, hat immer genug Dollar zur Verfuegung gehabt . . .). As asked about the rank he held, Wiesenthal answered this way:

I had a high rank, I was immediately made a lieutenant on the basis of my intellect, then was promoted to major, and finally the commander said “If you come through this alive, then you're a lieutenant colonel.” I helped very much in building bunkers and fortification lines. We had fabulous bunker constructions. My rank was not so much as a strategic expert as a technical expert.

Although Wiesenthal never states explicitly the affiliation of his partisan unit, it seems clear from his remarks that it was part of the Armia Ludowa (People’s Army), the Soviet-organized and -manned “Polish” guerrilla force. After his unit was surrounded in February, and forced to split up and escape through the German lines, Wiesenthal describes being hidden by friends in Lvov as follows:

We knew addresses, KIGNI - - - was the liaison man between AK and us. The sharp differences between AK and AL didn't exist yet. AK was nationalist and antisemitic and AL was not antisemitic. AK thus took in Jews in Lemberg, since the pressure of the Germans in Lvov was much stronger than in any other district.

(Wir wussten Adressen, KIGNI - - - war der Verbindungsmann zwischen AK und uns. Die krassen Unterschiede zwischen AK und AL war noch nicht. AK war national und antisemitisch und AL war nicht antisemitisch. AK hat in Lemberg deshalb Juden aufgenommen, weil der Druck der Deutschen in Lemberg viel staerker war wie in irgendeinem anderen Gebiet.)

From the context, and in view of Wiesenthal’s earlier statements concerning his unit, as to “the Russian partisans” and “the Russian
liaison man,” “us” in the above passage would seem to refer to the AL, the military arm of the Communist regime the Soviets were to install in Poland at the end of the war.

Whatever the precise identity of the partisan group Wiesenthal claims to have served in, the question remains: Which, if any, of Wiesenthal's accounts of what he was doing between October 1943 and June (or is it January) 1944 is to be believed?

In the Hands of the Gestapo(?)

As has been mentioned, Wiesenthal claims in his memoirs to have been recaptured in an apartment in Lvov, with a pistol, a diary, and a list of SS men and their crimes, by two Polish detectives and an SS man on June 13, 1944. This version contrasts markedly with Wiesenthal's affirmation in 1954 that his recapture took place in a barn near Lemberg, where he claims to have been discovered by the Gestapo and the SD (Sicherheitsdienst, the security service of the German National Socialist Workers' Party) on January 13, 1944 (see above).

That Wiesenthal's sworn 1948 account of his recapture differs, once more, from his other stories will by now probably not surprise the reader. To be sure, his 1948 version exhibits similarities to that in The Murderers Among Us: he is captured, armed, hiding under the floor in an apartment in Lvov on June 13, 1944. According to his 1948 interrogation, however, Wiesenthal had on him not a diary and a list of SS misdeeds, but “different notes,” “certain notes regarding the entire partisan area of operations” (“verschiedene Aufzeichnungen,” “gewisse Aufzeichnungen ueber das gesamte Partisanengebiet”).

Both in 1948 and when composing his memoirs, Wiesenthal was quite conscious that the fate of an escaped Jew who had fallen into the hands of the Germans in 1944 armed with a pistol and either a list of SS war criminals or detailed notes on partisan activity would be regarded as rather precarious. In the memoirs, Wiesenthal is taken to a police outpost on Smolki Square, where he has his first bit of good fortune, for unbeknownst to the SS man, a venal Polish policeman relieves him of his pistol: “If a German had found the gun, he would have shot Wiesenthal at once.”

Then:

From Smolki Square, Wiesenthal was taken back to the concentration camp. Only a few Jews had survived: tailors, shoemakers, plumbers—artisans the SS still needed for a while. Wiesenthal knew that after reading his diary and his list of SS torturers with specific details, the Gestapo would have enough evidence to hang him ten times.

According to both his memoirs and his 1948 interrogation, Wiesenthal staved off a quick execution by slashing his wrists. Even
then, according to his 1948 version, it was his notes on partisan operations which saved him:

... I owe it especially to this circumstance that I wasn't killed immediately like so many Jews, since the notes appeared to be very valuable and therefore I entered the hospital after my suicide attempt. It was very rare that a Jew was admitted to a prison hospital.

(. . . diesem Umstand verdanke ich speziell, dass ich nicht gleich wie sowieJude umgelegt wurde, denn die Aufzeichnungen schienen sehr wertvoll zu sein und darum kam ich in ein Gefaengnisspital, nach dem von mir veruebten Selbstmordversuch. Das war ein sehr seltener Fall, dass ein Jude in ein Gefaengnisspital kam.)

In The Murderers Among Us Wiesenthal's suicide attempt is prompted by the appearance of SS Oberscharführer Oskar Waltke, "perhaps the most feared man in Lvov." Waltke, against whom Wiesenthal testified at his 1962 trial in Germany, is described in the following chilling terms:

Waltke, a cold, mechanical sadist, was in charge of the Gestapo's Jewish Affairs Section in Lwow. His speciality was to make Jews with false Polish papers confess they were Jews. He tortured his victims until they made the admission and then he sent them to be shot. He also tortured many Gentiles until they admitted to being Jews just to get it over with. Waltke's name had been on Wiesenthal's private list, which Waltke must have studied with great interest. Wiesenthal knew that Waltke wouldn't simply have him shot. He would first submit him to his very special treatment. As Wiesenthal was led into the dark courtyard where the truck from the Gestapo prison stood waiting, he took out a small razor blade that he'd kept concealed in his cuff for such a moment.

"Get in, Kindchen, quick!" Waltke said.

With two fast movements, Wiesenthal cut both wrists.

Thereafter, according to his memoirs, Wiesenthal is committed to the prison hospital, where two more suicide attempts fail. There he is restored to health with "a special diet of strong soups, liver, and vegetables" prescribed by the solicitous sadist Waltke so that he can get on with his "interrogation" all the more quickly.

If Wiesenthal's memoirs and his interrogation in 1948 represent the truth accurately, this interrogation never took place, which makes the following sentence in his 1954 reparations application all the more interesting: "There [in the Lacki Gestapo prison] I was fearfully tortured by Unterscharführer Waltke and to put an end to these tortures, I cut open my veins" ("Dort wurde ich vom Unterscharführer Waldtke [sic] furchtbar gefoltert und um diese Folterungen ein Ende zu setzen, habe ich mir die Pulsadern aufgeschnitten").

How to account for the survival of a Jew caught with a gun and, to say the least, compromising documents? Is Wiesenthal's 1954 claim to have been tortured simply one more roccoco furbelow on his story
of persecution, or do his other two accounts suppress an actual event which might have resulted in Wiesenthal's having been "turned," and thus spared as a Gestapo agent? (One can speculate on what might have been Wiesenthal's fate had he escaped once more to his alleged partisan unit and been trapped in such contradictions about his treatment in the hands of the German secret police.)

"I Didn't Wish to Die . . ."

Wiesenthal's 1954 story of his recovery from his suicide attempt and his evacuation from Lvov in July 1944 is short and simple. After his torture by Waltke:

Although it was somewhat unusual, I was admitted to the prison hospital and was delivered on March 19, 1944 to the Lemberg [Lvov] Concentration Camp, which was just being established. There were in all about 100 inmates and a larger camp guard, which, under the leadership of Hauptsturmführer Warzok, preferred not to go to the front. In the camp I carried out small tasks for the camp command and the camp kitchen until July 19, 1944.

On July 19, 1944—it was about 10 days before the Russian entry into Lvov—the camp was evacuated . . .

This dry account omits a dramatic incident recounted in both Wiesenthal's memoirs and in his 1948 interrogation, whereby the "Nazin-hunter narrowly escaped execution thanks to a providential Soviet aerial attack.

According to The Murderers Among Us, Wiesenthal was to be tortured at last by the fiendish Waltke on July 17, on which day he and the other prisoners were summoned to the prison courtyard. There Wiesenthal was assigned to a group of non-Jews slated for execution. Wiesenthal describes what happened next as follows:

"We were probably going to be buried in a large mass grave," Wiesenthal remembers. "I looked at the others the way some people on an airplane look at their fellow travelers. If there should be a crash, they are thinking, these will be one's companions in death. On the other side of the courtyard I saw a group of Jews. I wished I could be buried with them, not with the Poles and Ukrainians, but how could I get there? Suddenly there was a roar in the sky above us, and an explosion shook the courtyard. From Sapieha Street a cloud of fire and smoke went up into the air. The files from the tables were scattered all
over the courtyard, and there was terrific confusion. I quickly ran across the courtyard and joined the Jews. A minute later two SS men put us on a truck and brought us back to the Janowska [i.e., Lemberg] concentration camp."

Herewith the same incident in his sworn statements of 1948:

On July 20 I was to be released from the prison hospital. We were taken to the prison yard, where the entire Gestapo and the SS and Police-Leader of Galicia were. They sorted us out according to the crime[s] we were charged with. In this way I was immediately selected for death, as a partisan chief . . .

On the same day on which we stood in the yard, 11 o'clock in the morning, where unexpectedly there was a Soviet attack and some bombs fell, there arose confusion and a cloud of dust of about 200 meters [in height?]. The Gestapo gentlemen ran away immediately and a small group stood there. I didn't wish to die and exploited this confusion and ran the 20 steps to this Jewish group. We were all driven once again into the jail and I together with this group. Then there was an air alarm. An auto with sirens was driven around for this purpose. After an hour there was again an all-clear. Then it was, Jews out. A car came from Lemberg Concentration Camp to pick up the Jews.

For what it's worth, then, Simon Wiesenthal's sworn testimony of 1948 is that he was saved because he was a Jew as late as July 1944!

Conclusions

A sustained comparison of his several accounts of his evacuation westward, all of them differing in numerous particulars, will not be undertaken here. The purpose of this brief study has been to make an internal criticism of Wiesenthal's credibility on his war years as reflected in several authoritative accounts he has provided of them, two of them sworn documents and the other his published memoirs.

The evident fact that Wiesenthal has more than once altered his
story of the six most important years of his life must be considered in connection with his credibility as a “Nazi”-hunter. The ongoing and intensifying hunt for World-War-II criminals (so long as they were Germans, or German allies, accused of mistreating Jews or Communists) has brought to grief more than one man unable to account for what he was doing, in minute detail, forty-five years ago. Thus John Demjanjuk, whose inability to remember in precisely which prison camp or holding pen he was held in at any given date contributed to his framing as “Ivan the Terrible” in Jerusalem. So Frank Walus, the wartime forced laborer from Poland whom Wiesenthal claimed to have documented as a member of the Gestapo until such humanitarians as Jerome Brentar of Cleveland were able to unearth insurance records which proved otherwise. It is time that competent authorities, in the United States and elsewhere, made a determined effort to establish the facts of Simon Wiesenthal's wartime career, by whatever means necessary. It is suggested that this time, if Mr. Wiesenthal is deposed under oath, appropriate penalties be imposed for deliberate misstatements.

Notes

1. The Wiesenthal interrogation is contained on one of the 91 rolls at the Archives entitled “Records of the U.S. Nuernberg War Crimes Trials Interrogations, 1946-1949” (Copy 1019, No. 79). These 91 rolls contain nearly 15,000 pretrial interrogation transcripts of over 2,250 individuals, conducted by the Interrogation Branch of the Evidence Division of the Office, Chief of Counsel for War Crimes (OCCWC). The orthography of the transcript, which among other things indicates the umlaut with the letter “e” rather than by the dieresis, has been followed above.

2. This statement, “Eidesstattliche Erklärung über die Zeit meiner Verfolgung,” has been published in Simon Wiesenthal: Dokumentation, by Robert Drechsler, Vienna: Dokumente zur Zeitgeschichte, 1/1982 (July, 1982). Drechsler's account of Wiesenthal's life presents much useful information, particularly in regard to Wiesenthal's sustained legal squabbles with Bruno Kreisky and others, including Drechsler himself. The document cited was submitted to the “State Pension Board” (Landesrentenbehörde in Düsseldorf (North Rhine-Westphalia), is dated August 24, 1954, and bears Wiesenthal's address in Linz, Austria.

3. The Murderers Among Us: The Simon Wiesenthal Memoirs by Simon Wiesenthal (edited and with an introductory profile by Joseph Wechsberg, New York; Bantam Books, third printing, 1973. Following the usage in the title, we have referred to this book as Wiesenthal's "memoirs"; purists might style it his "authorized biography." Perhaps it could be said to lie somewhere between the two genres.

4. The Murderers Among Us, p. 25.
6. According to historian Richard C. Lucas, at the time of the Soviet occupation of eastern Poland in 1939, "Jews in cities and towns displayed Red flags to welcome Soviet troops, helped to disarm Polish soldiers, and filled administrative positions in Soviet-occupied Poland . . . The Soviets with Jewish help shipped off the Polish intelligentsia to the depths of the Soviet Union. Some monasteries and convents were turned over to the Jews." The Forgotten Holocaust, Lexington, Ky.: The University Press of Kentucky, 1986, p. 128. The new rulers of Lvov and their Jewish helpers were just as unwelcome to the city's Ukrainians.
7. The Murderers Among Us, p. 28f.
8. The Murderers Among Us, p. 29.
11. The Murderers Among Us, pp. 33ff.
18. The Murderers Among Us, p. 35.
20. The Murderers Among Us, p. 35.
23. The Murderers Among Us, p. 36f.

[Copies of Wiesenthal's secret 1948 interrogation, together with an English translation, may be obtained from IHR, 1822½ Newport Blvd., Suite 191, Costa Mesa, CA 92627, for $15.00.]
Dr. Karl Otto Braun:  
A Memorial Tribute

MARK WEBER

Dr. Karl Otto Braun—German diplomat, businessman and Revisionist historian—passed away in Munich on 21 August 1988, shortly before his 78th birthday. He is also remembered as an uncommonly decent and honorable man. He is survived by his wife, Elisabeth, and two daughters. The eldest, Monica, gave birth to his first grandchild, a girl, in late 1987.

Dr. Braun was born on 31 August 1910 in Wolnzach, Bavaria, the son of a physician. Young Karl Otto received his secondary education at the prestigious Wilhelmsgymnasium in Munich and the humanistic Gymnasium in Coburg.

He studied English, history, geography and international law at the universities of Munich, London and Berlin, including study under the great historian Dr. Karl Alexander von Müller in Munich. Braun's special areas of emphasis were Manchuria, the League of Nations and the works of Shakespeare. After receiving his Dr. phil. (Ph.D.) in 1935, he studied Japanese at the University of Berlin's center for oriental languages. (He also spoke English, Italian, Spanish and French.)

He received a year of training for the diplomatic service at the German Foreign Office in Berlin, and then, from 1938 to November 1940, he served in Japan as a cultural attaché with the German embassy in Tokyo and as an economic affairs Vice Consul with the German Consulate General in Osaka. From 1941 until the end of the Second World War he was with the East Asia section of the Political Department of the German Foreign Office in Berlin. During the final two years of the war, he headed the section. During that terrible period, he also lost his brother, Major Wilhelm Braun, who was killed in action in Poland in July 1944.

In the aftermath of the war, all former German officials with university degrees were subject to "automatic arrest" under the provision of the notorious U.S. occupation directives JCS 1067,
regardless of whether or not they had been members of the National Socialist Party. Dr. Braun was accordingly seized by American occupation forces in 1945 and interned at the Dachau concentration camp, which was then run by U.S. authorities. He escaped in the fall of 1946, in part to avoid being forced to testify against his former colleagues. (A common American practice at the time was to coerce former German officials into testifying against their former colleagues by threatening to turn them over to the Soviets.)

After the escape, he fled with his wife and infant daughter to South Tyrol, the ethnically German region of northern Italy, where he worked for two years as a journalist. He then moved to Argentina where he worked in Buenos Aires for the German steel industry as an independent merchant, 1948-1954. He returned to Germany where he was employed by major steel corporations until his retirement in 1975.

Dr. Braun devoted the final years of his life to historical research and writing, with a special emphasis on American foreign policy towards Germany and Japan under Presidents Woodrow Wilson and Franklin Roosevelt.

As a conscientious scholar, Dr. Braun combined a devotion to truth and justice with careful attention to accuracy and detail. His firm belief in the ultimate triumph of historical truth, was reflected in a Latin phrase he often quoted: "Veritas magna est et praevalebit."

Dr. Braun's work on behalf of historical justice for Germany was rooted in an abiding devotion to the heritage and culture of his people. His search for historical truth was also motivated by a heart-felt concern for world peace and international harmony.

Although he served as an important official in a government which was at war with the United States, Dr. Braun had a genuine regard for America's welfare and long-term interests. He was very troubled, for example, by the threat posed by Zionist power and influence to America's national integrity and basic values.

Like so many others of the postwar generation, I learned a great deal from anecdotes of his diplomatic career. For example, he described Hitler's historic speech to the Reichstag on the afternoon of 11 December 1941, four days after Pearl Harbor. Sitting next to Rudolf von Ribbentrop, the son of the Reich Foreign Minister, he watched as Hitler recounted the reasons for the outbreak of war and the decision to strike against the Soviet Union, reviewed the dramatic course of the war thus far, and then explained why Germany was joining with Japan in war against the United States.

Dr. Braun told about his meeting in Berlin with the legendary Indian nationalist Subhas Chandra Bose, and his role in arranging Bose's dramatic submarine voyage from Europe to Asia.

Although he played no role in Germany's wartime Jewish policy, Dr. Braun told what he knew about the so-called "final solution"
policy, based on his conversations with Dr. Georg Leibbrandt, a friend who has represented the Reich East Ministry at the Wannsee conference of January 1942, where the "final solution" policy was coordinated. The two men had known each other since 1934. After the war, Leibbrandt emphatically told Braun in private that the "final solution" had been a policy, not of extermination, but rather of deportation to the occupied eastern territories. (This assessment is also abundantly confirmed by other evidence, including detailed German records found after the war.)

During the final decade of his life, Dr. Braun authored numerous historical essays and reviews, which appeared in a variety of West German publication, as well as a book, Pearl Harbor in neuer Sicht ("A new view of Pearl Harbor"), which was published by the respected publishing firms of Ullstein and Herbig.

Dr. Braun also translated a number of essays from English into German. For example, he translated and skillfully condensed an important essay by Tyler Kent, along with my introduction, from The Journal of Historical Review (Summer 1983) for publication in the German monthly Nation Europa, February 1984. In the same issue of Nation Europa was his translation of a presentation by Leon Degrelle from The Journal of Historical Review (Fall 1982). He also translated former U.S. Congressman Hamilton Fish's book FPR: The Other Side of the Coin, for which he also provided a foreword and footnotes for the German edition published in 1982.

Dr. Braun remained productive until the end. Even during his final days in the Munich hospital where he died, he worked on a translation of an American book about Franklin Roosevelt and Wall Street, a task which his youngest daughter has pledged to complete.

Dr. Braun was a good friend and supporter of the Institute for Historical Review. His first contribution to The Journal of Historical Review (Winter 1984) was a essay on the legacy of the policies of Woodrow Wilson and Franklin Roosevelt on Europe. He was a guest speaker at two IHR conferences. His first presentation was an informative and partially autobiographical address, "Reflections on German and American Foreign Policy, 1933-1945," to the February 1985 conference, which appeared in the Spring 1985 issue of The Journal of Historical Review.

His younger daughter, Sabine, accompanied him to the October 1987 IHR Conference, where he spoke about Richard Sorge, the Soviet master spy who obtained tremendously important secrets for the Kremlin from the German embassy in Tokyo while working as the Japan correspondent of the Frankfurter Zeitung newspaper. Braun knew Sorge during his posting in Tokyo.

In spite of a serious physical disability, Dr. Braun was also an active outdoorsman and mountain climber who scaled several of Europe's highest peaks.
Both in person and in his correspondence, Karl Otto Braun was invariably kind, tactful and encouraging. He patiently and selflessly encouraged many others during the final decade of his life, and it gave him great pleasure to know younger men and women who would carry on the work that was so dear to his heart. He will be remembered with admiration and affection.

Dr. Braun's character and spirit were manifest in his address to the 1985 IHR conference. Each Revisionist historian, he said, must . . . weigh his words carefully, must maintain a sense of balance and, about all, must stick to the facts. Revisionism has a mission. It is to find facts. Historical fact-finding has a purifying effect because it embodies the struggle for truth . . . Nations should promote a regard for history, thereby strengthening their memory and power.

The dawn of another Renaissance is approaching! Believe me: Moral values have a more enduring life than shrewd tactics! If we stoop to the level of Marxist lies and self-deception, as Franklin Roosevelt did, we fall into the hands of our more cunning enemies; whereas if we keep ourselves on a morally elevated plane, we will emerge victorious. When all is said and done, our blue shining planet, our universe, is in the hands of God . . .

The Strange Life of Ilya Ehrenburg

MARK WEBER

Ilya Ehrenburg, the leading Soviet propagandist of the Second World War, was a contradictory figure. A recent article in the weekly Canadian Jewish News sheds new light on the life of this "man of a thousand masks."

Ehrenburg was born in 1891 in Kiev to a non-religious Jewish family. In 1908 he fled Tsarist Russia because of his revolutionary activities.

Although he returned to visit after the Bolshevik revolution, he continued to live abroad, including many years in Paris, and did not settle in the Soviet Union until 1941.

A prolific writer, Ehrenburg was the author of almost 30 books. The central figure of one novel, The Stormy Life of Lazik Roitschwantz, is a pathetic "luftmensch," a recurring character in Jewish literature who seems to live "from the air" without visible means of support.
As a Jew and a dedicated Communist, Ehrenburg was a relentless enemy of German National Socialism. During the Second World War, he was a leading member of the Soviet-sponsored Jewish Anti-Fascist Committee.

(At fund-raising rallies in the United States for the Soviet war effort, two leading members of the Committee displayed bars of soap allegedly manufactured by the Germans from the corpses of murdered Jews.)

Ehrenburg is perhaps most infamous for his viciously anti-German wartime propaganda. In the words of the Canadian Jewish News: "As the leading Soviet journalist during World War II, Ehrenburg's writings against the German invaders were circulated among millions of Soviet soldiers."

His articles appeared regularly in Pravda, Izvestia, the Soviet military daily, Krasnaya Zvezda ("Red Star"), and in numerous leaflets distributed to troops at the front.

In one leaflet headlined "Kill," Ehrenburg incited Soviet soldiers to treat Germans as sub-human. The final paragraph concludes:

The Germans are not human beings. From now on the word German means to use the most terrible oath. From now on the word German strikes us to the quick. We shall not speak any more. We shall not get excited. We shall kill. If you have not killed at least one German a day, you have wasted that day . . . If you cannot kill your German with a bullet, kill him with your bayonet. If there is calm on your part of the front, or if you are waiting for the fighting, kill a German in the meantime. If you leave a German alive, the German will hang a Russian and rape a Russian woman. If you kill one German, kill another—there is nothing more amusing for us than a heap of German corpses. Do not count days, do not count kilometers. Count only the number of Germans killed by you. Kill the German—that is your grandmother's request. Kill the German—that is your child's prayer. Kill the German—that is your motherland's loud request. Do not miss. Do not let through. Kill.²

Ehrenburg's incendiary writings certainly contributed in no small measure to the orgy of murder and rape by Soviet soldiers against German civilians.

Until his death in 1967, "his support for the Soviet state, and for Stalin, never wavered," the Canadian Jewish News notes. His loyalty and service were acknowledged in 1952 when he received the Stalin Prize.

In keeping with official Soviet policy, he publicly criticized Israel and Zionism.

The Canadian Jewish News further writes:

... the recent disclosure that Ehrenburg arranged to transfer his private archives to Jerusalem's Yad Vashem library and archive, while still alive, comes as a stunning revelation.
Historical News and Comment

The reason this information has come to light only now is that Ehrenburg agreed to transfer his archive on condition that the transfer, and his will, remain secret for 20 years after his death.

On Dec. 11 [1987], with the 20-year period expired, Israel's daily Maariv related Ehrenburg's story . . ."

The collection includes material about the important wartime Jewish partisan movement. Among the documents in the collection is one concerning a pogrom in Malakhovka, a village near Moscow, which took place in 1959.

This new revelation about one of the most influential figures of the Stalinist regime shows that, whatever he may have said for public consumption, Ehrenburg never privately disavowed Zionism or ever forgot his ancestry.

Notes

George Bernard Shaw’s Letter to the Editor, May, 1945

in Respect of the Irish Prime Minister’s Condolences on the News of Adolf Hitler’s Death

RONALD KLETT

When Shaw’s pamphlet “Common Sense About the War” appeared in late 1914,¹ some three and one-half months after the war had started, it raised an angry tempest in Britannia. Although it only stated (what after the war was well-nigh universally conceded to be true) that Germany was no more to blame for the war than were Britain and her allies, “G.B.S. became intensely unpopular [in Great Britain]. His plays were no longer performed. His appearance at any public function caused the instant departure of many of those present. Some of his friends disowned him.”²

About thirty years and six months later, when Shaw is almost 89 years old, he publicly expresses views just as outrageous to the prevailing orthodoxy. His letter to The Times, London, appears ten days after the Second World War officially ends in Europe. These
views are considered so shocking even today that, when, five or six years ago I searched in the several biographies of Shaws that I could find in a university library, I discovered no author who mentions the letter. The inspiration for it is the report that the Irish Prime Minister, Eamon de Valera, has visited the German Minister, at Dublin, to convey his condolences on the news of Adolf Hitler's death. This is Shaw's letter, published May 18, 1945, The Times, London, page 5, under the title "Eire and Hitler."

"The correctness of the Taoiseach's [Prime Minister's] action when the death of the head of the German State was reported has been vindicated by Commander MacDermott. But his letter does not cover the whole story. In 1943 the allies called upon the neutrals to deny asylum to Axis refugees, described for the occasion as war criminals. Portugal refused. The rest took it lying down, except Mr. de Valera. He replied that Eire reserved the right to give asylum when justice, charity, or the honor or interest of the nation required it. That is what all the neutrals ought to have said; and Miss Hinkson, as an Irishwoman, will, on second thoughts, be as proud of it as I am. The voice of the Irish gentleman and Spanish grandee was a welcome relief from the chorus of retaliatory rancor and self-righteousness then deafening us.

"I have not always agreed with the Taoiseach's policy. Before the ink was dry on the treaty which established the Irish Free State I said that if England went to war she would have to reoccupy Ireland militarily, and fortify her ports. When this forecast came to the proof the Taoiseach nailed his colors to the top gallant, declaring that with his little army of 50,000 Irishmen he would fight any and every invader, even if England, Germany, and the United States attacked him simultaneously from all quarters, which then seemed a possible result of his attitude. And he got away with it triumphantly, saved, as Mr. Churchill has just pointed out, by the abhorred partition which gave the allies a foothold on Ireland, and by the folly of the Führer in making for Moscow instead of for Galway [a county of Ireland].

"Later on I hazarded the conjecture that Adolf Hitler would end in the Dublin Viceregal Lodge, like Louis Napoleon in Chislehurst and the Kaiser [Wilhelm II] in Doorn. If the report of the Führer's death proves unfounded this is still a possibility.

"It all sounds like an act from Victor Hugo's Hernani, rather than a page of modern world-war history; but Eamon de Valera comes out of it as a champion of the Christian chivalry we are all pretending to admire. Let us recognize a noble heart even if we must sometimes question its worldly wisdom.

"Faithfully,

"May 15. G. Bernard Shaw."
The letter reminds me of the words that Shaw forty-one years earlier, in his play John Bull's Other Island, Act II, put into the mouth of his character Peter Keegan: "My way of joking is to tell the truth. It's the funniest joke in the world."

Notes

3. The New York Times prints this letter, May 19, 1945, p. 6, under the title "Shaw Hails de Valera for Mourning Hitler; Sees Dublin as Haven if Führer Is Alive"; but the Associated Press news story omits part of one sentence and the whole of another, without troubling to inform the reader; and changes punctuation, capitalization, and paragraphing.

5. Pamela Hinkson, London, whose letter, protesting de Valera's act, appears the same day and page as Commander MacDermott's. She identifies herself in the letter as Irish.
About the Contributors

FRIEDRICH PAUL BERG is a mechanical engineer by profession. He received his B.S. in 1956 from the Columbia University School of Mines. He has worked as a technical writer and environmental consultant in the New York City area. For several years he has devoted himself to studying the possibility, from a technical standpoint, of the mass gassings alleged in the Holocaust story.

RONALD KLETT is a free lance writer and translator.

ROBERT FAURISSON is Associate Professor of French Literature at the University of Lyon-2 in France. He specializes in the appraisal and evaluation of texts and documents. A frequent contributor to The Journal of Historical Review, Professor Faurisson has published numerous articles and books, including Is the Diary of Anne Frank Genuine? and Réponse à Pierre Vidal-Naquet.

CHARLES E. WEBER, who earned his Ph.D. in German literature at the University of Cincinnati (1954), has taught at Cincinnati, the University of Missouri, the University of Tulsa, and Louisiana State University. The author of The 'Holocaust': 120 Questions and Answers, Dr. Weber is the chairman of the Committee for Reëxamination of the History of the Second World War and the editor of its Bulletin.

MARK WEBER studied history at the University of Illinois (Chicago), the University of Munich, Portland State University (B.A., 1976), and Indiana University (M.A., 1977). He has published many articles on Revisionist subjects in The Journal of Historical Review and elsewhere, and is currently working on a major Revisionist study of the Holocaust story.
